Preface XVII

Part I Basics and Methods 1

1 Introduction to Scanning Electron Microscopy 3

Christina Scheu and Wayne D. Kaplan

1.1 Components of the Scanning Electron Microscope 4

1.1.1 Electron Guns 6

1.1.2 Electromagnetic Lenses 9

1.1.3 Deflection System 13

1.1.4 Electron Detectors 13

1.1.4.1 Everhart–Thornley Detector 13

1.1.4.2 Scintillator Detector 15

1.1.4.3 Solid-State Detector 16

1.1.4.4 In-Lens or Through-the-Lens Detectors 16

1.2 Electron–Matter Interaction 16

1.2.1 Backscattered Electrons (BSEs) 20

1.2.2 Secondary Electrons (SEs) 22

1.2.3 Auger Electrons (AEs) 25

1.2.4 Emission of Photons 25

1.2.4.1 Emission of X-Rays 25

1.2.4.2 Emission of Visible Light 26

1.2.5 Interaction Volume and Resolution 26

1.2.5.1 Secondary Electrons 27

1.2.5.2 Backscattered Electrons 27

1.2.5.3 X-Rays 27

1.3 Contrast Mechanisms 28

1.3.1 Topographic Contrast 28

1.3.2 Composition Contrast 31

1.3.3 Channeling Contrast 31

1.4	Electron Backscattered Diffraction (EBSD)	31
1.5	Dispersive X-Ray Spectroscopy	34
1.6	Other Signals	36
1.7	Summary	36
	References	37
2	Conventional and Advanced Electron Transmission Microscopy	39
	<i>Christoph Koch</i>	
2.1	Introduction	39
2.1.1	Introductory Remarks	39
2.1.2	Instrumentation and Basic Electron Optics	40
2.1.3	Theory of Electron–Specimen Interaction	42
2.2	High-Resolution Transmission Electron Microscopy	48
2.3	Conventional TEM of Defects in Crystals	54
2.4	Lorentz Microscopy	55
2.5	Off-Axis and Inline Electron Holography	57
2.6	Electron Diffraction Techniques	59
2.6.1	Fundamentals of Electron Diffraction	59
2.7	Convergent Beam Electron Diffraction	61
2.7.1	Large-Angle Convergent Beam Electron Diffraction	63
2.7.2	Characterization of Amorphous Structures by Diffraction	63
2.8	Scanning Transmission Electron Microscopy and Z-Contrast	63
2.9	Analytical TEM	66
	References	67
3	Dynamic Transmission Electron Microscopy	71
	<i>Thomas LaGrange, Bryan W. Reed, Wayne E. King, Judy S. Kim, and Geoffrey H. Campbell</i>	
3.1	Introduction	71
3.2	How Does Single-Shot DTEM Work?	72
3.2.1	Current Performance	74
3.2.2	Electron Sources and Optics	75
3.2.3	Arbitrary Waveform Generation Laser System	80
3.2.4	Acquiring High Time Resolution Movies	81
3.3	Experimental Applications of DTEM	82
3.3.1	Diffusionless First-Order Phase Transformations	82
3.3.2	Observing Transient Phenomena in Reactive Multilayer Foils	85
3.4	Crystallization Under Far-from-Equilibrium Conditions	88
3.5	Space Charge Effects in Single-Shot DTEM	90
3.5.1	Global Space Charge	90
3.5.2	Stochastic Blurring	91
3.6	Next-Generation DTEM	91
3.6.1	Novel Electron Sources	91
3.6.2	Relativistic Beams	92
3.6.3	Pulse Compression	93

3.6.4	Aberration Correction	93
3.7	Conclusions	94
	References	95
4	Formation of Surface Patterns Observed with Reflection Electron Microscopy	99
	<i>Alexander V. Latyshev</i>	
4.1	Introduction	99
4.2	Reflection Electron Microscopy	102
4.3	Silicon Substrate Preparation	107
4.4	Monatomic Steps	109
4.5	Step Bunching	111
4.6	Surface Reconstructions	114
4.7	Epitaxial Growth	115
4.8	Thermal Oxygen Etching	116
4.9	Conclusions	119
	References	119
Part II	Growth and Interactions	123
5	Electron and Ion Irradiation	125
	<i>Florian Banhart</i>	
5.1	Introduction	125
5.2	The Physics of Irradiation	126
5.2.1	Scattering of Energetic Particles in Solids	126
5.2.2	Scattering of Electrons	128
5.2.3	Scattering of Ions	129
5.3	Radiation Defects in Solids	129
5.3.1	The Formation of Defects	129
5.3.2	The Migration of Defects	130
5.4	The Setup in the Electron Microscope	131
5.4.1	Electron Irradiation	131
5.4.2	Ion Irradiation	132
5.5	Experiments	132
5.5.1	Electron Irradiation	133
5.5.2	Ion Irradiation	140
5.6	Outlook	141
	References	142
6	Observing Chemical Reactions Using Transmission Electron Microscopy	145
	<i>Renu Sharma</i>	
6.1	Introduction	145
6.2	Instrumentation	146
6.3	Types of Chemical Reaction Suitable for TEM Observation	150

6.3.1	Oxidation and Reduction (Redox) Reactions	150
6.3.2	Phase Transformations	151
6.3.3	Polymerization	151
6.3.4	Nitridation	152
6.3.5	Hydroxylation and Dehydroxylation	152
6.3.6	Nucleation and Growth of Nanostructures	153
6.4	Experimental Setup	154
6.4.1	Reaction of Ambient Environment with Various TEM Components	154
6.4.2	Reaction of Grid/Support Materials with the Sample or with Each Other	154
6.4.3	Temperature and Pressure Considerations	155
6.4.4	Selecting Appropriate Characterization Technique(s)	156
6.4.5	Recording Media	156
6.4.6	Independent Verification of the Results, and the Effects of the Electron Beam	157
6.5	Available Information Under Reaction Conditions	157
6.5.1	Structural Modification	158
6.5.1.1	Electron Diffraction	158
6.5.1.2	High-Resolution Imaging	158
6.5.2	Chemical Changes	161
6.5.3	Reaction Rates (Kinetics)	164
6.6	Limitations and Future Developments	164
	References	165
7	<i>In-Situ</i> TEM Studies of Vapor- and Liquid-Phase Crystal Growth	171
	<i>Frances M. Ross</i>	
7.1	Introduction	171
7.2	Experimental Considerations	172
7.2.1	What Crystal Growth Experiments are Possible?	172
7.2.2	How Can These Experiments be Made Quantitative?	173
7.2.3	How Relevant Can These Experiments Be?	175
7.3	Vapor-Phase Growth Processes	175
7.3.1	Quantum Dot Growth Kinetics	176
7.3.2	Vapor–Liquid–Solid Growth of Nanowires	177
7.3.3	Nucleation Kinetics in Nanostructures	180
7.4	Liquid-Phase Growth Processes	183
7.4.1	Observing Liquid Samples Using TEM	183
7.4.2	Electrochemical Nucleation and Growth in the TEM System	184
7.5	Summary	187
	References	188
8	<i>In-Situ</i> TEM Studies of Oxidation	191
	<i>Guangwen Zhou and Judith C. Yang</i>	
8.1	Introduction	191
8.2	Experimental Approach	192

8.2.1	Environmental Cells	192
8.2.2	Surface and Environmental Conditions	193
8.2.3	Gas-Handling System	194
8.2.4	Limitations	195
8.3	Oxidation Phenomena	196
8.3.1	Surface Reconstruction	196
8.3.2	Nucleation and Initial Oxide Growth	197
8.3.3	Role of Surface Defects on Surface Oxidation	198
8.3.4	Shape Transition During Oxide Growth in Alloy Oxidation	199
8.3.5	Effect of Oxygen Pressure on the Orientations of Oxide Nuclei	202
8.3.6	Oxidation Pathways Revealed by High-Resolution TEM Studies of Oxidation	203
8.4	Future Developments	205
8.5	Summary	206
	References	206
Part III	Mechanical Properties	209
9	Mechanical Testing with the Scanning Electron Microscope	211
	<i>Christian Motz</i>	
9.1	Introduction	211
9.2	Technical Requirements and Specimen Preparation	212
9.3	<i>In-Situ</i> Loading of Macroscopic Samples	214
9.3.1	Static Loading in Tension, Compression, and Bending	214
9.3.2	Dynamic Loading in Tension, Compression, and Bending	216
9.3.3	Applications of <i>In-Situ</i> Testing	216
9.4	<i>In-Situ</i> Loading of Micron-Sized Samples	217
9.4.1	Static Loading of Micron-Sized Samples in Tension, Compression, and Bending	218
9.4.2	Applications of <i>In-Situ</i> Testing of Small-Scale Samples	220
9.4.3	<i>In-Situ</i> Microindentation and Nanoindentation	222
9.5	Summary and Outlook	223
	References	223
10	<i>In-Situ</i> TEM Straining Experiments: Recent Progress in Stages and Small-Scale Mechanics	227
	<i>Gerhard Dehm, Marc Legros, and Daniel Kiener</i>	
10.1	Introduction	227
10.2	Available Straining Techniques	228
10.2.1	Thermal Straining	228
10.2.2	Mechanical Straining	229
10.2.3	Instrumented Stages and MEMS/NEMS Devices	230
10.3	Dislocation Mechanisms in Thermally Strained Metallic Films	233
10.3.1	Basic Concepts	233
10.3.2	Dislocation Motion in Single Crystalline Films and Near Interfaces	235

10.3.3	Dislocation Nucleation and Multiplication in Thin Films	236
10.3.4	Diffusion-Induced Dislocation Plasticity in Polycrystalline Cu Films	239
10.4	Size-Dependent Dislocation Plasticity in Metals	239
10.4.1	Plasticity in Geometrically Confined Single Crystal fcc Metals	241
10.4.2	Size-Dependent Transitions in Dislocation Plasticity	243
10.4.3	Plasticity by Motion of Grain Boundaries	244
10.4.4	Influence of Grain Size Heterogeneities	245
10.5	Conclusions and Future Directions	247
	References	248
11	<i>In-Situ</i> Nanoindentation in the Transmission Electron Microscope	255
	<i>Andrew M. Minor</i>	
11.1	Introduction	255
11.1.1	The Evolution of <i>In-Situ</i> Mechanical Probing in a TEM	255
11.1.2	Introduction to Nanoindentation	256
11.2	Experimental Methodology	260
11.3	Example Studies	263
11.3.1	<i>In-Situ</i> TEM Nanoindentation of Silicon	263
11.3.2	<i>In-Situ</i> TEM Nanoindentation of Al Thin Films	269
11.4	Conclusions	272
	References	274
Part IV	Physical Properties	279
12	Current-Induced Transport: Electromigration	281
	<i>Ralph Spolenak</i>	
12.1	Principles	281
12.2	Transmission Electron Microscopy	283
12.2.1	Imaging	283
12.2.2	Diffraction	288
12.2.3	Convergent Beam Electron Diffraction (CBED): Measurements of Elastic Strain	288
12.3	Secondary Electron Microscopy	289
12.3.1	Imaging	289
12.3.2	Elemental Analysis	291
12.3.3	Electron Backscatter Diffraction (EBSD)	292
12.4	X-Radiography Studies	292
12.4.1	Microscopy and Tomography	292
12.4.2	Spectroscopy	293
12.4.3	Topography	294
12.4.4	Microdiffraction	294
12.5	Specialized Techniques	295
12.5.1	Focused Ion Beams	295

12.5.2	Reflective High-Energy Electron Diffraction (RHEED)	296
12.5.3	Scanning Probe Methods	296
12.6	Comparison of <i>In-Situ</i> Methods	297
	References	299
13	Cathodoluminescence in Scanning and Transmission Electron Microscopies	303
	<i>Yutaka Ohno and Seiji Takeda</i>	
13.1	Introduction	303
13.2	Principles of Cathodoluminescence	304
13.2.1	The Generation and Recombination of Electron-Hole Pairs	304
13.2.2	Characteristic of CL Spectroscopy	305
13.2.3	CL Imaging and Contrast Analysis	306
13.2.4	Spatial Resolution of CL Imaging and Spectroscopy	306
13.2.5	CL Detection Systems	307
13.3	Applications of CL in Scanning and Transmission Electron Microscopies	307
13.3.1	Assessments of Group III–V Compounds	308
13.3.1.1	Nitrides	308
13.3.1.2	III–V Compounds Except Nitrides	309
13.3.2	Group II–VI Compounds and Related Materials	310
13.3.2.1	Oxides	310
13.3.2.2	Group II–VI Compounds, Except Oxides	312
13.3.3	Group IV and Related Materials	313
13.4	Concluding Remarks	313
	References	313
14	<i>In-Situ</i> TEM with Electrical Bias on Ferroelectric Oxides	321
	<i>Xiaoli Tan</i>	
14.1	Introduction	321
14.2	Experimental Details	323
14.3	Domain Polarization Switching	324
14.4	Grain Boundary Cavitation	326
14.5	Domain Wall Fracture	331
14.6	Antiferroelectric-to-Ferroelectric Phase Transition	335
14.7	Relaxor-to-Ferroelectric Phase Transition	341
	References	345
15	Lorentz Microscopy	347
