Index

Note: Page numbers followed by *t* refer to tables.

a

absorption of energy 3–4
acetals 135–136
acetylacetone 390
acid–base catalysis 70
acid-catalyzed aldol reactions 142–143
acidic hydrolysis 135, 137
acidity constant 32, 33*t*, 35*t*
acylation 60, 76, 168–170, 215
acyloin condensation 50
addition–elimination mechanism 98
addition reactions 117–118, 128, 202–203
aldehyde dithioacetal 43
aldol reactions 64–67, 77, 142–143
aliphatic diazo compounds 183–184, 229–230, 232
alkali metal carbonates 38
alkane oxidation 118
alkenes 113
  carbocations with 139–146
  electrophilic carbenes and 187–189
  halogen molecules addition to 128–129
  hydration of 131–132
  hydroboration reaction 193
  inorganic cations with 123–124
  mercuration of 133
  organic peracids with 193
  sulfenyl chlorides addition to 129–130
  uncharged electrophilic agents with 125, 193–194
alkoxyalkyl carbocations 117, 136
alkylating compounds 10, 13–16
  carbanions with 31–45
  inorganic anions with 17–23
  organic anions with charge on heteroatom with 27–30
  organometallic compounds with 45–46
  uncharged nucleophilic agents with 23–27
alkyl orthoacetates 244
allyl vinyl ethers 244–245
α-hydroxyalkyl radicals 215
α-tetralone 210
ambident anions 22–23, 30, 38–39, 56, 66–67
amide anion 54–55
amination 103, 107

anionic adducts 63–64, 74–76, 89, 103
elimination of hydroxide anion/water from 69–71
protonation of 64–67
transformations of 67–69, 74–76
Arbuzov reaction 25–26, 73
aromatic aldehydes 53, 55, 68, 70, 171
aromatic compounds 93–103, 113, 147–152
carbocations with 161–174
electrophilic carbenes with 189–190
inorganic electrophilic agents with 152–159
organic cations with charge on heteroatom with 178–179
uncharged electrophilic agents with 159–161
aryldiazonium cations 177, 212–213
aryldiazonium radicals 212
arylsulfonyl chlorides 178–179
autooxidation 209
aza-Cope rearrangement 247
azo coupling 179
azomethane 200
azomethine ylides 230, 235

b

basicity 13–14
Beckmann rearrangement 192
benzoic acid 155
benzophenone 173–174
benzyl chloride 22, 165
β-dialkylaminoethyl chloride 41
bimolecular nucleophilic substitution (S_N2) 15
Birch reduction 93
Bischler–Napieralski reaction 169
bond energies 3
borane 193–194
Bouveault–Blanc reaction 51
bromination 3, 158–159, 206–208
bromine radicals 217–220
bromoform 186
butadiene 223–228

c

C-alkylation 38–39, 41
Cannizzaro reaction 53, 66
caprolactam 192
carbanions 10
alkylating compounds with 31–45
amination of 107
carbonyl compounds with 62–78
compounds with electrophilic center on heteroatom with 107–109
electrophilic alkenes with 87–90
halogenation of 107–108
oxidation of 107
thioalkylation of 107
carbocations 112, 116–122
alkenes with 139–146
aromatic compounds with 161–174
heteroatom-stabilized. *see* heteroatom-stabilized carbocations
hydrocarbon. *see* hydrocarbon carbocations
inorganic anions with 127–131
p-electron donors with 131–139
carbon disulfide 59, 62
carbon radicals 217–220
carbonyl compounds 11, 49
carbanions with 62–78
inorganic anions with 50–56
organic anions with charge on heteroatom with 61–62
organometallic compounds with 78–81
uncharged nucleophilic agents with 56–61

carbonyl ene reactions 240–241
Carroll reaction 245
CH acids, 31–32, 33*t* 36–40, 42
chain reaction 200, 202–203
chain termination (ending) 202–203
chemical reactions 1–5
Chichibabin reaction 103
chlorination 206–208
chloroform 185–186
chloroketones 44
chloromethylaryl sulfones 43–44
chloromethylation 165–166
chlorosulfonation 161
Claisen condensation 51, 76, 78, 89
Claisen rearrangement 243–246
click chemistry 233
compounds with electrophilic center on heteroatom 11
  carbanions with 107–109
  inorganic anions with 105
  organic anions with charge on heteroatom with 106–107
  organometallic compounds with 109
  uncharged nucleophilic agents with 105–106
conjugation 34
coordinative interactions 5
Cope rearrangement 246–247
copper-organic compounds 46
Corey–Chaykovsky reaction 74
coupling reaction 34, 179
covalent carbon–metal bonds 46
Curtius reaction 191, 233
cyanide anion 19–20, 55
cyanohydrin 43, 55, 85
cyanohydrin anion 43, 55
[2+2] cycloaddition reactions 237–238
cyclohexa-1,4-diene 93
cyclohexadienyl cation 147–148
cyclohexanone oxime rearrangement 192
cyclopropane derivatives 75, 88–89

d

Darzens condensation 74
deprotonation 27–28, 37, 43, 181–184
dialkylation 42
dialkyl phosphonates 62
dialkyl sulfides 132
dianion 51
diazabicyclooctane (DABCO) 46
diazirine 183–184
diazoalkane 231–233
diazomethane 229–232
1,3-dibromopropane 41
dichlorocarbene 181–183, 185, 187–189
dichlorodiphenylmethane 173–174
Dieckmann condensation 78
Diels–Alder reaction 223–230, 246
diene reactions 239. *see also* Diels–Alder reaction
dienyl alcohols 246
diethyl ether 132
dihaloalkanes 40
dimethyl maleate 223–224
1,3-dipolar cycloaddition reactions 229–236
dipole–charge interactions 4
dipole–dipole interactions 4
dispersion interactions 4
disproportionation reaction 201
dissociation energy 196, 199–200, 206
dissociation reactions 116–117

e

electrolysis (anodic oxidation) 200, 201
electron, reactions involving 17–18, 50–51

electron-deficient nitrogen compounds
rearrangements 191–192
electron-withdrawing inductive
effect 33–34, 150
electrophilic alkenes 11, 83–84
aromatic compounds with 93–103
carbanions with 87–90
inorganic anions with 84–85
organic anions with charge on
heteroatom with 86–87
organometallic compounds
with 90–92
uncharged nucleophilic agents
with 85–86
electrophilic carbenes 112–113,
181–185
alkenes with 187–189
aromatic compounds with
189–190
inorganic and organic anions
with 185–186
p-electron donors with 186–187
ene reactions 239–241
enolate anions 38–39, 108
enols 178
entropy 4
equilibrium of ion exchange 37
esterification 136–137
esters of tertiary alcohols 134–135
ethyl acetoacetate 41
ethyl chloroacetate 43
ethyl diazoacetate 229–232
ethylmagnesium halide 79

f

formylation 172, 186–187
free energy of transition state 2–3
Friedel–Crafts reaction 161–162,
164–165, 215
fuming sulfuric acid 159

g

Gabriel reaction 30
Gattermann–Koch reaction 171
Gattermann synthesis 174
Gomberg–Bachmann reaction 214
Grignard reagents 78–80, 101

h

halide anions 23
Haller–Bauer reaction 54
halogenation 107–108, 157–159
halogenation of alkanes 205–216
Hammond's postulate 148, 162
heteroatom-stabilized carbocations
112, 130–131
alkenes with 142–143
aromatic compounds with
165–174
inorganic anions with 130–131
p-electron donors with 135–139
1,5-hexadiene derivatives 246–247
highest occupied molecular orbital
(HOMO) energy 3, 6, 223
Hoesch reaction 170
Hofmann rearrangement 191
homolytic dissociation energy
196, 199–200, 206
Horner–Wadsworth–Emmons
reaction 71
Hückel's rule 224
Hunsdiecker–Borodin reaction 211
hybridization 33
hydride anion 18, 51–53
hydroboration 193–194
hydrocarbon carbocations 112
alkenes with 140–142
aromatic compounds
with 161–165
inorganic anions with 127–130
p-electron donors with 131–135

hydrolysis 135–138
hydroperoxides 210
hydroxamic acids 59, 191
hydroxide anion 19, 53–54
hydroxide ion, removal 69–70
hydroxyalkyl carbocations 130, 135–136, 142
hydroxylic solvents 23, 38–39, 129

i

initiator radical 200–201
inorganic anions 9, 113
  alkylating compounds with 17–23
  carbocations with 127–131
  carbonyl compounds with 50–56
  compounds with electrophilic center on heteroatom with 105
  electrophilic alkenes with 84–85
  electrophilic carbenes with 185–186
  inorganic cations with 114, 123
  organic cations with charge on heteroatom with 177
  uncharged electrophilic agents with 125
inorganic cations 111, 113–116
  alkenes with 123–124
  inorganic anions with 114, 123
  nucleophilic agents with 123–124
  p-electron donors with 123
inorganic electrophilic agents. *see also specific agents*
  aromatic compounds with 152–159
  halogenation 157–159
  mercuration 156–157
  nitration 152–156
  nitrosation 156
  thallation 157
intramolecular [2+2] cycloaddition reactions 238
iodide anions 21
iodination 159
isocyanates 191, 233
isopropylbenzene 163–164

j

Japp–Klingemann reaction 178

k

ketals 244
Knoevenagel condensations 70–71, 90
Koch reaction 133–134, 170
Kolbe reaction 214
Kolbe–Schmidt reaction 66

l

Lewis acids 125, 143, 164, 178, 240–241
lithium aluminum hydride (LAH) 18, 52–53
lithium diisopropylamide (LDA) 65
Lossen rearrangement 191
lowest unoccupied molecular orbital (LUMO) energy 3, 6, 223

m

Mannich reaction 144–145, 167
Markovnikov's rule 128–131, 133, 194, 217
mercuration 133, 156–157
Merrifield method 59
methylenic carbanions 40–41
Michael acceptors 11, 87, 92, 188
Michael reaction 87–90
moderately polar, donor solvents 5
monoalkylation 42

n

NBS bromination reactions 208
N-chlorodialkylamines 210
N-dichloromethylene-*N*, *N*-dimethylammonium salts 138–139

nitration 152–156
nitrenes 112–113, 190–191, 233
nitrile oxides 229, 233–234
nitriles, reactions with 136, 137–138
nitroarenes, nucleophilic oxidative substitution of hydrogen 101
nitrogen heterocyclic compounds 215
nitrogen radicals 217–220
nitrones 234–235
nitrosation 156
N, *N*-dialkyl-*N*-chloroamines 211
N, *N*-dimethylaniline 154–156
nonpolar solvents 5
nucleophilic agents 6. *see also specific agents*
  alkylating compounds with 13–46
  aromatic compounds with 93–103
  carbocations with 127–146
  carbonyl compounds with 49–81
  electrophilic alkenes with 83–103
  electrophilic carbenes with 181–190
  electrophilic center with 105–109
  inorganic cations with 123–124
  organic cations with charge on heteroatom with 177–179
  uncharged electrophilic agents with 125
nucleophilicity 13–14

o

O-alkylation 38–39, 41
oleum 159
oligomerization 219
organic anions with charge on heteroatom 9
  alkylating compounds with 27–30
  carbonyl compounds with 61–62
  compounds with electrophilic center on heteroatom with 106–107
  electrophilic alkenes with 86–87
organic azides 190, 229, 232–233
organic cations with charge on heteroatom 112
  aromatic compounds, with 178–179
  enols with 178
  inorganic anions with 177
  p-electron donors with 177–178
organic peracids 193
organocatalysis 70
organometallic compounds 10
  alkylating compounds with 45–46
  carbonyl compounds with 78–81
  compounds with electrophilic center on heteroatom with 109
  electrophilic alkenes with 90–92
oxidation 107
oxidation–reduction reactions 200, 201
oximes of ketones rearrangement 192
ozone 230, 235–236

p

p-electron donors 113
  carbocations with 131–139
  electrophilic carbenes with 186–187
  inorganic cations with 123
  organic cations with charge on heteroatom with 177–178
  uncharged electrophilic agents with 125
pericyclic reactions
  [2+2] cycloaddition reactions 237–238
  Diels–Alder reaction 223–228
  1,3-dipolar cycloaddition reactions 229–236
  ene reactions 239–241
  sigmatropic rearrangements 243–247
Perkin reaction 70

Peterson reaction 71, 73
phase-transfer catalysis (PTC) 20–21, 36–37
  in carbanion reactions 36–37
  in carbene reactions 182–183
  in heteroanions reactions 28–29
  in inorganic anions reactions 20–26
  in nitroarylation reactions 99
  solid-liquid 37–38
phenolates 184–185
phosphorus ylides 71–74
photochemical [2+2] cycloadditions 237–238
Pictet–Spengler synthesis 168
π-electron donors. *see* alkenes; aromatic compounds; enols
polar aprotic donor solvents 5
polarity 3
polarizability 3
polymerization 217–219
Pomeranz–Fritsch reaction 167
Prins reaction 144
protonation 64–67
pyrazolines 232
pyridine 215

q

quaternary ammonium salts 24
  as phase-transfer catalysts 20–22, 28–29, 36–38, 182–183
  synthesis 24

r

radicals 195–197
  addition to unsaturated bonds 217–220
  bromination 207
  chlorination 207–208
  generation 199–203
  substitution reactions 205–216
Ramberg–Bäcklund reaction 44, 108
recombination 195, 201
Reformatsky reaction 81
Reimer–Tiemann reaction 186
Reissert compound 68
Ritter reaction 133, 136
Robinson annulation 89

s

Sandmeyer reaction 212
Schiff bases 56
Seyferth reagents 183
sigmatropic rearrangements
  Claisen rearrangement 243–246
  Cope rearrangement 246–247
Simmons–Smith reaction 185
Skraup synthesis 166
sodium borohydride 18, 52–53
sodium derivatives of acetylene 46
spatial arrangement 3
stabilizing effect 32, 35
Stobbe condensation 68
substitution reactions 147, 179, 201–202, 205–216
sulfonation 159–160
sulfonic acids 178–179
sulfonium salts 132
sulfonyl chlorides 161
sulfur radicals 217–220

t

tetramethylethylenediamine (TMEDA) 46
thallation 157
thermal [2+2] cycloadditions 238
thioalkylation reaction 107
thiophenolates 185
transesterification 62, 68, 245
trialkylamines 86
triphenylphosphine 106

u

Umpolung 43
uncharged electrophilic agents 111, 116
  alkenes with 125, 193–194
  aromatic compounds with 159–161
  chlorosulfonation 161
  hydroboration 193–194
  inorganic anions with 125
  organic peracids 193
  p-electron donors with 125
  sulfonation 159–160
uncharged nucleophilic agents 9
  alkylating compounds with 23–27
  carbonyl compounds with 56–61
  compounds with electrophilic center on heteroatom with 105–106
  electrophilic alkenes with 85–86
unsaturated bonds, radical addition to 217–220

v

vicarious nucleophilic substitution of hydrogen (VNS) 102–103
Vilsmeier reaction 138, 172
vinyl ether 136
von Pechmann reaction 167

w

Williamson reaction 28
Wittig reaction 71–73, 187
Würtz reaction 17
