Preface XXIII

List of Contributors XXV

Volume 1

Part One Modeling and Theory 1

1	Charge Transport in Organic Semiconductors: A Multiscale Modeling	3
	<i>Nicolas Martinelli, Yoann Olivier, Luca Muccioli, Andrea Minoia, Patrick Brocorens, Mari-Carmen Ruiz Delgado, Claudio Zannoni, David Beljonne, Roberto Lazzaroni, Jean-Luc Brédas, and Jérôme Cornil</i>	
1.1	Introduction	3
1.2	Organic Single Crystals	6
1.2.1	Molecular Parameters for Charge Transport	6
1.2.2	Influence of Intermolecular Vibrations	9
1.2.3	Charge Mobility Values	13
1.3	Tetrathiafulvalene Derivatives	15
1.4	Polythiophene Derivatives	18
1.5	Phthalocyanine Stacks	22
1.5.1	Structural Properties	22
1.5.2	Charge Transport Properties	25
1.6	Polymer Dielectrics	27
1.6.1	Electrostatic Disorder	29
1.6.2	Charge Mobility Values	29
1.7	Outlook	31
	References	33
2	Monte Carlo Studies of Phase Transitions and Cooperative Motion in Langmuir Monolayers with Internal Dipoles	39
	<i>Christopher B. George, Mark A. Ratner, and Igal Szleifer</i>	
2.1	Introduction	39
2.2	Computational Details	40

2.3	Results and Discussion	42
2.3.1	Uncharged System	42
2.3.2	Charged System	45
2.4	Summary	49
	References	51
3	Molecules on Gold Surfaces: What They Do and How They Go Around to Do It	55
	<i>Nadja Sändig and Francesco Zerbetto</i>	
3.1	Introduction	55
3.2	A Simple Description of the Geometrical Structure of Metals	57
3.3	A Simple Description of the Geometrical Structure of Molecules	58
3.4	Electronegativity Governs Chemical Interactions: Charge Equilibration, QEq, Models	58
3.5	A Simple Description of the Interaction between Metal Surfaces and Molecules	59
3.6	Presence of an External Electric Potential or Field	60
3.7	Generality of the Model and Its Transferability	60
3.8	Thiolates on Gold	61
3.9	Adsorption of a Large Molecule: C ₆₀	65
3.10	Simple Packing Problems	67
3.11	The Presence of an Electrostatic Potential	69
3.12	Challenges and Conclusion	71
	References	72
Part Two	Supramolecular Synthetic Chemistry	79
4	Conjugated Polymer Sensors: Design, Principles, and Biological Applications	81
	<i>Mindy Levine and Timothy M. Swager</i>	
4.1	Introduction	81
4.1.1	Amplification	81
4.1.2	Role of Dimensionality and Sensory Mechanism	82
4.2	Water Solubility	83
4.2.1	Conjugated Polyelectrolytes	83
4.2.2	Nonspecific Binding	84
4.2.3	Nonionic Water-Soluble Polymers	86
4.3	Protein Detection	89
4.3.1	Introduction	89
4.3.2	Protease Detection	89
4.3.3	Kinase and Phosphatase Detection	93
4.3.4	Lectin Detection	94
4.3.5	Other Protein Detection	95
4.3.6	Protein Conformation Detection	96
4.4	DNA Detection	97

4.4.1	Polythiophene-Based DNA Detection	97
4.4.2	FRET-Based DNA Detection	98
4.5	Bacteria Detection	101
4.5.1	Introduction	101
4.5.2	Mannose-Containing Polymers	102
4.5.3	Detection of Bacterial Excretion Products	103
4.6	Electron-Deficient Polymers	104
4.6.1	Fluorinated PPEs	104
4.7	Aggregation-Based Detection	106
4.7.1	Introduction	106
4.7.2	Detection via Polymer Quenching	106
4.7.3	Detection via Low-Energy Emission	108
4.8	Temperature-Responsive Fluorescent Polymers	112
4.8.1	Introduction	112
4.8.2	Examples	112
4.9	Nonhomogeneous Detection Schemes	115
4.9.1	Introduction	115
4.9.2	CPs Adsorbed on Surfaces	116
4.9.3	CP Particles from Collapsed Polymer Chains	119
4.10	Mechanism of Energy Transfer	122
4.10.1	Theory	122
4.10.2	Modifications to Förster Theory	123
4.10.3	Evidence for Dexter-Type Energy Migration	123
4.11	Conclusions and Future Directions	127
	References	128
5	Chromophoric Polyisocyanide Materials	135
	<i>Bram Keereweer, Erik Schwartz, Stéphane Le Gac, Roeland J.M. Nolte, Paul H. J. Kouwer, and Alan E. Rowan</i>	
5.1	Introduction	135
5.2	Polyisocyanide Materials	137
5.3	Perylene Polyisocyanides in Devices	143
5.4	TFT Devices	147
5.5	Morphology Control in Perylene/Crystal Systems	147
5.6	Postmodification of Polyisocyanopeptides	149
5.7	Toward Larger Length Scales: Polyisocyanopeptide Brushes	151
5.8	Summary and Outlook	152
	References	152
6	Functional Polyphenylenes for Supramolecular Ordering and Application in Organic Electronics	155
	<i>Martin Baumgarten and Klaus Müllen</i>	
6.1	Introduction	155
6.2	Conjugated Polymers	156
6.2.1	Linear and Ladderized Polyphenylenes	156

6.2.2	Polycyclic Aromatic Hydrocarbon-Based Conjugated Polymers	160
6.2.3	Polyphenylene Macrocycles	164
6.2.4	Donors and Donor–Acceptor Approaches	168
6.2.4.1	Defined Oligomers of Heteroacenes	168
6.2.4.2	Poly(benzodithiophene)s	169
6.2.4.3	Poly(cyclopentadithiophene-benzothiadiazole)	171
6.3	Graphene Molecules and Their Alignment	173
6.3.1	Extended Size Nanographene Molecules	173
6.3.2	Polymeric Extensions to Graphene Layers	176
6.3.3	Variation of the Aromatic Core and Its Symmetry	177
6.3.4	Influence of the Side Chains and Their Polarities	179
6.4	Rylenes Dyes	183
6.4.1	Core-Extended Rylenes	183
6.4.2	Rylenes for Ambipolar Field-Effect Transistors	185
6.4.3	Rylenes for Solar Cell Applications	186
6.5	Dendritic Polyphenylenes: The Three-Dimensional Case	187
6.6	Conclusion and Outlook	189
	References	190

7 Molecular Tectonics: Design of Hybrid Networks and Crystals Based on Charge-Assisted Hydrogen Bonds

Sylvie Ferlay and Mir Wais Hosseini

7.1	Introduction	195
7.2	Examples of Robust Charge-Assisted H-Bonded (CAHB) Networks	197
7.2.1	Organic Networks	197
7.2.2	Inorganic Networks	198
7.3	Charge-Assisted H-Bonded Networks Based on Amidinium Tectons	199
7.3.1	Amidinium-Based Tectons	199
7.3.2	Organic Networks Based on Amidinium Tectons	200
7.3.3	Inorganic Networks Based on Amidinium Tectons	201
7.3.3.1	Metallatectons Bearing a Carboxylate at Their Periphery	201
7.3.3.2	Oxalatometallate as H-Bond Acceptor	202
7.3.3.3	Thiocyanatometallate as H-Bond Acceptor	203
7.3.3.4	Polycyanometallate as H-Bond Acceptor	204
7.4	Charge-Assisted H-Bonded Networks Based on Amidinium and Polycyanometallate Tectons	205
7.4.1	Octahedral Cyanometallate Anions	205
7.4.1.1	$[M^{III}(CN)_6]^{3-}$ and 2-2H ⁺ or 3-2H ⁺ (M = Fe, Co, and Cr)	205
7.4.1.2	$[M^{III}(CN)_6]^{3-}$ and 4-2H ⁺ (M = Fe, Co, and Cr)	207
7.4.1.3	$[M^{II}(CN)_6]^{4-}$ with 2-2H ⁺ or 4-2H ⁺ (M = Fe and Ru)	208
7.4.1.4	$[M^{II}(CN)_6]^{4-}$ with 3-2H ⁺ (M = Fe and Ru)	208
7.4.1.5	$[M^{II}(CN)_6]^{4-}$ with 4-2H ⁺ (M = Fe and Ru)	209
7.4.2	Pentadentate Cyanometallate Anions, $[Fe^{II}(CN)_5NO]^{2-}$ and 2-2H ⁺	210
7.4.3	Square Planar Cyanometallate Anions	212

7.4.3.1	$[M^{II}(CN)_4]^{2-}$ and 2- $2H^+$ or 4- $2H^+$ ($M = Ni, Pd$, and Pt)	212
7.4.3.2	$[M^{II}(CN)_4]^{2-}$ and 3- $2H^+$ ($M = Ni, Pd$, and Pt)	213
7.4.4	Linear Cyanometallate Anions $[M^I(CN)_2]^-$ ($M = Ag$ and Au)	214
7.5	Properties of Charge-Assisted H-Bonded Networks Based on Amidinium Tectons	215
7.5.1	Luminescence	215
7.5.2	Porosity	215
7.5.3	Redox Properties in the Solid State	217
7.5.3.1	Reduction in the Solid State	218
7.5.3.2	Formation of Mixed Valence Compounds	218
7.6	Design of Crystals Based on CAHB Networks	218
7.6.1	Solid Solutions	219
7.6.1.1	Solid Solutions Using $(2-2H^+)_2([M^{II}(CN)_6])(M = Fe$ and $Ru)$	219
7.6.1.2	Solid Solutions Using $(X-2H^+)_3([M^{III}(CN)_6])_2$ ($X = 2$ or 3 , $M = Fe$, Cr , or Co)	219
7.6.2	Epitaxial Growth of Isostructural Crystals	220
7.6.2.1	Principles and Examples	220
7.6.2.2	Study of the Interface	222
7.6.2.3	<i>In Situ</i> Study of the Growth	223
7.7	Conclusion	224
	References	225
8	Synthesis and Design of π-Conjugated Organic Architectures Doped with Heteroatoms	233
	<i>Simon Kervyn, Claudia Aurisicchio, and Davide Bonifazi</i>	
8.1	Introduction	233
8.2	Boron	234
8.2.1	Boron Connected to Aryl Unit	235
8.2.1.1	Boron Derivatives Used as Chemical Sensors	235
8.2.1.2	Covalent Organic Frameworks	242
8.2.1.3	Boron Connected to Electron-Rich Aryls Groups	243
8.2.1.4	Vinyl Borane	249
8.2.2	Boron Inserted into Aryl Unit	251
8.2.2.1	Borabenzene	251
8.2.2.2	Boranaphthalene and Higher Acenes	252
8.2.2.3	Borepin	255
8.3	Sulfur, Selenium, and Tellurium	257
8.3.1	Sulfur	258
8.3.1.1	Oligothiophene-Based Structures	258
8.3.2	Selenium and Tellurium	267
8.3.2.1	Selenium-Doped Macroyclic Structures	267
8.3.2.2	Selenium- and Tellurium-Annulated Aromatic Structures	269
8.4	Miscellaneous	271
8.5	Conclusions	276
	References	277

Part Three Nanopatterning and Processing 281

9	Functionalization and Assembling of Inorganic Nanocontainers for Optical and Biomedical Applications 283
	<i>André Devaux, Fabio Cucinotta, Seda Kehr, and Luisa De Cola</i>
9.1	Introduction 283
9.2	Zeolite L as Inorganic Nanocontainers 285
9.2.1	General Concept for Nanocontainers 285
9.2.1.1	The Internal Cavity System 287
9.2.1.2	The Pore Openings 287
9.2.1.3	The External Surface 288
9.2.2	A Practical Sample Material: Zeolite L 288
9.3	Functionalization of Zeolites: Host–Guest Chemistry and Surface and Channel Functionalizations 290
9.3.1	Inorganic–Organic Host–Guest Systems 290
9.3.2	Dye Loading of Zeolites 291
9.3.2.1	Inserting Molecules 291
9.3.2.2	Doping of Zeolites with Rare Earth Ions 293
9.3.3	Functionalization of the External Surface 294
9.3.3.1	Reactions with the Whole External Surface of Zeolite L 294
9.3.3.2	Selective Functionalization of the Channel Entrances 294
9.3.4	More Complex Functionalizations 295
9.3.5	Metal–Organic Frameworks as Host Materials 296
9.4	Photoinduced Processes in Zeolites 297
9.4.1	Förster Resonance Energy Transfer 298
9.4.2	Electron Transfer 300
9.4.3	Aggregates Formation in Nanochannels 303
9.5	Self-Assembly in Solution and on Surfaces 305
9.5.1	Self-Assembly in Solution 305
9.5.2	Self-Assembly on Surfaces 309
9.5.2.1	Zeolite L Monolayers: Synthesis and Characterization 309
9.6	Possible Optical and Biomedical Applications of Nanocontainers 312
9.6.1	Optical Applications 312
9.6.1.1	Hybrid Solar Cells 313
9.6.1.2	Hybrid Light-Emitting Devices (LEECs and LEDs) 314
9.6.2	Biomedical Applications 316
	References 323
10	Soft Lithography for Patterning Self-Assembling Systems 343
	<i>Xuexin Duan, David N. Reinhoudt, and Jurriaan Huskens</i>
10.1	Introduction 343
10.2	Self-Assembling Systems 344
10.3	Soft Lithography 345
10.3.1	Microcontact Printing 345
10.3.2	Micromolding Injection in Capillaries 346

10.3.3	Main Limitations of Soft Lithography	347
10.4	Contact Printing of SAMs with High Resolution	349
10.4.1	Improvements of the Stamp	350
10.4.1.1	Hard PDMS and Composite Stamps	350
10.4.2	Other Stamp Materials	351
10.4.3	Flat Stamps	351
10.4.4	New Ink Materials	353
10.4.5	Alternative μCP Strategies	354
10.4.5.1	High-Speed μCP	354
10.4.6	Catalytic Printing	355
10.5	Soft Lithography to Pattern Assemblies of Nanoparticles	355
10.5.1	Patterning by Contact Printing	356
10.5.1.1	Nanoparticles as Inks	356
10.5.1.2	Convective Assembly	357
10.5.1.3	Templated Assembly	359
10.5.2	Patterning by Micromolding in Capillaries	359
10.5.3	Patterning by Soft Lithography with Solvent Mediation	360
10.6	Soft Lithography Pattern Supramolecular Assembly	361
10.6.1	Affinity Contact Printing	361
10.6.2	Supramolecular Nanostamping	362
10.6.3	Molecular Printboards	363
10.7	Concluding Remarks	364
	References	365
11	Colloidal Self-Assembly of Semiconducting Polymer Nanospheres: A Novel Route to Functional Architectures for Organic Electronic Devices	371
	<i>Evelin Fisslthaler and Emil J. W. List</i>	
11.1	Introduction	371
11.2	Formation of Semiconducting Polymer Nanospheres	372
11.3	Driving Forces behind Nanoparticle Self-Assembly Processes	373
11.4	Deposition Methods for Aqueous Dispersions of Semiconducting Polymer Nanospheres	377
11.5	Organic Electronic Devices from Semiconducting Polymer Nanospheres	380
11.5.1	Organic Electronic Devices from SPNs with Homogeneous Functional Layers	382
11.5.2	Functional Micro- and Nanopatterns from SPNs for Organic Electronic Devices	382
11.5.2.1	Functional Micro- and Nanopatterns from SPNs Formed by Ink-Jet Printing and Template-Assisted Self-Assembly	385
11.5.2.2	Functional Micro- and Nanopatterns from SPNs Formed by Micromolding in Capillaries and Template-Assisted Fluidic Self-Assembly	389
11.6	Conclusions	393
	References	395

12	Photolithographic Patterning of Organic Electronic Materials	399
	<i>John DeFranco, Alex Zakhidov, Jin-Kyun Lee, Priscilla Taylor, Hon Hang Fong, Margarita Chatzichristidi, Ha Soo Hwang, Christopher Ober, and George Malliaras</i>	
12.1	Introduction	399
12.1.1	Patterning Requirements in Organic Electronics	399
12.1.2	Common Methods of Patterning Organic Electronic Materials	401
12.1.2.1	Solution-Deposited Materials	401
12.1.2.2	Vapor-Deposited Materials	403
12.1.3	Photolithographic Patterning Techniques	403
12.2	Photolithographic Methods for Patterning Organic Materials	406
12.2.1	Hybrid Techniques	406
12.2.2	Organic Materials Directly Processed with UV Light	406
12.2.3	Materials Choice or Modification	408
12.2.4	Patterning with an Interlayer	409
12.2.5	Modification of the Resist Chemistry	412
12.3	Conclusions and General Considerations	415
	References	415
Part Four	Scanning Probe Microscopies	421
13	Toward Supramolecular Engineering of Functional Nanomaterials: Preprogramming Multicomponent 2D Self-Assembly at Solid–Liquid Interfaces	423
	<i>Carlos-Andres Palma, Artur Ciesielski, Massimo Bonini, and Paolo Samori</i>	
13.1	Introduction	423
13.2	van der Waals Interactions	425
13.2.1	Adsorption	425
13.3	Hydrogen–bonding Interactions	433
13.3.1	Weak and Single Hydrogen Bonds	433
13.3.2	Carboxylic Acids as Dihapto Hydrogen–bonding Moieties: Chirality and Polymorphism	434
13.3.3	Combined Dihapto Hydrogen–bond and van der Waals Interactions	437
13.3.4	Trihapto Hydrogen–bonding Moieties	439
13.3.5	Tetrahapto Hydrogen–bonding Moieties	441
13.4	Metal–Ligand Interactions	441
13.5	Conclusions and Outlook	445
	References	446
14	STM Characterization of Supramolecular Materials with Potential for Organic Electronics and Nanotechnology	457
	<i>Kevin R. Moonosawmy, Jennifer M. MacLeod, and Federico Rosei</i>	
14.1	Introduction	457

14.2	Characterization Using STM and Related Technologies	458
14.2.1	The Capabilities of STM	458
14.2.1.1	High-Resolution Imaging	458
14.2.1.2	Electronic Characterization	459
14.2.1.3	Manipulation and Synthesis with the STM	459
14.2.2	Modified STM Systems for Specialized Probing of Electronic, Magnetic, and Photonic Properties	460
14.2.2.1	Two- and Four-Probe STM Systems	460
14.2.2.2	Spin-Polarized STM	461
14.2.2.3	Light-Emission STM	461
14.3	Molecular Systems with Applications in Electronics	462
14.3.1	Thiophenes	462
14.3.1.1	Thiophene Layers	462
14.3.1.2	Host–Guest Systems Containing Thiophenes and Fullerenes	464
14.3.2	Influence of Symmetry on Adsorption of Rubrene	464
14.4	Optically Active Molecules	467
14.4.1	Obliqueness of Chiral Unit Cell and its Angular Mismatch	469
14.4.2	Height Difference Revealed by Contrast	470
14.4.3	STM Reveals the Nature of First Layer Growth	471
14.5	Magnetic Systems	472
14.5.1	The Spin–Electron Interaction	472
14.5.2	Metal–Organic Coordination Networks	473
14.5.3	Controlling Magnetic Anisotropy of Supramolecular MOCN	474
14.6	STM Characterization and Biological Surface Science	475
14.6.1	Probing the Fundamentals of Life	475
14.6.2	Bionanotechnological Applications	477
14.7	Using the STM to Initiate Chemical Reactions	478
14.7.1	Molecular Dissociation	478
14.7.2	Molecular Synthesis	479
14.7.3	Inducing Reactions Over a Larger Spatial Extent	480
14.8	Conclusions and Perspective	481
	References	483
