Contents

Preface *xv*

1 Freeze-Drying of Parenteral Drug Products and Vaccines *1*
Geoff Smith
1.1 Introduction *1*
1.2 Freeze-Drying—An Overview *2*
1.3 Product Formulation *5*
1.3.1 Understanding the Drug Substance *5*
1.3.2 Excipients in Freeze-Dried Drug Product Development *5*
1.4 Freeze Dryer Components *6*
1.4.1 The Vacuum System *9*
1.4.2 The Condenser *10*
1.5 Standard Process Instrumentation *11*
1.5.1 Product Probes *11*
1.5.2 Pressure Gauges *12*
1.6 Operational Parameters *12*
1.7 Process Parameters *13*
1.8 Designing the Freezing Stage *14*
1.8.1 Cooling Ramp and Process of Ice Formation *14*
1.8.2 Critical Temperatures *16*
1.8.3 Set Shelf Temperature *18*
1.8.4 Holding Period *19*
1.8.5 Annealing *20*
1.9 Designing the Primary Drying Stage *20*
1.10 Designing the Secondary Drying Stage *27*
1.11 Process Modeling and Process Analytical Technologies *28*
1.11.1 Phase Diagram Pressure–Temperature Curve *28*
1.11.2 Pressure Rise Test (PRT) *29*
1.11.3 Drying Rate Model *30*
1.11.4 Pressure Rise Modeling *32*
1.11.5 Tunable Diode Laser Adsorption Spectroscopy *33*
1.12 Optical and Spectroscopic PAT Tools *33*
References *36*

2 Standard PAT Instrumentation: Temperature Sensors *45*
Geoff Smith
2.1 Introduction *45*
2.2 Resistance Temperature Detector (RTD) *46*
2.2.1 Sensing Materials *47*
2.2.2 Connecting Wires *49*
2.2.3 Applications *51*
2.3 Thermocouples *52*
2.3.1 Thermocouple Calibration *53*
2.3.2 Thermocouple Guides *57*
2.4 Summary Comparison Between RTDs and TCs *57*
2.5 American Wire Gauge *58*
2.6 Wireless Temperature Sensors *59*
2.7 Temperature Measurements – Best Practice *61*
2.8 Disadvantages and Drawbacks of Product Probes *62*
2.9 Calibration Methods *62*
2.9.1 Fixed-Point Calibration *62*
2.9.2 Comparison Calibration *63*
2.10 Applications of Temperature Sensors in Freeze-Drying *63*
2.11 Limitations of Product Temperature Sensors *64*
2.12 Future Outlook *64*
References *65*

3 Standard PAT Instrumentation: Pressure Gauges and Vapor Pressure Sensors *69*
Geoff Smith, Georg Frinke, Robin Farley, and Ahmet Orun
3.1 Gas Pressure *69*
3.2 Units of Gas Pressure *70*
3.3 Measurement of Pressure *71*
3.4 Overview of Pressure Sensor Types *72*
3.4.1 Capacitive Pressure Measurement *73*
3.4.2 Capacitive Pressure Sensor *74*
3.4.3 Capacitive Vacuum Sensor *75*
3.4.4 Pirani Vacuum Sensor *76*
3.5 Calibrating Pressure Sensors *79*
3.6 Pressure Voltage Relationships *82*
3.7 Pressure Control Techniques *84*
3.8 Instrumental Configuration *84*
3.9 Pressure Control for Ice Nucleation *85*
3.10 Comparative Pressure Measurement *86*
3.11 Water Vapor Pressure *86*
3.12 Dynamic Equilibria *88*
3.12.1 Escape Tendency (Fugacity) and Evaporation *89*
3.12.2 Dalton's Law of Partial Pressures *89*
3.12.3 Dew/Frost Point *90*

3.12.4 Partial Pressure and Relative Humidity (RH) *90*
3.12.5 Vapor Pressure and Temperature *91*
3.12.6 The Clapeyron Equation *91*
3.12.7 Clausius–Clapeyron Equation *93*
3.13 Application of the Clausius–Clapeyron in FD *94*
3.13.1 Empirical Relationships *96*
3.14 Colligative Properties *99*
3.14.1 Lowering of Vapor Pressure *101*
3.15 Measurement of Water Vapor Pressure *102*
3.15.1 Chilled-Mirror Hygrometer (CMH) *102*
3.15.2 Dew-Point Sensors (DPS) *104*
3.15.3 Spectroscopic Hygrometers (SH) *108*
3.15.3.1 Tunable Diode Laser Absorption Spectroscopy (TDLAS) *108*
3.15.3.2 Cavity Ring Down Spectrometers (CRDS) *108*
3.15.3.3 Cavity-Enhanced (Frequency Modulation) Spectrometer (CEFMS) *109*
3.16 Calibration of Water Vapor Measurements *109*
3.16.1 Mixed Flow Water Vapor Calibration Systems *109*
3.16.2 Pressure and Temperature-Based Water Vapor Calibration Systems *110*
3.17 Conclusion *111*
References *112*

4 Wireless Sensor Networks for Lyophilization *119*
Jesus Meza-Galvan, Andrew Strongrich, Ahmad Darwish, Dimitrios Peroulis, and Alina Alexeenko
4.1 Introduction *119*
4.1.1 Overview of Wireless Sensor Applications *119*
4.1.2 General Overview of Wireless Sensor Platforms *120*
4.1.3 Conventional Lyophilization Process Monitoring *122*
4.2 Existing Wireless Sensors of Lyophilization *124*
4.2.1 Wireless Temperature Sensors *124*
4.2.2 Wireless Pressure Sensors *128*
4.2.3 Wireless Vial Strain Sensors *131*
4.2.4 Wireless Sensor for Rapid Depressurization-Controlled Ice Nucleation *135*
4.3 Prospective Wireless Sensor Concepts for Freeze-Drying *138*
4.3.1 Existing Wireless Sensors with Unrealized Implementations *139*
4.3.2 Optical Sensors *139*
4.4 Conclusion *141*
References *142*

5 Monitoring Methods Based on the Measure of the Sublimation Flow: Pressure Rise Test and Other Direct Technologies *145*
Antonello Barresi, Roberto Pisano, and Davide Fissore
5.1 Introduction *145*
5.2 Classic Pressure Rise Methods for Monitoring *146*

5.2.1 Manometric Temperature Measurement *148*
5.2.2 Pressure Rise Analysis *150*
5.2.3 Dynamic Parameters Estimation *151*
5.2.4 Analysis and Comparison of MTM, PRA, and DPE Algorithms *154*
5.2.5 Simplified DPE Method for Short PRT Duration *160*
5.3 Improvements and Modifications of the DPE Algorithm *161*
5.3.1 Development of a Modified DPE Algorithm for Heterogeneous Batches *161*
5.3.2 Improving Robustness: The DPE^{+} Algorithm *163*
5.3.3 Use of DPE Algorithm in the Presence of Cosolvents *165*
5.3.4 Use of DPE for Monitoring Lyophilization in Tray and with Radiating Energy: The DPE^{++} Algorithm *167*
5.3.5 Influence of Pressure Sensor Dynamics in Monitoring Large Batches: the DPE^{3+} Algorithm *169*
5.4 Methods Based on Direct Sublimation Flow Measurements *172*
5.4.1 TDLAS *172*
5.4.2 Other Approaches: PDT and Valveless Systems *173*
5.4.2.1 Pressure Decrease Test (PDT) *173*
5.4.2.2 Valveless Monitoring System (VMS) *174*
5.5 Estimation of End of Primary Drying *175*
5.6 Estimation of Residual Moisture Content *177*
5.7 Use of PRT for Process Control and Optimization *179*
List of Symbols *182*
Subscripts and Superscripts *184*
Greeks *184*
Abbreviations *185*
References *185*

6 Spectroscopic-Based PAT in Freeze-Drying *193*
Ambra Massei, Nunzia Falco, and Davide Fissore
6.1 The Emerging Role of Spectroscopic Techniques in Biopharmaceuticals *193*
6.1.1 Fundamentals of NIR Theory *194*
6.1.2 NIR Spectroscopy in Pharmaceutical Field *196*
6.1.3 Fundamentals of Raman Theory *197*
6.1.4 Raman Spectroscopy in Pharmaceutical Field *199*
6.2 Data Analysis: How to Interpret Spectra? *200*
6.2.1 Preprocessing Techniques *202*
6.2.2 Exploratory Data Analysis: Principal Component Analysis (PCA) *203*
6.2.3 Regression Modelling *204*
6.2.3.1 Partial Least Squares Regression: Theory *204*
6.2.3.2 Artificial Neural Network: Theory *205*
6.2.4 Classification Modelling *206*
6.2.4.1 Partial Least Squares Discriminant Analysis: Theory *206*
6.2.5 Performance Evaluation *207*

6.3 Applications of NIR and Raman Spectroscopy *208*
6.3.1 At-Line NIR Spectroscopy Application *208*
6.3.2 In-Line NIR Spectroscopy Application *210*
6.3.3 At-Line Raman Spectroscopy Application *212*
6.3.4 In-Line Raman Spectroscopy Application *214*
6.4 Conclusions *217*
List of Symbols *217*
References *218*

7 An Introduction to Through-Vial Impedance Spectroscopy (TVIS) *223*
Geoff Smith
7.1 Introduction *223*
7.2 Description of the Current TVIS System *227*
7.2.1 TVIS Electrode System *227*
7.2.2 Fill Volume Considerations *231*
7.2.3 Noninvasive Temperature Measurement *232*
7.2.4 Cables and Connectors *232*
7.2.5 Junction Box *232*
7.2.6 Feedthrough Plate – Electrical Connections *234*
7.2.7 External Ports on a Freeze-Dryer *235*
7.2.8 TVIS Feedthrough Adapters for Different Freeze Dryers *239*
7.3 TVIS – Principles of Operation *242*
7.4 An Impedance Model for the TVIS Vial *243*
7.5 Applications to Freeze-Drying *244*
7.5.1 The Ice Formation Process *246*
7.5.2 Glass Transitions and Phase Behavior (Devitrification) *247*
7.5.3 Annealing *249*
7.5.4 Glass-Wall Effects *250*
7.5.5 Extraction of Critical Process Parameters *250*
7.5.6 Secondary Drying *250*
7.6 TVIS Development History *251*
7.A Fundamentals of Impedance Spectroscopy *251*
7.A.1 Resistance vs. Conductance and Impedance vs. Admittance *252*
7.A.2 Capacitive Reactance: The Electrical Impedance of a Capacitor *253*
7.A.3 Complex Capacitance *255*
References *257*

8 An Application for Through-Vial Impedance Spectroscopy (TVIS) in Modeling of the Ice Sublimation Process *261*
Geoff Smith
8.1 Introduction *261*
8.2 Measured Parameters *262*
8.3 Predicted Parameters *263*
8.4 Challenges with Drying Rate Determinations *265*

8.5 An Alternative Approach *267*
8.6 The Sensing "Point" for TVIS-Based Temperature Measurements *268*
8.7 Experimental System for Temperature Calibration *270*
8.8 Temperature Calibration of log F_{PEAK} *272*
8.9 Prediction of the $T_{F_{PEAK}}$ Values in Primary Drying *276*
8.10 Temperature Compensation of C''_{PEAK} *277*
8.11 $\widehat{C}''_{PEAK}$ and Drying Rate Predictions *279*
8.12 Critical Dimensions of the Frozen Solution *284*
8.12.1 Characteristic Features of the TVIS Vial *285*
8.12.2 Definition of the Geometric Features of the TVIS Vial *286*
8.12.3 Determination of the Height of the Frozen Solution *287*
8.13 Adjusting for Ice Mass Loss due to Sublimation *289*
8.14 Temperature Predictions at the Ice Base and the Ice Interface *289*
8.15 Determining Ice Vapor Pressure *290*
8.15.1 Empirical Equation for Ice Vapor Pressure *290*
8.15.2 Correction for Unfrozen Water Content *291*
8.16 Determination of the Dry-Layer Resistance *291*
8.17 Determination of the Heat Transfer Coefficient (K_v) *294*
8.A Equivalent Circuit Modeling *296*
8.B Height of the Liquid Meniscus *299*
8.C Transition from a Planar Ice Interfac *299*
8.D Methods to Determine the Height of the Apex of the Domed Base within the Vial *302*
8.E Onset of Sublimation *305*
References *307*

9 Multiplexing PAT for Qualitative Ice Sublimation Monitoring in Primary Drying *309*
Geoff Smith, Paul Matejtschuk, Pathum Wijesekara, and Kiran Malik
9.1 Introduction *309*
9.1.1 Direct Single-Vial Methods *311*
9.1.2 Indirect Single-Vial Methods *315*
9.1.3 End of Primary Drying – Batch Methods *320*
9.1.4 Primary Drying – Is Not Just Sublimation *322*
9.2 Through-Vial Impedance Spectroscopy (TVIS) *325*
9.2.1 Different Characteristic Shapes *326*
9.2.2 Numerical Prediction of TVIS Primary-Drying Endpoint *329*
9.3 Multiplexing TVIS with Pirani Gauge Measurements *331*
9.3.1 Modified Method for the Sublimation Endpoint for Front TVIS Vials *333*
9.3.2 Where Is the True Sublimation Endpoint on the Pirani Curve? *335*
9.3.3 Real-Time Monitoring and Early Estimates of the Primary-Drying Endpoint *335*
9.3.4 Statistical Significance *336*
9.3.5 Crystalline Freeze-Concentrates *337*

9.3.6 Amorphous Freeze-Concentrates *338*
9.3.7 Qualification of the Batch Ice Sublimation Endpoint from the Pirani Profile *338*
9.4 Conclusion *340*
9.A Endpoint-Defining Characteristics *340*
References *341*

10 Freeze-Drying Monitoring and Control Using Thermal Imaging *345*
Paola Casucci, Thomas De Beer, and Davide Fissore
10.1 Fundamentals of Infrared Radiation and Thermal Imaging *345*
10.1.1 Basic Principles *346*
10.1.2 Infrared Spectrum *347*
10.1.3 Temperature Measurement Through Thermal Imaging *347*
10.1.4 Components and Optical Materials of Infrared Cameras *348*
10.2 Application of IR Thermal Imaging to Monitor a Continuous Freeze-Drying Process *349*
10.2.1 Temperature, End of Primary Drying, and Product Resistance Monitoring *352*
10.2.2 Thermal Imaging Applications in Spin Freezing *356*
10.2.3 Implementation of a PAT-Based In-Line Control System *357*
10.3 Application of IR Thermal Imaging to Monitor a Batch Freeze-Drying Process *359*
10.3.1 Image Acquisition *361*
10.3.2 Primary Drying Monitoring in a Batch Process Using IR Thermal Imaging *361*
10.3.3 Freezing Monitoring in a Batch Process Using IR Thermal Imaging *363*
10.3.4 Process Control Using IR Thermal Imaging *364*
10.4 Benefits and Critical Issues *364*
List of Symbols *365*
Greeks *367*
References *367*

11 Emerging Technologies in Pharmaceutical Freeze-Drying *371*
Fiora Artusio, Antonello A. Barresi, and Roberto Pisano
11.1 Introduction *371*
11.2 Hybrid-Drying: Potential Role of Ultrasound and Infrared Heating in Lyophilization *372*
11.2.1 Ultrasound-Assisted Drying *373*
11.2.2 Infrared-Assisted Freeze-Drying *374*
11.3 Microwave-Assisted Freeze-Drying *375*
11.3.1 Principles of Microwave Technology in Drying *375*
11.3.2 Current Applications, Benefits, and Limitations of Microwave-Assisted Freeze-Drying *379*
11.3.2.1 Quality and Stability of the Product *380*

11.3.2.2 Uniformity of Batches *381*
11.3.2.3 Corona Effect *382*
11.3.2.4 Development of GMP Equipment *383*
11.3.2.5 Selection of Optimal MW Frequency *383*
11.3.2.6 In-Line Process Control *383*
11.3.3 Modelling Microwave-Assisted Freeze-Drying *384*
11.4 Thin-Film Freeze-Drying *385*
11.5 Continuous Freeze-Drying *385*
11.6 Continuous Freeze-Drying Technologies for Particle-Based Products *388*
11.7 Foam Drying *392*
11.7.1 Applications of Foam Drying in Pharmaceuticals *394*
11.7.2 Advantages of Foam Drying *394*
11.7.3 Disadvantages and Challenges *396*
11.7.4 Key Considerations *396*
11.8 Nonstandard Containers for Freeze-Drying *398*
11.8.1 Types of Containers Beyond the Traditional Glass Vial *398*
11.8.1.1 Plastic Vials *399*
11.8.1.2 Syringes *400*
11.8.1.3 Dual-Chamber Systems *400*
11.8.1.4 Blisters *400*
11.8.1.5 Protective Bags *400*
11.8.1.6 Bulk Containers *401*
11.8.1.7 Rack Systems *401*
11.8.2 Interactions Between Container and Dosage Form *401*
11.8.3 Container Closure Integrity *402*
11.9 Freeze-Drying of Oral Solids *403*
11.9.1 Considerations for Oral Solids Formulation *403*
11.9.2 Considerations for Oral Solids Freeze-Drying *404*
11.9.3 Case Studies of ODTs Produced via Freeze-Drying *404*
11.10 Application of AI and Digital Twins in Freeze-Drying *405*
11.10.1 Use of ML for Formulation Design *406*
11.10.2 Role of ML in Freeze-Drying Process Monitoring, Control, and Optimization *406*
11.10.3 Use of ML for Freeze-Dried Product Characterization *407*
11.10.4 Current State of the Implementation of AI/ML Technologies Within Pharmaceutical Process Models and Regulatory Considerations *408*
List of Symbols *409*
Greeks *409*
References *409*

12 Innovations in Control of Freezing in Pharmaceutical Processes *425*
Antonello A. Barresi
12.1 Introduction *425*
12.2 Ultrasound-Induced Ice Nucleation *425*

12.3 Vacuum-Induced Surface Freezing *428*
12.4 Other Controlled Nucleation Techniques *431*
12.4.1 Electrofreezing *431*
12.4.2 Nucleating Agents *431*
12.4.3 Ice Fog Technique *431*
12.4.4 Depressurization Method *432*
12.4.5 Burst of Cryogenic Gas *433*
12.5 Industrial Implementation of Controlled Nucleation Technologies *433*
12.6 Comparison of Performances of Different Controlled Nucleation Technologies *436*
12.7 Future Research Directions and Challenges *438*
List of Acronyms *439*
References *440*

Index *447*
