

## Index

### a

abrasion test 14  
 acid etching 28  
 actin cytoskeleton 16, 216  
 adhesion peptides 86  
 – immobilization of 86  
 adsorption kinetics 156  
 adsorption process 163, 166, 167  
 – beginning of 166  
 – theoretical description 163  
 alkali treatment 26  
 7-amido-4-methylcoumarine (AMC) 84  
 3-aminopropyltriethoxysilane (APTES) 81  
 amorphous alloys 12, 16  
 angiogenesis 208  
 – *in vitro* 208  
 – parameter of 211  
 anodic oxidation 65  
 anodic reactions 130  
 anti-fibronectin antibodies 239  
 apatite lattice 79, 81  
 atomic force microscope (AFM) 41, 52, 143

### b

bioactive coatings 202  
 bioactive substances 104  
 – immobilization of 104  
 bioadhesion 3  
 biocompatibility test 204, 242  
 – *in vitro* 204  
 – pro-inflammatory factors 207  
 bovine aortic endothelial cell 219  
 bovine serum albumin (BSA) 150, 153  
 bradykinin system 243  
 Brownian dynamics (BD) method 163

### c

carbonate hydroxyapatite (CHA) 71  
 cathodic electrical field 29

cathodic reactions 130  
 cell adsorption experiments 154, 155  
 cell spreading 179, 216, 217  
 cell viability tests 222, 223  
 chemical vapor deposition (CVD)  
 102, 154  
 chronoamperometry 130  
 cobalt-based biomaterials 88  
 confocal microscopy 179  
 constant phase element (CPE) 134  
 conventional photolytic processes 39  
 corrosion  
 – current density 130  
 – resistance 14, 69, 71, 130  
 – tests 69  
 current density–potential curves 53, 63,  
 66, 69

### d

DC-protein assay 173  
 direct laser etching 40  
 direct write technique 37  
 DLVO theory 164  
 DTA-TG measurements 52  
 Dulbecco's modified minimum essential  
 medium (DMEM) 184

### e

electrochemical etching 28  
 electrochemical impedance spectroscopy  
 (EIS) 10, 132  
 electrochemical method(s) 129, 132, 138  
 electroconductive coatings 31  
 electrolytic micro-plasma process (EMP)  
 44, 45  
 electron beam lithography 198  
 electron spectroscopy for chemical analysis  
 (ESCA) 65

- electroreflectance spectroscopy (ERS) 143, 145  
 ellipsometry 54, 66  
 embryonic extracellular matrix (ECM) 196  
 energy-dependent light intensity 144  
 energy dispersive X-ray analysis (EDX) 5, 12, 74  
 enossal implants 59  
 enzyme-linked immunosorbent assay (ELISA) 159, 174  
 etching techniques 23, 30  
 exchange current density 130  
 extracellular matrix (ECM) 202, 206  
 – coated dots 236
- f**
- Fermi-level pinning 147, 148  
 – effect of 148  
 fibrinogen 156  
 fibrinogen–fibrin system 243  
 fibronectin 216  
 – double immunofluorescence of 216  
 – pre-coated labeled fibronectin 109  
 9-fluorenylmethoxycarbonyl (Fmoc) 84  
 fluorescence microscopy 107  
 FN-covered steel surface 159  
 Fourier transformation 122  
 Fourier transform infrared (FTIR) 65, 72  
 – spectra 77  
 fractal dimension 130  
 – electrochemical measurement of 130  
 free hydroxyl groups 3
- g**
- Gaussian radial distribution 39  
 gel electrophoresis 184  
 glancing-angle XRD 65  
 – measurements 55  
 global ion concentration 149  
 – influence of 149
- h**
- Helmholtz layer 151  
 hemocompatibility 35  
 hen egg white lysozyme (HEWL) 163  
 heparin-modified surface 101  
 heterobifunctional reagent 83  
 hexamethyldisilane (HMDS) 7  
 hexamethyldiisocyanate (HDI) 102  
 high-resolution scanning electron microscopy (HRSEM) 52, 59  
 human endothelial cells 9  
 human osteoblasts 215  
 human osteogenic sarcoma cells 191  
 human skin fibroblasts (HSF) 200
- hyaluronan-mediated adhesion 179  
 hydrodynamic shear stress 244  
 hydrolysis–condensation reaction 52, 54  
 hydrophobicity 30  
 hydroxyapatite-coated material 185
- i**
- image-forming process 39  
 immobilized heparin 94  
 immunoblotting 184, 185  
 immunofluorescence microscopy 184  
 impedance spectroscopy 10, 132, 134, 135  
 – application of 134  
 integrin-mediated adhesion 182  
 integrin receptors 216, 217  
 – colocalization of 216  
 intracytoplasmic antigens 202  
 isoelectric point (IEP) 173
- k**
- keratinocytes 200, 201
- l**
- laser-assisted oxidation 44  
 laser-induced reaction 40  
 laser scanning microscopy (LSM) 23, 198  
 laser–solid interactions 37, 38  
 linear voltammetry 129  
 low wear resistance 4
- m**
- maleic anhydride copolymer films 106  
 mask projection techniques 37  
 matrix–substrate interaction 240  
 – mechanical–technological properties 14  
 mesenchymal bone cells 104  
 mesenchymal stem cells 239  
 microfabrication processes 37  
 micrometer-sized groves 239  
 microvascular aortic endothelial cells 223  
 monocytic chemoattractant protein-1 (MCP-1) 205  
 Mott–Schottky equation 10
- n**
- nanosized topography 59  
 N-terminal amino group 84, 86
- o**
- open circuit potential 130  
 – measurement of 129  
 optical projection lithography 37  
 osteoblast-like cells 92, 230

- oxidation process 34  
oxidation techniques 65
- p**  
parabolic oxidation law 40  
particle-filled titanium coatings 60  
particle–nanostructure interactions 164  
passive film 16  
peripheral actin ring 205  
*p*-phenylenediisothiocyanate 84  
phosphate buffered saline (PBS) 63, 129, 149  
physical vapor deposition (PVD) 95  
plasma processes 44  
plasma-spray technique 81  
Poisson–Boltzmann equation 165  
polarization-dependent protein adsorption 174  
polycrystalline oxide layer 59  
polymerase chain reaction (PCR) 203  
positive phototaxis 195  
potential distributions 163  
protein adsorption 99, 168, 173, 177  
– mechanism 168  
– orientation 178  
protein–protein Coulomb interaction 166  
protein–protein interaction 163, 164, 166  
pyrolytic laser direct writing 39
- q**  
QCM-D experiments 153  
– measuring principle 154  
QCM-D technique 100, 160
- r**  
Raman spectroscopy 72, 84, 98  
– measurements 62  
Raster Kelvin probe 192  
RGD peptides 83  
– immobilization of 83  
rotating electrode process (REP) 35
- s**  
saturated calomel electrode (SCE) 10, 129  
scanning electron microscopy (SEM) 12, 23, 72, 180, 192  
self-limited oxidation 41  
sessile drop experiments 23  
sessile drop method 35, 52, 61  
sieving 35  
silane coupling agent 90  
silicon binary system 11  
simulated body fluid (SBF) 26, 72  
sol–gel coatings 51  
sol–gel layers 59  
sol–gel oxides 54  
spark plasma sintering (SPS) 8  
spin-coating techniques 61  
standard hydrogen electrode (SHE) 66  
stoichiometric hydroxyapatite 73, 80  
sub-band-gap transitions 145  
substrate–matrix interactions 241  
surface-bound collagen 91  
– enzymatic stability 91  
surface-bound spacer, quantification of 94  
surface topography 26, 121  
– modification of 31, 92
- t**  
thermogravimetry 52  
thermomechanical treatment 30  
time-dependent process 217  
time-of-flight secondary ion mass spectrometry (TOF-SIMS) 83  
tissue culture plastic 179  
titanium 3  
– discs 96, 143  
– films 143  
– oxide 61, 148, 153  
 $\beta$ -titanium alloys 3  
titanium–cell interface 196  
titanium–silicon  
– alloys 11  
– phase 11  
toluidine blue method 96  
tracing-based topography 128  
transmission electron microscopy (TEM) 12, 200, 202  
transverse microsections 124  
– evaluation of 124  
trifluoroacetic anhydride (TFAA) 89  
tumor necrosis factor- $\alpha$  (TNF $\alpha$ ) 205  
two-phase microstructure 34
- u**  
ultrafine titanium matrix 8  
– use of 130
- v**  
vacuum plasma injection 45  
vascular endothelial cells 204  
vinculin 216  
– colocalization of 216
- w**  
wear-resistant nanocrystalline materials 7  
wettability 30, 35, 61  
writing process 40

**x**

- X-ray diffraction (XRD) 12, 23, 52, 65, 68, 72, 143  
– measurements 59  
X-ray diffractometry 5  
X-ray measurements 81

## X-ray photoelectron spectroscopy (XPS) 13,

23, 65, 84, 89, 102, 107

– measurements 90, 103

**y**

Young modulus 3
