Administrative Measures for the Prevention of Pollution (MAPP) 165
Advanced Encryption Standards (AES) 76
African Battery initiatives 172–178
AI startups 113
artificial intelligence (AI) 12, 57, 71–72, 166, 182, 213
Asia-Pacific (APAC) region initiatives 180, 181, 198
Auto ID (Automatic Identification) 70
automaker and technology provider initiatives
  Siemens's Battery Passport 252–253
  Volvo's Battery Passport 252

b

Basel Convention 162, 192
battery-grid arbitrage 117
battery lifecycle management 107, 119, 163, 165–167, 170, 180–182, 188, 191–193
Battery Pass Battery Passport system 231
Battery Pass Closing Event 258–260
Battery Passport
  architecture design 231–232
  business models and economic implication 99–156
  China, Strategic Follower and System Integrator 28–30
  core components
    end-of-life and sustainability 10
    lifecycle and performance 8
    product identity 7–8
  data framework and functions 232–235
  demonstrator 235–236
  DIN DKE SPEC 99100 43–45
EU Battery Regulation (Regulation 2023/1542)
  battery waste management and producer responsibility 19
  DPPs and global frameworks integration 22
  driving circularity and sustainability 22–27
  end-of-life management 16
  end user liability 17
  end uses and applications 16–17
  hazardous substances restrictions 16
  labeling and collection requirements 16
  manufacturing liability and labelling 16
  producer responsibility organisations (PROs) 21–22
  recycled content targets 15–16
  regulatory leader and first-mover 27–28
  supply chain due diligence 17–19
global alignment, challenges and cooperation 31
global transformation 6–7
lifecycle blind spots and ESG failures 3–4
momentum and policy alignment 4–6
project briefing 230–231
regulatory and governance framework 12–14
solution 4
standards
  access rights, cybersecurity, and confidentiality 38–39
  Application Programming Interfaces (APIs) 42–43
  data authentication, reliability, and integrity 42
  data carriers linking physical batteries 36–37
  data processing, exchange protocols, and data formats 40–41

Battery Passport (*contd.*)
data storage, archiving, and persistence 42
supporting interoperability 39
for unique identifiers 34–35
system functionality
blockchain backbone and data integrity 12
circularity and resource efficiency 11
driving innovation and industry transformation 12
infrastructure for interoperability and expansion 12
policy alignment and consumer empowerment 11–12
technical infrastructure and digital backbone 12
traceability and transparency 10–11
technical system and policy experiment 263
technological infrastructure of 100
United States, fragmented but evolving 30–31
urgency and strategic context 2–3
Battery Pass Project 26, 44, 230–232, 235, 236, 259
big data 72–73, 114
blockchain technology 5, 44, 79, 113, 118, 139, 154, 248
Bluetooth communication 58–59
Brazil's National Solid Waste Policy (NSWP) 179–180
business models
data monetization 120
integrated service offerings 120
pay-per-use model 120
public–private partnerships (PPPs) 120–122
subscription model 119
business models and economic implication
business models for implementation 119–122
economic adaptation 149–156
financial incentives and support mechanisms 123–125
global trade 125–130
impact 99–119
stakeholders, economic risks for 130–149

C

Catena-X initiative
core technical capabilities 236–238
implementation path 238–241
open-source data ecosystem 236
cellular communication 57–58
China Automotive Technology & Research Center Co., Ltd. (CATARC) 248
China Battery ID 247, 248
example of 250–251
technical framework 248–250
China Electricity Council (CEC) 165
China Energy Storage Alliance (CNESA) 165
China's policy vision 163–167
circular economy 3–6, 8, 11, 12, 14, 19, 23–25, 28, 33, 37, 73, 89, 91, 100, 101, 103, 110, 111, 139, 142, 143, 145, 150, 155, 162, 163, 166, 167, 169, 178, 182, 188–191, 193, 194, 197, 204, 207, 209, 216, 219, 221, 225, 227, 230, 232, 233, 236, 242, 250, 253
Circular Economy Action Plan (CEAP) 22, 28
closed-loop recycling
collection and sorting 215
efficient battery recycling 217–219
enabling second-life applications 215–217
cloud architecture 59
cloud service providers 113
communication infrastructure
Bluetooth technology 58
cellular communication 57–58
cloud storage and data accessibility 59–61
data lifecycle management
data collected types 61–62
system functioning 62–66
Wi-Fi communication 58
Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) 176, 181, 182, 198
consumer behavior
battery passport awareness, engaging in 110
environmental benefits 109–110
shifts in 108–111
willingness to pay 109
core technical capabilities 236–238
core technological components
data loggers and edge analytics 56
real-time monitoring systems 53–55
RFID and QR code integration 51–53
smart sensors and IoT networks 49–51
cost–benefit analysis
consumers 147–149
manufacturers 147
recycling companies 149
cybersecurity and privacy
addressing privacy concerns 78
blockchain for 75

consensus mechanism 78
data access control 78–79
encryption 75–76
identity and access management 77–78
private blockchains 79–81
secure data transmission 76–77
secure storage through decentralization 77

d

Data Free Flow with Trust (DFFT) 242, 253
data lifecycle management
data collected types 61–62
system functioning 62–66
data loggers 49, 56, 61, 67, 69, 84, 89, 90
data monetization 120, 122, 155, 257
data science firms 113
data storage solutions 70–72
Dieselgate 134
digital Battery Passport 16, 19, 29, 30, 43, 118, 165, 166, 188, 213, 214, 217, 252
digital monitoring systems 151
Digital Product Passport (DPP) 4, 6, 52, 62, 69, 102, 111, 162, 231, 232, 259, 260
Digitizing Battery Lifecycle Management 165–166
DIN DKE SPEC 99100 14, 18, 43–45, 66, 258
distributed energy resource (DER) 117

e

Ecodesign for Sustainable Products Regulation (ESPR) 4–6, 22, 28, 111, 253
economic impact
consumer behavior, shifts in 108–111
evolving infrastructure needs 112–119
governments 127–128
key market drivers 102–108
manufacturers 127
recycling companies 128–130
stakeholder roles and relationships 99–102
economic risks for stakeholders
consumers and end users, risks for 138–140
cost–benefit analysis 147–149
government bodies, risks for 140–142
government incentives dependence 131–132
manufacturers, risk analysis for 132–138
new creation 130–132
over-regulation 131
recycling companies, risks for 143–147
regulatory uncertainty 131
edge analytics 56
edge computing 56, 57, 95, 112, 114
electric vehicles (EVs) 2, 50, 53, 57, 61, 62, 72, 85, 86, 90, 93, 102, 105, 145, 163, 210, 225, 258
producer 163, 199
end-of-life management 5, 10, 21, 69, 100, 103, 151, 192, 208–209, 253
end-of-life operators 262
energy-efficient algorithms 94
energy management 84–85, 117
environmental impact assessments 6, 161
environmental, social, and governance (ESG) 226
compliance 137–138
risks 3
EU Battery Regulation (Regulation 2023/1542) 3
battery waste management and producer responsibility 19
DPPs and global frameworks integration 22
driving circularity and sustainability 23–27
end-of-life management 16
end user liability 17
end uses and applications 16–17
hazardous substances restrictions 16
labeling and collection requirements 16
manufacturing liability and labelling 16–17
producer responsibility organisations (PROs) 21
recycled content targets 15–16
supply chain due diligence 17–19
European Union 1, 4, 11, 12, 22, 27, 28, 31, 69, 111, 123, 125, 126, 155, 161, 258
EU's Circular Economy Action Plan 22
evolving infrastructure needs
AI and machine learning, integration of 113
cybersecurity infrastructure 118–119
data center requirements and expansion 114–115
edge computing and 5G integration 114
enhanced security and transparency, blockchain for 113
IoT and sensors, advancements in 112
lifecycle management, big data analytics for 114
logistics and supply chain infrastructure 115–116
pilot programs and test facilities 117
regulatory and compliance frameworks 116–117
renewable energy system, integration 117

evolving infrastructure needs (*contd*.)
technology implementation facilities 115
workforce development and training centers 116
extended producer responsibility (EPR) 19, 162, 165, 166

f

Faraday Battery Challenge project 172, 177
financial incentives and support mechanisms
address risks 124–125
battery passport adoption, subsidies to promote 123
effective tax incentives, designing 123
government grants on battery adoption, impact of 124
grants and funding mechanisms 123–124
public–private partnerships (PPPs) 124
tax credits and subsidies 123
tax incentives 123
fragmentation and battery passport uptake
battery lifecycle management 191–193
regional trade agreements 194–195

g

General Data Protection Regulation (GDPR) 33, 57, 58, 76, 78, 79, 81, 85, 93, 139, 167, 195, 198, 259, 262
German Federal Ministry for Economic Affairs and Climate Action 44, 118, 124
Germany's Battery Pass 258
GHG accounting methods 229
Global Battery Alliance (GBA) 4, 26, 44, 154, 259, 263
MVP pilot 228–229
Proof of Concept (POC) Pilot 228
sustainability indicator framework and scoring logic 226–228
vision of 225
global fragmentation
African Battery initiatives 172–178
Asia-Pacific (APAC) region initiatives 180
China's policy vision 163–167
Latin American initiatives 178–180
North American vision 167–172
global trade
coordination, opportunities for 126
different barriers for 129
intellectual property considerations 126
nontariff barriers 125
economic impact of 125–126
policies coordination 126
trade agreements 126
trade regulations 125
world battery minerals trade 128
graphics processing units (GPUs) 114
green energy incentives 118
greenhouse gas (GHG) emissions 207–222, 227

h

hybrid blockchain models 93, 95

i

identity and access management (IAM) systems 77–78
Inflation Reduction Act (IRA) 30, 31, 194, 252
internal combustion engine (ICE) vehicles 164
International Electrotechnical Commission (IEC) 32, 150
International Energy Agency (IEA) 105

k

key market drivers
circular economy, shift towards 103
early adopters 107
electric vehicle sector 105
lithium-ion battery market 106–107
low-carbon solutions, shift towards 102–103
new market entrants, opportunities 107–108

l

Latin American initiatives 178–180
leveraging big data 72–73
lithium-ion battery 30, 72, 86, 89, 106–107, 112, 140, 143, 169, 178, 207, 210, 215, 221

m

Ministry of Economy, Trade and Industry (METI) 242
mitigating GHG emissions through supply chain transparency
battery lifecycle 210–214
encouraging sustainable sourcing 214–215
raw material extraction/processing and cell production 209–210
mutual recognition agreements (MRAs) 151

n

North American vision 167–172

o

Ouranos ecosystem
  concept of 243
  technical architecture of 242–247
Ouranos Ecosystem Data Space (ODS) 242–247
Overall Plan for the Construction of Digital China 247
overregulation 162–163, 261

p

pay-per-use model 120, 155–156
policy and regulatory framework
  compliance challenges 198–199
  ethical considerations in policymaking 196–198
  fragmentation and battery passport uptake
    battery lifecycle management 191–193
    regional trade agreements 194–195
  global fragmentation
    African Battery initiatives 172–178
    Asia-Pacific (APAC) region initiatives 180
    China's policy vision 163–167
    Latin American initiatives 178–180
    North American vision 167–172
  legal challenges 195–196
  policy developments 201–202
  value chain 199–201
policy fragmentation
  economic implications 186–188
  environmental and circular economy trade-offs 189
  global battery ecosystem 190
  political uncertainty and geopolitical risk 189–190
  technological and operational consequences 188–189
policy momentum 5
price sensitivity 138
private blockchains 79–81, 93, 113
project briefing 230–231
public–private partnerships (PPPs) 120–122, 124, 199, 257, 259

q

QR code 7, 16, 17, 19, 22, 35, 51–53, 70, 227, 238, 248, 252, 257
quality assurance (QA) processes 67, 115

r

Radio Frequency Identification (RFID) 35, 51–54
real-time carbon tracking 117
real-time monitoring systems 53–55
recycling process for energy transition minerals 147
regional trade agreements 181–186, 194–195
research and development (R&D) 12, 123–124, 210
risk analysis for manufacturers
  ESG compliance risks 137–138
  increased production costs 133
  infrastructure and capital risks 133–134
  market resistance 134
  mitigation strategies 138
  regulatory compliance 134–135
  supply chain risks 135–137
risks for consumers and end users
  data privacy concerns 138–139
  data security risks 139
  increased product costs 138
  supply chain data, trust issues 139–140
risks for government bodies
  economic value and job creation, impact on 141–142
  infrastructure investments 141
  market disruption 141
  mitigation strategies 142
  regulatory and compliance costs 140–141
risks for recycling companies
  increased operational costs 143
  market uncertainty and demand 145–146
  regulatory and compliance risks 144–145
  supply chain challenges 146

s

second-life applications 23, 30, 71, 166, 171, 177, 178, 215–217, 221, 259
secure data transmission 76–77, 85
Siemens's Battery Passport 252–253
small and medium-sized enterprises (SMEs) 32, 123, 132, 142, 150, 152, 162, 189, 196, 199, 203, 229, 257–262
smart sensors and IoT networks 49–51
Society 5.0 242
stakeholder roles and relationships
  battery manufacturers 100, 101
  end-of-life management 100, 101
  government and regulatory bodies 100, 101
  individual and corporate consumers 100, 101
  interconnected ecosystem 101–102
  recyclers 100, 101
  service providers 100, 101

strategic recommendations for economic adaptation
businesses 154–156
governments 149–154
supply chain due diligence 11, 17–19, 26, 32, 228, 230, 242, 253
system functionality
blockchain backbone and data integrity 12
circularity and resource efficiency 11
driving innovation and industry transformation 12
policy alignment and consumer empowerment 11–12
technical infrastructure and digital backbone 12
traceability and transparency 10–11
system functioning
data accuracy and reliability 66–70
data analysis techniques 72–74
data storage solutions 70–72
System of Systems (SoS) 242
