

## Contents

	<b>Preface</b>	XV
<b>1</b>	<b>General Introduction</b>	<b>1</b>
	<i>Further Reading</i>	5
<b>2</b>	<b>General Classification of Surface-active Agents Used in Agrochemical Formulations</b>	<b>7</b>
2.1	Anionic Surfactants	7
2.1.1	Carboxylates	8
2.1.2	Sulfates	8
2.1.3	Sulfonates	9
2.1.4	Phosphate-containing Anionic Surfactants	10
2.2	Cationic Surfactants	10
2.3	Amphoteric (Zwitterionic) Surfactants	11
2.4	Nonionic Surfactants	12
2.4.1	Alcohol Ethoxylates	12
2.4.2	Alkylphenol Ethoxylates	13
2.4.3	Fatty Acid Ethoxylates	13
2.4.4	Sorbitan Esters and Their Ethoxylated Derivatives (Spans and Tweens)	14
2.4.5	Ethoxylated Fats and Oils	15
2.4.6	Amine Ethoxylates	15
2.4.7	Surfactants Derived from Mono- and Polysaccharides	15
2.5	Speciality Surfactants – Fluorocarbon and Silicone Surfactants	16
2.6	Polymeric Surfactants	17
2.6.1	Ethylene Oxide–Propylene Oxide Copolymers (EO/PO)	17
	<i>References</i>	18
<b>3</b>	<b>Physical Chemistry of Surfactant Solutions</b>	<b>19</b>
3.1	Properties of Solutions of Surfactants	19
3.2	Solubility–Temperature Relationship for Surfactants	23
3.3	Thermodynamics of Micellization	25

3.3.1	Kinetic Aspects	25
3.3.2	Equilibrium Aspects: Thermodynamics of Micellization	26
3.3.3	Phase Separation Model	27
3.3.4	Mass Action Model	28
3.3.5	Enthalpy and Entropy of Micellization	30
3.3.6	Driving Force for Micelle Formation	31
3.4	Micellization in Surfactant Mixtures (Mixed Micelles)	33
3.4.1	Surfactant Mixtures with No Net Interaction	33
3.4.2	Surfactant Mixtures with a Net Interaction	34
3.5	Surfactant–Polymer Interaction	35
3.5.1	Factors Influencing the Association Between Surfactant and Polymer	36
3.5.2	Driving Force for Surfactant–Polymer Interaction	37
3.5.3	Structure of Surfactant–Polymer Complexes	38
3.5.4	Surfactant–Hydrophobically Modified Polymer Interaction	38
	<i>References</i>	39
<b>4</b>	<b>Interfacial Aspects of Agrochemical Formulations</b>	<b>41</b>
4.1	Introduction	41
4.2	Equilibrium Adsorption of Surfactants at the Air/Liquid and Liquid/Liquid Interfaces	41
4.3	The Gibbs Adsorption Isotherm	43
4.4	Dynamic Processes of Adsorption	46
4.4.1	General Theory of Adsorption Kinetics	47
4.4.2	Adsorption Kinetics from Micellar Solutions	49
4.4.3	Experimental Techniques for Studying Adsorption Kinetics	51
4.4.3.1	The Drop Volume Technique	51
4.4.3.2	Maximum Bubble Pressure Technique	52
4.5	Adsorption of Surfactants and Polymeric Surfactants at the Solid/Liquid Interface	55
4.6	Surfactant Adsorption	55
4.6.1	Adsorption of Ionic Surfactants on Hydrophobic Surfaces	56
4.6.2	Adsorption of Ionic Surfactants on Polar Surfaces	59
4.6.3	Adsorption of Nonionic Surfactants	60
4.7	Adsorption of Polymeric Surfactants at the Solid/Liquid Interface	62
4.8	Experimental Methods for Measurement of Adsorption Parameters for Polymeric Surfactants	68
4.8.1	Amount of Polymer Adsorbed, $\Gamma$ – The Adsorption Isotherms	68
4.8.2	Polymer–bound Fraction $p$	71
4.8.3	Adsorbed Layer Thickness $\delta$ and Segment Density Distribution $\rho(z)$	72
4.8.4	Hydrodynamic Thickness Determination	72
	<i>References</i>	74

<b>5</b>	<b>Interaction Forces Between Particles or Droplets in Agrochemical Dispersions (Suspension Concentrates or Emulsions, EWs) and Their Role in Colloid Stability</b>	<b>77</b>
5.1	Introduction	77
5.2	van der Waals Attraction	77
5.3	Electrical Double Layer Repulsion	79
5.4	Total Energy of Interaction: Deryaguin–Landau–Verwey–Overbeek (DLVO) Theory	81
5.5	Criteria for Stabilization of Dispersions with Double Layer Interaction	83
5.5.1	The Zeta Potential	83
5.6	Steric Stabilization of Dispersions	85
5.7	Interaction Between Particles or Droplets Containing Adsorbed Polymeric Surfactant Layers	85
5.7.1	Mixing Interaction, $G_{\text{mix}}$	86
5.7.2	Elastic Interaction, $G_{\text{el}}$	87
5.7.3	Criteria for Effective Steric Stabilization	89
5.8	Flocculation of Sterically Stabilized Dispersions	90
	<i>References</i>	91
<b>6</b>	<b>Emulsion Concentrates (EWs)</b>	<b>93</b>
6.1	Introduction	93
6.2	Formation of Emulsions	94
6.3	Mechanism of Emulsification	95
6.4	Methods of Emulsification	96
6.5	Role of Surfactants in Emulsion Formation	97
6.5.1	Role of Surfactants in Droplet Deformation	99
6.6	Selection of Emulsifiers	100
6.6.1	The Hydrophilic–Lipophilic Balance (HLB) Concept	100
6.6.2	The Phase Inversion Temperature (PIT) Concept	103
6.6.3	The Cohesive Energy Ratio (CER) Concept for Emulsifier Selection	105
6.6.4	The Critical Packing Parameter (CPP) for Emulsifier Selection	107
6.6.5	Emulsion Stability	108
6.7	Creaming or Sedimentation of Emulsions	109
6.7.1	Creaming or Sedimentation Rates	110
6.7.1.1	Very Dilute Emulsions ( $\phi < 0.01$ )	110
6.7.1.2	Moderately Concentrated Emulsions ( $0.2 < \phi < 0.1$ )	110
6.7.1.3	Concentrated Emulsions ( $\phi > 0.2$ )	111
6.7.2	Prevention of Creaming or Sedimentation	111
6.7.2.1	Matching Density of Oil and Aqueous Phases	111
6.7.2.2	Reduction of Droplet Size	111
6.7.2.3	Use of ‘Thickeners’	112
6.7.2.4	Controlled Flocculation	113
6.7.2.5	Depletion Flocculation	113

6.8	Flocculation of Emulsions	114
6.8.1	General Rules for Reducing (Eliminating) Flocculation	115
6.8.1.1	Charge-stabilized Emulsions, e.g. Using Ionic Surfactants	115
6.8.1.2	Sterically Stabilized Emulsions	115
6.9	Ostwald Ripening	115
6.10	Coalescence of Emulsions	117
6.10.1	Rate of Coalescence	119
6.11	Phase Inversion	119
6.12	Experimental Methods for Assessment of Emulsion Stability	120
6.12.1	Assessment of Creaming or Sedimentation	121
6.12.2	Assessment of Emulsion Flocculation	122
6.12.3	Assessment of Ostwald Ripening	123
6.12.4	Assessment of Coalescence	123
6.12.5	Assessment of Phase Inversion	123
	<i>References</i>	123
<b>7</b>	<b>Suspension Concentrates (SCs)</b>	<b>125</b>
7.1	Introduction	125
7.2	Preparation of Suspension Concentrates and the Role of Surfactants/Dispersing Agents	126
7.3	Wetting of the Agrochemical Powder	126
7.3.1	Measurement of Contact Angles of Liquids and Surfactant Solutions on Powders	129
7.3.2	Dispersion and Milling	129
7.3.3	Effect of Surfactant Adsorption	130
7.4	Control of the Physical Stability of Suspension Concentrates	132
7.4.1	Stability Against Aggregation	136
7.4.2	Ostwald Ripening (Crystal Growth)	138
7.4.3	Stability Against Claying or Caking	139
7.4.4	Settling of Suspensions	139
7.4.5	Prevention of Settling and Claying	144
7.4.5.1	Balance of the Density of Disperse Phase and Medium	144
7.4.5.2	Use of High Molecular Weight Polymers ('Thickeners')	144
7.4.5.3	Use of 'Inert' Fine Particles	145
7.4.5.4	Use of Mixtures of Polymers and Finely Divided Solids	146
7.4.6	Controlled Flocculation	146
7.4.7	Depletion Flocculation	146
7.5	Characterization of Suspension Concentrates and Assessment of Their Long-term Physical Stability	147
7.5.1	Assessment of the Structure of the Solid/Liquid Interface	148
7.5.1.1	Double Layer Investigations	148
7.5.1.2	Surfactant and Polymer Adsorption	149
7.5.2	Assessment of the State of the Dispersion	149
7.5.2.1	Measurement of Rate of Flocculation	149
7.5.2.2	Measurement of Incipient Flocculation	150

7.5.2.3	Measurement of Crystal Growth (Ostwald Ripening)	150
7.6	Bulk Properties of Suspension Concentrates	151
7.6.1	Equilibrium Sediment Volume (or Height) and Redispersion	151
7.6.2	Rheological Measurements	151
7.6.2.1	Assessment of Sedimentation	152
7.6.2.2	Assessment of Flocculation	155
7.6.3	Time Effects During Flow – Thixotropy	157
7.6.4	Constant Stress (Creep) Experiments	158
7.6.5	Dynamic (Oscillatory) Measurements	159
	<i>References</i>	164
<b>8</b>	<b>Oil-based Suspension Concentrates</b>	165
8.1	Introduction	165
8.2	Stability of Suspensions in Polar Media	166
8.3	Stability of Suspensions in Nonpolar Media	168
8.3.1	Characterization of the Adsorbed Polymer Layer	169
8.4	Theory of Steric Stabilization	169
8.4.1	Criteria for Effective Steric Stabilization	172
8.5	Settling of Suspensions	172
8.5.1	Prevention of Formation of Dilatant Sediments	172
8.5.2	Examples of Suspending Agents That Can Be Applied for Prevention of Settling in Non-aqueous Suspensions	174
8.6	Emulsification of Oil-based Suspensions	176
8.6.1	Mechanism of Spontaneous Emulsification and the Role of Mixed Surfactant Film	176
8.6.2	Polymeric Surfactants for Oil-based Suspensions and the Choice of Emulsifiers	180
8.6.3	Emulsification into Aqueous Electrolyte Solutions	180
8.7	Proper Choice of the Antisetling System	181
8.8	Rheological Characteristics of the Oil-based Suspensions	181
	<i>References</i>	182
<b>9</b>	<b>Suspoemulsions</b>	183
9.1	Introduction	178
9.2	Systems Investigated	184
9.3	Experimental Methods	185
9.4	Results and Discussion	185
9.4.1	Creaming/Sedimentation of Suspoemulsions	185
9.4.2	Reduction of Interactions in Suspoemulsions	187
9.4.3	Reduction of Heteroflocculation	188
9.4.4	Reduction of Emulsion Coalescence	188
9.4.5	Summary of the Criteria for Preparation of a Stable Suspoemulsion	189
9.4.6	Preparation of Suspoemulsion by Emulsification of the Oil into the Suspension	189

9.4.7	Prevention of Crystallization	190
9.4.8	Model Suspoemulsion of Polystyrene Latex and Isoparaffinic Oil Stabilized with Synperonic PE(PEO–PPO–PEO A–B–A Block Copolymer)	191
9.4.9	Model Systems of Polystyrene Latex with Grafted PEO Chains and Hexadecane Emulsions	192
9.5	Conclusions	195
	<i>References</i>	196
<b>10</b>	<b>Microemulsions</b>	197
10.1	Introduction	197
10.2	Thermodynamic Definition of Microemulsions	198
10.3	Application in Agrochemicals	199
10.4	Basic Principles of Microemulsion Formation and Thermodynamic Stability	200
10.4.1	Mixed Film Theories	200
10.4.2	Solubilization Theories	202
10.4.3	Thermodynamic Theory of Microemulsion Formation and Stability	204
10.4.4	Reason for Combining Two Surfactants	205
10.4.5	Factors Determining W/O Versus O/W Microemulsions	206
10.5	Characterization of Microemulsions Using Scattering Techniques	207
10.5.1	Time-averaged (Static) Light Scattering	208
10.5.1.1	Calculation of Droplet Size from Interfacial Area	210
10.5.2	Dynamic Light Scattering (Photon Correlation Spectroscopy, PCS)	211
10.6	Characterization of Microemulsions Using Conductivity	212
10.7	NMR Measurements	214
10.8	Selection of Surfactants for Formulation of Microemulsions	215
10.9	Role of Microemulsions in Enhancement of Biological Efficacy	215
	<i>References</i>	218
<b>11</b>	<b>Multiple Emulsions</b>	219
11.1	Introduction	219
11.1.1	Preparation of Multiple Emulsions	219
11.1.2	Types of Multiple Emulsions	220
11.1.3	Breakdown Processes of Multiple Emulsions	221
11.1.4	Factors Affecting Stability of Multiple Emulsions and Criteria for Their Stabilization	222
11.2	General Description of Polymeric Surfactants	223
11.3	Interaction Between Oil or Water Droplets Containing an Adsorbed Polymeric Surfactant – Steric Stabilization	225
11.4	Examples of Multiple Emulsions Using Polymeric Surfactants	232
	<i>References</i>	233

<b>12</b>	<b>Controlled-release Formulations</b>	<b>235</b>
12.1	Introduction	235
12.2	Microencapsulation	235
12.3	Mechanism of Release of Active Ingredient from Microcapsules	237
12.4	Encapsulation by Phase Separation from Aqueous Solution	237
12.5	Microencapsulation of Solid Particles	238
12.6	Controlled Release of Agrochemicals from Matrix-based Microparticles	239
12.7	Mechanism of Controlled Release from Microparticles	240
12.8	Controlled Release from Granules	242
	<i>References</i>	245
<b>13</b>	<b>Basic Principles of Selection of Adjuvants in Agrochemical Formulations</b>	<b>247</b>
13.1	Introduction	247
13.2	Interactions at the Air/Solution Interface and Their Effect on Droplet Formation	251
13.3	Spray Impaction and Adhesion	255
13.4	Droplet Sliding and Spray Retention	258
13.5	Wetting and Spreading	262
13.6	Evaporation of Spray Drops and Deposit Formation	266
13.7	Solubilization and its Effect on Transport	268
13.8	Interaction Between Surfactant, Agrochemical and Target Species	271
	<i>References</i>	272
	<b>Subject Index</b>	<b>273</b>
