

Index

a

- acetaldehyde, 2'-deoxyribonucleoside
 synthesis 129, 130, 199–209
- acetyloxyphenyl ketones 7, 8
- actinomycetes, glycosylation pattern
 modification 159–198
- actinomycin 144
- actinorhodin 142, 143
- acylation 116, 117, 123, 181, 214, 215,
 220–224
- adenine 204–208
- adenosine triphosphate (ATP) 202, 203,
 206, 207
- S-adenosylmethionine (SAM) 150–152
- aglycone 176, 178, 185, 189, 192
- air-stable racemization catalysts 13, 14
- D-alanine 24, 25
- L-alanine 31, 36, 37, 119, 120
- alcalase 24, 25
- alcohols
 – chiral 112–114
 – secondary 1, 6–16, 112
- aldol reactions
 – aza sugar synthesis 69
 – 2'-deoxyribose-5-phosphate production
 129, 130, 203, 204, 228
 – natural/unnatural sugars 71, 72
 – stereochemistry 61, 62, 127–130
- aldolases
 – C–C bond formation 127–130
 – classes 61, 62
 – DHAP-dependent 61–81, 128
 – FBPA-mediated 70, 71, 73–76
 – pharmaceuticals preparation 227,
 228
- D-allo-isoleucine 24, 25
- allylic alcohols 9, 10, 15, 16
- aluminum catalysts 14, 15
- amidase 25, 26, 122, 123
- amine oxidase 118, 119, 226
- amines
 – chiral 21, 22, 33–37, 117–121
 – secondary 35, 36
 – tertiary 35, 36
- amino acid dehydrogenases 27–29,
 118–120
- amino acids
 – β -2-amino acids 30
 – cyclic 28, 29
 – deracemization 31, 32, 47, 48, 119
 – enantiomerically pure 21–33
- β -amino alcohols 36, 37
- γ -aminobutyric acid (GABA) 215, 216
- aminocoumarins 193, 194
- aminocyclitol analogs of valiolamine 70,
 71
- aminocyclopentadienyl ruthenium chloride
 complex 11, 12
- (R)-4-amino-3-hydroxybutanoic acid
 ((R)-GABOB) 225, 226
- aminolysis 222–226
- α -amino nitriles 26
- aminotransferases 31, 32, 119, 120,
 163, 164
- ammonia lyases 30, 31
- ammoniolysis 121, 122, 223, 224
- analapril 229
- angucyclines 181, 183–186
- anthracyclines 186–191
- antibiotics production
 – cascade reactions 123
 – glycosylated derivatives 167–186, 193,
 194
 – multi-modular synthases 140–146
 – multi-step processes 46, 75, 76
- antitumor drugs 142, 175–181, 182,
 186–191
- aromatization 142–144
- 2-aryl-4-pentenenitriles 27

- asymmetric hydrogenation 7, 8, 32, 125–127
- asymmetric reductive acetylation 7, 8
- asymmetric synthesis
 - chiral amines 119, 120
 - DHAP-dependent aldolases 61–81
 - pharmaceuticals 222
- asymmetric transformations 1–19
- atorvastatin 113, 130, 228
- aureolic acid group 175–181, 182
- aza sugar synthesis 68–71, 77, 78

- b**
- (R)-baclofen 222, 223
- bacterial coupling 98, 99
- benz[*a*]anthraquinone ring system 181, 183–186
- benzylic amines 34
- biocatalysis
 - amino acids and amines 21–39
 - combinatorial 46, 48, 85–97
 - combined chemical/biocatalysis 213–233
 - coupled oxidizing enzymes 48–51, 53–57
 - industrial processes 46, 47
 - oxidizing enzymes 41
 - redox systems 41, 43–45, 48–51
 - whole-cell biotransformations 55
- biochemical retrosynthesis, 2'-deoxyribonucleosides 199–201, 204–207
- bioelectrocatalysis 56
- biofuel cells 56, 58
- biological oxidation mechanisms 44, 45
- biomimetic heterocyclization 141, 142
- biosensors 56, 57
- biosynthesis, combinatorial 86–88, 97–102, 159–198
- biotransformations
 - multi-step 41–60
 - whole-cell 55, 56, 110, 125, 126
- bisindolylmaleimides 191
- brevicommin 73

- c**
- cancer
 - anticancer drugs 142, 175–182, 186–191
 - glycopeptides 96, 97
- carbon–carbon bonds
 - double bond reduction 125, 126
 - formation 61, 70, 127–130
- carboxylic acid derivatives
 - chiral 121–127, 141, 142
- cascade reactions 109–131
- catalase 119, 128, 130
- catalysts, racemization 3–5, 16
- cephalexin 123
- chemical transformations, excised domains 139–155
- chemoenzymatic routes
 - amino acids and amines 21–39
 - iminocyclitol 69, 70, 77, 78
 - macrocyclization 144–147
 - natural products 73–77
 - oxidizing enzymes 46–48, 52–56, 58, 60
 - pharmaceuticals preparation 21, 138–156, 213–233
- chiral alcohols 112–114
- chiral amines
 - chemoenzymatic routes 21, 22, 33–37
 - enzymatic cascade reactions 114–121
- chiral amino acids 21, 22, 47
- chiral carboxylic acid derivatives
 - enzymatic cascade reactions 121–127
- heterocyclic 141, 142
- chlorinase 149
- chloroalanine 31, 32
- chlorobiocin 193, 194
- chloroperoxidase (CPO) 46, 47, 131
- chromomycin 175–176, 179–181, 182
- citalopram 221, 222
- clavulanic acid 154
- cloning
 - genes 165, 167, 168, 170, 176, 181, 188
 - oxidizing enzymes 55, 56
- (S)-clopidogrel 229
- Codexis process 113, 114
- cofactors
 - aldolases 61
 - NAD(P)H 42, 44, 52, 54, 56, 112, 118, 119, 125, 126
 - oxidoreductases 226
 - oxygenases 153–155
 - recycling/regeneration 51, 56, 112, 113, 131
- combinatorial biocatalysis 46, 48, 85–97
- combinatorial biosynthesis
 - actinomycete glycosylation pattern modification 159–198
 - glycoconjugates 86–88, 97–100
- coronatine 149
- coumarin 154
- (+)-crispine A 226, 227

cyanohydrins 123, 124, 229, 230
 cyclic amines 35, 36
 cyclic amino acids 28, 29
 cymene–ruthenium catalysts 9–11
 Cytochrome P450 42, 56, 153, 154

d

dapoxetine 224, 225
 daunorubicin 187, 188
 deacylation, easy-on/easy-off process 116
 Degussa (now Evonik) process 118
 dehydratases 162, 163, 169
 dehydrogenases 43, 44, 49, 118, 226
 deoxy sugars 87, 88–94, 161, 167–175
 deoxygenation 163, 164
 deoxyhexoses 159–194
 2'-deoxyinosine 204, 205, 207, 208
 deoxyriboaldolase 129, 130, 199–205, 207, 208
 2'-deoxyribonucleoside synthesis 199–211
 – one-pot process 206–209
 – three-step process 204–206, 207
 2'-deoxyribose-5-phosphate (DR5P) 129, 130, 200–205
 2'-deoxyribosyl groups 200, 201
 deracemization
 – amines 35–36
 – amino acids 31, 32, 47, 48, 119
 – chiral secondary alcohols 114, 115
 desosamine 170, 172–175
 desosaminyl transferase 173–175
 desymmetrization 222, 225
 diamino acids 29
 dihydroxyacetone (DHA) 64
 dihydroxyacetone phosphate (DHAP)-dependent aldolases 61–81, 128
 – aza sugar synthesis 68–71, 77, 78
 – DHAP preparation 64–68
 – natural product synthesis 73–76, 77
 – natural/unnatural sugar synthesis 73, 74, 128, 129
 – stereospecificity 63–68, 78, 128
 dioxygenases 42, 43, 154, 155
 DNA building blocks
 – glycosylated derivatives 165, 189, 191
 – microbial production 129, 130, 199–210
 dTDP- β -L-rhamnose pathway 88, 89, 91–94
 dynamic kinetic resolution (DKR)
 – chemoenzymatic routes 23, 33–35
 – enzymes 2, 3, 5

– enzymo-metallic catalysis 1–19
 – (*R*)- and (*S*)-selective 5, 12, 13, 16
 – racemic chiral amines 33–35, 114, 116, 117, 119, 120, 122
 – secondary alcohols 1, 6–16, 112

e

elloramycin 189–191
 enantiomerically pure compounds
 – amino acids and amines 21, 22
 – enzymatic cascade processes 111–127
 – pharmaceuticals 213–231
 – synthesis 1, 2, 5, 16
 enoate reductases (EREDs) 26, 125
 enzymatic aminolysis 222–226
 enzymatic hydrolysis 214–218
 enzymatic resolution 1, 5
 enzymatic transesterification 219–222
 enzyme–metal combination 5, 16
 enzymes
 – cascade reactions 109–131
 – chemoenzymatic routes 21–39
 – compartmentalization 109, 110
 – immobilization 109–111
 – kinetic parameters 49, 50, 88, 89
 – oxidizing 48, 49, 52, 53, 55, 56, 58
 – sugar biosynthesis 161–165
 epimerases 163, 164
 epirubicin 189
 epoxide hydrolases 216, 217
 erythromycin 146, 147, 150, 167–169
 Evonik (formerly Degussa) process 118
 excised domains for chemical transformations 139–155
 – aromatization 142–144
 – glycosylation 150, 151
 – halogenation 147–150
 – heterocyclization 139–142
 – macrocyclization 155–157
 – methyltransferases 151–153
 – oxidation 153–155

f

fatty acids (FAs) 137
 fermentation 203, 204
 flavin-dependent enzymes
 – cascade reactions 125
 – halogenation 147, 148
 – multi-step biotransformation processes 42, 44, 45, 56
 – sugar biosynthesis 163
 fluorinase 148, 150
 (*R*)-fluoxetine 226, 227

- formate dehydrogenase (FDH) 113,
 118–121, 126
 formoterol 219
 fructose-1,6-bisphosphate aldolase (FBPA)
 70, 71, 74–76
 fructose-1,6-disphosphate (FDP) 202–204,
 206
 fructose-6-phosphate aldolase (FSA) 76–78
 fusion proteins 99, 102
- g**
- gabapentin 217, 218
 galactose oxidase/catalase 130, 131
 gene clusters 161, 162, 165–182,
 185–193
 gene expression 166, 170–174, 179, 184,
 185, 188–190, 194
 gene inactivation 165, 166, 168–174,
 176–182, 188, 193
 glucose, 2'-deoxyribonucleoside synthesis
 199–209
 glucose dehydrogenase (GDH) 113,
 126
 glucose oxidase/catalase 130, 131
 glutamate racemase 120, 121
 D-glyceraldehyde-3-phosphate (G3P) 199,
 200, 202
 glycoconjugate synthesis, multi-enzyme
 systems 83–100, 102
 glycolipid-related oligosaccharides 96
 glycolysis, D-glyceraldehyde-3-phosphate
 generation 199, 200, 202, 205–207
 glycopeptides 96, 97, 150, 151
 glycosidases
 – glycoconjugate synthesis 84, 86, 97
 – inhibitors 68, 70
 glycosidic oligosaccharide derivatives 96
 glycosylation
 – actinomycetes 159–198
 – bioactive compounds 165–194
 – excised domains for chemical
 transformations 150, 151
 – gene expression 166, 170–174, 179, 184,
 185, 188–190, 194
 – gene inactivation 165, 166, 168–174,
 176–182, 188, 193
 glycosyltransferases 150, 151
 – actinomycetes biosyntheses 166, 169,
 176, 179, 180, 184–186, 188, 191
 – fused proteins 99
 – Leloir glycosyltransferases 86–88, 97
 – nucleotide sugar synthesis 91–94,
 96
- oligosaccharide synthesis 99, 100
 griseorhodin 142, 143
- h**
- halogenases 147–150
 halogenation 147–150
 halohydrin dehalogenase (HHDH) 114
 haloperoxidases 43, 147, 148
 hepatitis C virus (HCV) protease
 inhibitors 21
 heterocyclization 139–142
 Hofmann rearrangement 25
 hybrid peptides 144, 145
 hydrocyanation 123–125
 hydrogen peroxide 130, 131
 hydrogenation
 – asymmetric 7, 8, 32, 125–127
 – transfer-hydrogenation 6
 hydrolases 2, 3, 213–226
 hydrolysis 214–216, 218
 α -hydroxy acids 119, 120, 123–125
 hydroxylases 42
 hydroxynitrile lyase 123
- i**
- ibuprofen 215, 216
 iminium ion 35, 36
 iminocyclitol 68–70, 77, 78
 immobilization of enzymes 109–111
in vitro/in vivo multi-enzyme systems 85,
 86
 indenyl ruthenium complex 8, 9
 indoles 148
 indolocarbazoles 148, 149, 191–193
 intramolecular reductive amination 69, 70
 ionic liquids 9, 10
 iridium catalysts 35
 L-isoleucine 24, 25, 149
 isomerases 70, 71, 72, 74
 isopenicillin 154
 isopropenyl acetate 12–14
 isopropyl butyrate 14
- k**
- α -keto amino acids 27–29, 119
 ketones, asymmetric reductive
 acetylation 7, 8
 ketoreductase (KRED) 112–114, 125, 162,
 164, 176
 kinetic parameters 49, 50, 88, 89
- l**
- laccases 46, 47, 49–51
 lactate dehydrogenase 37, 120, 121

- lactones 146, 147, 167–175
landomycins 184–186
Leilor glycosyltransferases 86–88, 97
tert-leucine 32, 33, 118
leucine dehydrogenase 33, 119
lipases
– amine acylation 114–117
– chemoenzymatic synthesis 23, 24, 33–35
– enzyme-metallic catalysis 2, 3, 5, 15
– pharmaceuticals preparation 214–216, 219–225, 231
lisinopril 229
living-cell processes, oligosaccharide synthesis 98–102
lyases 30, 31, 123, 213, 227–230, 231
lysine cyclodeaminase gene 29, 30
L lysine oxidase 28, 29
- m**
macrocyclization 155–157
macrolides 167–175
malononitriles 25, 26
(*R*)-mandelic acid 123, 124
Meerwein–Ponndorf–Verley–Oppenauer reaction 14
metabolic engineering
– 2'-deoxyribonucleoside synthesis 199–205
– gene clusters 165
– multi-modular synthases 137, 139, 149, 150, 156
metabolically engineered cells 97–100
metal-catalyzed racemization 1, 2, 5, 6
– catalysts 3–5, 16
N-methyl-L-amino acid dehydrogenases (NMAADH) 28, 29
β-methyl-β-aryl alanine 32
methyl esters 24, 215
N-methyl-L-phenylalanine 28, 29
methylation 151–153, 163–165, 179
N-methylpyrrolidine 35, 36
methyltransferases 151–153, 163–165
methymycin 171–175
microbial production, DNA building blocks 129, 130, 199–211
mithramycin 175–179
modular biosynthetic systems 137–158
molecular oxygen 118, 119, 153–155
momensin 140, 141
monoamine oxidase (MAO) 35, 36
monosaccharides 86, 97, 161
multi-enzyme systems
– bioelectrocatalysis 56
– cascade reactions 110
– chemoenzymatic routes 21
– 2'-deoxyribonucleoside synthesis 209
– design and development 48, 49
– glycoconjugate synthesis 83–103
– *in situ* regeneration of nucleotide sugars 88–94
– *in vitro/in vivo* 85, 86
– natural/unnatural sugar synthesis 71–73
– one-pot processes 206–208
– redox systems 41, 43–45, 55, 56
– whole-cell biotransformations 55, 56
multi-modular synthases 137–158
multi-step biotransformation processes
– cofactor recycling 51, 52, 55, 56
– combinatorial biocatalysis 46, 48
– DHAP-dependent aldolases 61–81
– enzymatic cascade reactions 109, 110

– enzyme biocatalysis 41
– heterologous expression 55, 58
– redox potentials 43–45, 48–50, 52
– whole-cell biotransformations 55
reductases 48, 54, 163, 226
reductive amination 27, 28, 69, 70, 117–121
regioselectivity, methylation 152, 153
retrosynthesis, 2'-deoxyribonucleosides 199–201, 204–207
D-rhodinoses 181, 183, 184, 188

- rhodium catalysts 31
 room temperature racemization 11–14, 16
 rosuvastatin 228
 ruthenium catalysts
 – air-stable 13, 14
 – amine DKR 33
 – racemization 3–5
 – secondary alcohol DKR 6–14
- S**
 Schiff's bases 24, 61
 secondary alcohols, dynamic kinetic
 resolution 1, 6–16, 112
 secondary amines 35, 36
 sphydrofuran 74
 spinosyn 171, 172
 staurosporine 191–193
 stereochemistry
 – aldol reactions 61, 62, 127–130
 – C–C bond formation 127, 128
 – DHAP-dependent aldolases 63–76, 78,
 128
 stereoinversion, amino acids 31, 32
 subtilisin
 – chemoenzymatic synthesis 24
 – enzyo-metallic catalysis 3, 5, 12, 13, 16
 sugar synthesis
 – actinomycetes 159–175
 – aza sugars 68–71, 77, 78
 – enzymes 161–165
 – glycoconjugates 85, 86
 – glycosylation 150, 151
 – natural/unnatural sugars 73, 74, 77, 78,
 128, 129
 – nucleotide deoxy sugars 87–94
 – nucleotide sugars 85–94
 – sugar exchange 150, 151
 surfactin 147
 syringolides 76, 77
- t**
 tandem heterocycles 140–142
 TDP-4-keto-6-deoxy-D-glucose 162
 telomerase inhibitors 140, 142
 telomestatin 140
- (*R*)-terbutaline 228
 tertiary amines 35, 36
 tetrahydroisoquinoline-1-carboxylic acid
 ethyl ester 23
 thiazoles 140–142
 thioesterase (TE) 141, 142, 144–147
 thioesters 23, 24
 thiyl radicals 34, 35
 threonine aldolase 36, 37
 transaminases 36, 37, 119–121
 transesterification 219–222
 transfer-hydrogenation 6
 transition metal/protein catalysts 30, 31
 transketolase 129
 trifluoroethyl butanoate 12, 13
 tylosin 162–164, 170, 171
 tyrocidine A 144–146
 tyrosinase 50, 51
 L-tyrosine decarboxylase 36, 37
- U**
 U-50,488 224
 urdamycin 181, 183, 184
- V**
 valiolamine, aminocyclitol analogs 70, 71
 vanadium catalysts 15, 16
 vinyl esters 8
- W**
 whole-cell biotransformations
 – enzymatic cascade reactions 110, 125,
 126
 – multi-enzyme systems 55, 56
- Y**
 yeast treatment
 – DNA building blocks 202–204,
 206–208
 – fusion proteins 99, 102
 – pharmaceuticals preparation 226,
 227
- Z**
 zopiclone 215–217
