

## Contents

Preface *XIII*

### Volume I

- 1 Eukaryotic Gene Expression by RNA Polymerase II 1**  
*Geetha Durairaj, Shivani Malik, and Sukesh R. Bhaumik*
  - 1.1 Introduction 1
  - 1.2 Transcriptional Initiation of RNA Polymerase II Genes 1
  - 1.3 Transcriptional Elongation of RNA Polymerase II Genes 5
  - 1.4 Transcriptional Termination of RNA Polymerase II Gene 8
  - 1.5 Capping of mRNA at the 5'-End 9
  - 1.6 Processing of mRNA at the 3'-End 10
  - 1.7 Splicing of mRNA 11
  - 1.8 Nuclear Export of mRNA for Translation 13
  - 1.9 Conclusion 17
  - References 17
  
- 2 Epigenetic Code: Histone Modification, Gene Regulation, and Chromatin Dynamics 29**  
*Arunoday Bhan, Paromita Deb, and Subhrangsu S. Mandal*
  - 2.1 Introduction 29
  - 2.2 Histone Modifications 31
    - 2.2.1 Histone Acetylation and Deacetylation 31
    - 2.2.2 Histone Lysine Methylation 33
      - 2.2.2.1 Histone H3K4-Specific Methylases 34
      - 2.2.2.2 H3K9-Specific Histone Methylases 35
      - 2.2.2.3 H3K27-Specific Methylases 35
      - 2.2.2.4 H3K36-Methylases 36
      - 2.2.2.5 H4K20-Specific Methylases 37
      - 2.2.2.6 H3K79-Methylases 37
    - 2.3 Histone Lysine Demethylation 38
    - 2.4 Histone Arginine Methylation 39
    - 2.5 Histone Phosphorylation and Dephosphorylation 40

2.6	Histone ADP-Ribosylation	42
2.7	Histone Ubiquitination	43
2.8	“Epigenetic Code” Hypothesis and Conclusion	44
	Acknowledgments	48
	List of Abbreviations	48
	References	49
<b>3</b>	<b>Histone Lysine Methylation, Demethylation, and Hormonal Gene Regulation</b>	<b>59</b>
	<i>Yaling Huang, Briana Dennehey, and Xiaobing Shi</i>	
3.1	Introduction	59
3.2	The Enzymes That Catalyze Histone Lysine Methylation and Demethylation	60
3.2.1	Lysine Methyltransferases (KMTs)	61
3.2.1.1	KMT1 Family	61
3.2.1.2	KMT2 Family	71
3.2.1.3	KMT3 Family	72
3.2.1.4	KMT4 Family	73
3.2.1.5	KMT5 Family	73
3.2.1.6	KMT6 Family	73
3.2.1.7	KMT7 Family	73
3.2.1.8	KMT8 Family	74
3.2.1.9	Unclassified KMTs	74
3.2.2	Lysine Demethylases (KDMs)	75
3.2.2.1	KDM1 Family	75
3.2.2.2	KDM2 Family	75
3.2.2.3	KDM3 Family	76
3.2.2.4	KDM4 Family	76
3.2.2.5	KDM5 Family	76
3.2.2.6	KDM6 Family	77
3.2.2.7	KDM7 Family	77
3.2.2.8	KDM8 Family	77
3.2.2.9	Unclassified KDMs	78
3.3	Histone Lysine Methylation in Hormone Signaling	78
3.3.1	Hormone Receptor Classification	78
3.3.2	Estrogen Receptor-Like Subfamily	80
3.3.2.1	Estrogen Receptor $\alpha$	80
3.3.2.2	Androgen Receptor	83
3.3.2.3	Other ER-Like Receptors	84
3.3.3	Thyroid Hormone Receptor-Like Subfamily	85
3.3.4	Retinoid X Receptor-Like Subfamily	86
3.3.5	Nerve Growth Factor 1B-Like Subfamily	87
3.3.6	Steroidogenic Factor-Like Subfamily	87
3.4	Perspectives	87

Acknowledgments	88
Abbreviations	88
References	89
<b>4</b>	<b>The Role of HATs and HDACs in Cell Physiology and Disease</b> 101
	<i>Irene Santos-Barriopedro, Helena Raurell-Vila, and Alejandro Vaquero</i>
4.1	Introduction 101
4.2	HATs and HDACs 102
4.2.1	HATs 102
4.2.1.1	HAT Complexes 103
4.2.2	HDACs 104
4.2.2.1	HDAC Complexes in Transcription 105
4.3	Acetylation/Deacetylation in Chromatin-Associated Functions 107
4.3.1	HATs, HDACs, and Transcription 107
4.3.1.1	Interplay between HATs/HDACs and Transcription Factors 108
4.3.2	Chromatin Structure and Heterochromatin 110
4.3.3	HATs and HDACs in DNA Repair 111
4.4	HATs and HDACs in Cell Physiology 113
4.4.1	Cell-Cycle Regulation 113
4.4.2	Apoptosis, Aging, and Senescence 115
4.4.3	Differentiation and Development 117
4.4.3.1	Stem Cells 117
4.4.3.2	Embryonic Lethality and Early Development 117
4.4.3.3	Myogenesis and Osteogenesis 118
4.4.3.4	Heart Development, Angiogenesis, and Kidney Development 118
4.4.3.5	Adipose Tissue 119
4.4.3.6	Nervous System Development 119
4.4.3.7	Hematopoiesis 120
4.4.4	Metabolism 120
4.4.4.1	Lipid Metabolism 121
4.4.4.2	Glucose Metabolism 121
4.4.4.3	Other Mitochondrial Processes 122
4.4.4.4	FOXO and Metabolism 122
4.5	Associated Diseases 122
4.5.1	Cancer 123
4.5.1.1	Leukemias 125
4.5.1.2	Breast Cancer 125
4.5.1.3	Other Cancers 125
4.5.1.4	Metastasis 126
4.5.2	Vascular Diseases 126
4.5.3	Neurodegenerative Diseases 127
4.5.4	Other Diseases 127
	References 127

<b>5</b>	<b>The Short and Medium Stories of Noncoding RNAs: microRNA and siRNA</b>	<b>137</b>
	<i>Arunoday Bhan, Paromita Deb, Milad Soleimani, and Subhrangsu S. Mandal</i>	
5.1	Introduction	137
5.2	MicroRNA	140
5.2.1	Discovery of miRNAs	140
5.2.2	Biogenesis of miRNA	141
5.2.3	Processing of miRNA and its Mechanism of Action	141
5.2.4	Functional Significance of miRNA	144
5.2.4.1	Hormone Synthesis and Metabolism	146
5.2.4.2	Immune System	147
5.2.4.3	Reproduction	147
5.2.5	Association of miRNAs with Human Diseases and Cancer	148
5.3	Small Interfering RNA (siRNA)	151
5.3.1	Discovery of siRNAs	151
5.3.2	Biogenesis of siRNAs	152
5.3.3	Processing and Mechanism of Action of siRNAs	153
5.4	Piwi interacting RNA	154
5.5	Transcription Initiating RNAs (TiRNAs)	155
5.6	Small Nuclear RNAs (snRNAs)	155
5.7	Conclusion	156
	Acknowledgments	157
	Abbreviations	157
	References	157
<b>6</b>	<b>Long Noncoding RNA (lncRNA): Functions in Health and Disease</b>	<b>169</b>
	<i>Arunoday Bhan, Milad Soleimani, and Subhrangsu S. Mandal</i>	
6.1	Introduction	169
6.2	Classification of lncRNAs	170
6.3	lncRNA: Functions and Mechanisms of Action	171
6.3.1	lncRNA XIST and TSIX in Dosage Compensation and X-Inactivation	172
6.3.2	HOTAIR (HOX Antisense Intergenic lncRNA) in Gene Silencing	172
6.3.3	H19: Important in Genomic Imprinting and microRNA Biogenesis	175
6.3.4	ANRIL: Transcriptional Regulation of INK4A Locus	177
6.3.5	GAS5: Associated with Growth and Glucocorticoid Receptor-Mediated Signaling	177
6.3.6	TERRA (Telomeric Repeat-Containing RNAs) in Telomere Function	178
6.3.7	MEG3: Important Player in Genomic Imprinting	179
6.3.8	KCNQ1OT1/LIT1: Key Player in Genomic Imprinting	179
6.3.9	MALAT1 (Metastasis-Associated Lung Adenocarcinoma Transcript 1)	180

6.3.10	PCAT1	180
6.3.11	PCGEM1	180
6.4	LncRNAs in Cancer	181
6.5	LncRNAs in Reproduction	185
6.6	LncRNAs in Myogenesis	187
6.7	LncRNA in Cardiovascular Disease	189
6.8	LncRNAs in Embryonic Development and Segmentation	190
6.9	LncRNA in Central Nervous System	190
6.10	LncRNAs in Neurological Disorders	191
6.10.1.1	Importance of ATXN8OS in Spinocerebellar Ataxia 8	192
6.10.1.2	Role of DISC1 and DISC2 in Schizophrenia and Neuronal Hyperexcitability	192
6.10.1.3	UBE3A-AS in Prader–Willi Syndrome (PWS) and Angelman Syndrome	193
6.11	LncRNA in Immune System and Immunological Disorders	193
6.12	Roles of lncRNAs in Various Heritable Syndromes	194
6.13	Conclusion	195
	Acknowledgments	196
	Abbreviations	196
	References	197
<b>7</b>	<b>Histone Variants: Structure, Function, and Implication in Diseases</b>	<b>209</b>
	<i>Francisca Alvarez and Alejandra Loyola</i>	
7.1	Histone Variants: Structure	209
7.1.1	Histone Proteins Have Sequence Variants	209
7.1.2	Histones are Posttranslationally Modified	211
7.1.3	Nucleosome Structure	213
7.1.3.1	Histone H2A Variants	214
7.1.3.2	Histone H3 Variants	218
7.2	Implication in Diseases	219
	Acknowledgments	221
	References	221
<b>8</b>	<b>Genomic Imprinting in Mammals: Origin and Complexity of an Epigenetically Regulated Phenomenon</b>	<b>227</b>
	<i>Elena de la Casa-Espesón</i>	
8.1	Introduction: First Evidences and Extent of Genomic Imprinting	227
8.1.1	The Discovery of Imprinted Gene Expression	227
8.1.2	How Many Imprinted Genes?	228
8.2	Imprinted Genes: Common Features and Diversity of Regulatory Mechanisms	229
8.2.1	Imprinted Domains and the Elements That Control Them	229
8.2.2	Imprinted Expression Can Be Regulated in Multiple Ways	231
8.3	Role of Imprinted Noncoding RNAs on Imprinting Control and Other Functions	233

8.4	Parent-of-Origin-Dependent Epigenetic Marks and the Role of Chromatin Modifications and Interactions in Imprinting	234
8.4.1	Origin and Function of Differentially Methylated Regions in Imprinted Domains	234
8.4.2	The Contribution of Histone Modifications to Imprinting Control	237
8.4.3	Nuclear Location and Diverse Types of Interactions May also Play a Role in the Regulation of Imprinted Genes	237
8.5	Imprinted Genes: Functions and Associated Diseases	238
8.5.1	Mutations and Epimutations of Imprinted Loci Result in Diverse Disorders	238
8.5.2	Consequences of Loss of Imprinting	239
8.6	Origin and Evolution of Imprinting	241
8.6.1	Why Is There Imprinting?	241
8.6.2	When and How Did Imprinted Expression Emerge at Diverse Genes?	244
8.7	Summary and Conclusion	246
	Acknowledgments	247
	References	247

**9 Centromere and Kinetochore: Essential Components for Chromosome Segregation** 259

*Shreyas Sridhar, Arti Dumbrepatil, Lakshmi Sreekumar, Sundar Ram Sankaranarayanan, Krishnendu Guin, and Kaustuv Sanyal*

9.1	Introduction	259
9.1.1	Distinguishing Features of Mitosis	261
9.1.1.1	Fungi	261
9.1.1.2	Animals	261
9.1.1.3	Plants	261
9.1.1.4	Protozoa	262
9.2	Centromeres	262
9.2.1	Diversity in Organization of DNA Elements Across Centromeres	263
9.2.1.1	Fungi	263
9.2.1.2	Animals	266
9.2.1.3	Plants	267
9.2.1.4	Protozoa	268
9.3	Kinetochores	269
9.3.1	Kinetochores Architecture	270
9.3.2	Centromere DNA-Associated Layer	270
9.3.2.1	Constitutive Centromere-Associated Network (CCAN)	270
9.3.3	Microtubule Interacting Layer	272
9.3.3.1	KMN Network	272
9.3.4	Kinetochores Assembly	273
9.3.4.1	Fungi	273

9.3.4.2	Animals	274
9.3.4.3	Plants	275
9.3.4.4	Protozoa	275
9.4	Neocentromere	276
9.4.1	Naturally Occurring Neocentromeres	276
9.4.1.1	Humans	276
9.4.1.2	Plants	277
9.4.2	Artificially Induced Neocentromeres	277
9.4.2.1	Fungi	277
9.4.2.2	Animals	278
9.4.3	Factors Relating to Neocentromere/Centromere Formation	278
9.4.3.1	Centromere-Associated Proteins	278
9.4.3.2	Chromatin	278
9.4.3.3	Replication Timing	278
9.5	Conclusions	279
	Acknowledgment	280
	References	280
<b>10</b>	<b>Nuclear Receptors and NR-coregulators: Mechanism of Action and Cell Signaling</b>	<b>289</b>
	<i>Arunoday Bhan and Subhrangsu S. Mandal</i>	
10.1	Introduction	289
10.2	Structures of Nuclear Receptors	292
10.3	Mode of Action of Nuclear Receptors	295
10.4	Nuclear Receptor Coregulators	297
10.4.1	NR-Coactivators	298
10.4.1.1	ATP-Dependent Chromatin Remodelers	298
10.4.1.2	Histone Acetyltransferases	299
10.4.1.3	Histone Methyltransferases and Demethylases in NR-Regulated Gene Expression	301
10.4.1.4	Histone Demethylase	302
10.4.1.5	PGC-1 $\alpha$ (Peroxisome Proliferator-Activated Receptor Gamma Coactivator 1-Alpha) as NR-Coactivator	306
10.4.1.6	Proline-, Glutamic Acid-, Leucine-Rich Protein 1 (PELP1) as NR-Coactivator	306
10.4.2	Corepressors	306
10.4.3	Noncoding RNA (ncRNA) as NR-Coregulators	308
10.5	NRs and NR-Coregulators in Human Diseases	308
10.6	NRs and NR-Coregulators as Drug Targets	310
10.7	Conclusion	313
	Acknowledgments	313
