

## Contents

	<b>Dedication</b>	<i>V</i>
	<b>Foreword</b>	<i>VII</i>
	<b>Preface and Acknowledgment</b>	<i>XVII</i>
	<b>List of Credits for Images</b>	<i>XXV</i>
<b>1</b>	<b>Evolution of Drug Discovery</b>	<i>1</i>
1.1	Antiquity	<i>1</i>
1.1.1	Greek and Roman Pharmacy	<i>3</i>
1.1.2	Arabian Period	<i>6</i>
1.1.3	Discovery of America	<i>8</i>
1.1.4	The Renaissance	<i>9</i>
1.1.5	Nineteenth Century	<i>11</i>
1.2	Great Periods of Drug Discovery	<i>15</i>
1.3	Vaccines	<i>17</i>
1.3.1	Conjugate Vaccines	<i>21</i>
	References	<i>21</i>
	Further Reading	<i>22</i>
<b>2</b>	<b>The First Synthetic Drugs and the Birth of Chemotherapy</b>	<i>23</i>
2.1	Aspirin, Phenacetin, and Paracetamol	<i>24</i>
2.1.1	Aspirin®	<i>24</i>
2.1.2	Acetanilide	<i>24</i>
2.1.3	Acetophenetidin	<i>25</i>
2.1.4	Paracetamol	<i>25</i>
2.2	Discovery of Pyrazolones	<i>26</i>
2.3	Cocaine and Local Anesthetics	<i>27</i>
2.4	Barbiturates and Related Compounds	<i>34</i>
2.4.1	From Hypnotic Barbiturates to Anticonvulsant/Antiepileptic (Antiseizure) Drugs	<i>36</i>
2.5	Fathers of Chemotherapy	<i>38</i>
2.5.1	The Magic Bullet of Paul Ehrlich	<i>38</i>
2.5.1.1	Fight against Trypanosomiasis	<i>39</i>

2.5.1.2	Suramin or Germanin	44
2.5.2	Dr. Ernest Fourneau's Legacy	45
2.5.3	Dr. Gerhard Domagk's Prontosil	46
	References	52
<b>3</b>	<b>From Casual Observations to Systematic Search</b>	<b>53</b>
3.1	From Antihistamines to Antipsychotics and Antidepressants: The Origins of Psychopharmacology	54
3.1.1	Neuroleptics, Phenothiazines, and Chlorpromazine: The First Neuroleptic	54
3.1.2	Tricyclic Antidepressants/Antihistamines – Imipramine: The First Antidepressant, and Cyproheptadine and Related Drugs	59
3.1.3	Butyrophenone Neuroleptics: Haloperidol	62
3.2	Benzodiazepines	65
3.3	Structural Variations on Sulfanilamide	69
3.3.1	Diuretic Sulfonamides	69
3.3.2	Antiglaucoma Sulfonamides	75
3.3.3	Antihyperglycemic Sulfonylureas	77
3.3.4	Sulfonamides in Veterinary Medicine	78
3.3.5	Mycobacterial Diseases: Leprosy and Tuberculosis	79
3.3.5.1	Chemotherapy of Leprosy	79
3.3.5.2	Tuberculostatic Thiosemicarbazones: Isoniazid (Isonicotinic Acid Hydrazide)	81
3.4	Azoles as a Source of Antibacterials, Antifungals, and Anthelmintics	85
3.4.1	Azoles as Antibacterials	85
3.4.2	Azole Derivatives as Antifungals	86
3.4.3	Anthelmintics	91
3.5	The Long Fight against Cancer	95
3.5.1	DNA Cross-Linking Agents	96
3.5.1.1	Nitrogen Mustard Alkylators	96
3.5.1.2	Organoplatinum Complexes	100
3.6	Sildenafil – The First Inhibitor of Erectile Dysfunction	100
	References	103
	Further Reading	105
<b>4</b>	<b>Nature as a Source of Drugs: Drugs from Natural Products</b>	<b>107</b>
4.1	Plant Sources: Derivatives and Related Drugs (Selected Examples)	107
4.1.1	Cardiac Glycosides: Digitalis and Strophanthus	107
4.1.2	Rauwolfia	111
4.1.3	Opium	111
4.1.3.1	Morphine	112
4.1.3.2	Structural Variations on Morphine: Morphinans and Benzomorphans	114

- 4.1.3.3 Structural Variations on Morphine: Meperidine and Methadone – Two Outstanding Analgesic Drugs 118
- 4.1.3.4 Structural Variations on Morphine: Buprenorphine 121
- 4.1.4 Malaria: From Cinchona Bark to Synthetic Antimalarial Drugs and Chinese Artemisinines 124
  - 4.1.4.1 Cinchona Bark 126
  - 4.1.4.2 Quinine Structure 129
  - 4.1.4.3 Synthetic Antimalarial Drugs of the Acridine and Quinoline Series 131
  - 4.1.4.4 Artemisinins 137
- 4.1.5 Atropine as a Prototype of Anticholinergic Drugs 139
  - 4.1.5.1 Drugs from Structural Variations on Atropine 144
- 4.1.6 From Sweet Clover to Rat Poison: Coumarin-Based Anticoagulants, Warfarin, and Acenocoumarol 146
- 4.1.7 Khellin as a Source of Coronary Dilators: Calcium Channel Blockers and other Related Derivatives 149
- 4.1.8 Antitumor Drugs from Plants: Podophyllotoxin, Vinca Alkaloids, Camptothecin, and Taxanes 155
  - 4.1.8.1 Podophyllotoxin 155
  - 4.1.8.2 Vinca Alkaloids 157
  - 4.1.8.3 Camptothecin 159
  - 4.1.8.4 Paclitaxel (Taxol®) and Docetaxel (Taxotere®) 161
- 4.1.9 Colchicum 167
- 4.2 Animal Sources: Derivatives and Related Drugs 169
  - 4.2.1 Steroid Hormones 169
    - 4.2.1.1 Sex Hormones and Derivatives: Natural and Synthetic (Non-Steroidal) Estrogens and Androgens 174
    - 4.2.1.2 Sex Hormones and Derivatives: Progestins (Progestogens) 184
    - 4.2.1.3 Cortical Hormones and Derivatives (Corticosteroids): The Mexican Yams (Dioscorea Species) 195
  - 4.2.2 Vitamin D 210
    - 4.2.2.1 Vitamin D-Based Antipsoriatic Drugs 212
- 4.2.3 Insulin 214
  - 4.2.3.1 Designer Insulins: Insulin Analogs 223
  - 4.2.4 Antithrombotic Agents 224
    - 4.2.4.1 Natural Anticoagulants: Hirudin, the Leech Anticoagulant, and Heparin 224
    - 4.2.4.2 Fibrinolytics/Thrombolytics 233
- 4.2.5 Eicosanoids 234
  - 4.2.5.1 Prostaglandins 234
  - 4.2.5.2 Leukotrienes 241
- 4.3 Drugs from Microbiological Sources 243
  - 4.3.1 Ergot Alkaloids, their Derivatives, and Related Drugs: Ergolines 243
    - 4.3.1.1 Ergot Alkaloids 243
    - 4.3.1.2 Ergolines 248

- 4.3.2 Antibiotics 250
  - 4.3.2.1 Introduction 250
  - 4.3.2.2  $\beta$ -Lactam Antibiotics: Penicillins 254
  - 4.3.2.3  $\beta$ -Lactam Antibiotics: Cephalosporins 265
  - 4.3.2.4 Other  $\beta$ -Lactam Antibiotics: Carbapenems and Monobactams 271
  - 4.3.2.5 Aminoglycosides 273
  - 4.3.2.6 Tetracyclines 278
  - 4.3.2.7 Macrolides 281
  - 4.3.2.8 Cyclopeptides 283
  - 4.3.2.9 Other Antibiotics 284
  - 4.3.3 Naturally Occurring Antifungals 287
    - 4.3.3.1 Polyene Macrolides 287
    - 4.3.3.2 Echinocandins 288
    - 4.3.3.3 Griseofulvin 288
  - 4.3.4 Anticancer Antibiotics 288
    - 4.3.4.1 Actinomycins 289
    - 4.3.4.2 Mitomycins 290
    - 4.3.4.3 Bleomycins 290
    - 4.3.4.4 Anthracyclines 291
  - 4.3.5 Antiparasitics of Microbial Origin: Avermectins 293
  - 4.3.6 Inhibitors of Cholesterol Biosynthesis – Inhibitors of Hydroxymethyl Glutaryl-Coenzyme A Reductase (HMG-CoA Reductase): Natural and Synthetic Statins 294
  - 4.3.7 The Success of Transplant Surgery – Immunosuppressants: Cyclosporin and Tacrolimus 301
- 4.4 Drugs from Marine Origin: The Contribution of the Sea to the Therapeutic Arsenal 303
  - References 306
  - Further Reading 312
- 5 Rationalizing the Drug Discovery Process 313**
  - 5.1 Early Rational Drug Discovery Approaches: L-Dopa and L- $\alpha$ -Methyldopa 313
    - 5.1.1 L-Dopa and Parkinson's Disease 314
    - 5.1.2  $\alpha$ -Methyldopa: An Early Rational Antihypertensive 317
  - 5.2 Receptor-Based Drug Discovery 320
    - 5.2.1 G-Protein-Coupled Receptors 321
    - 5.2.2 Cloning and Characterization of Human Receptors 321
    - 5.2.3 Sympathomimetic Amines: Adrenaline, Ephedrine, and Amphetamine 322
      - 5.2.3.1 Adrenaline (Epinephrine) 323
      - 5.2.3.2 D-(–)-Ephedrine 324
      - 5.2.3.3 Amphetamine 326
    - 5.2.4 Adrenergic Receptors (Adrenoceptors) 327
      - 5.2.4.1  $\beta_1$ -Adrenoceptor Agonists 327

5.2.4.2	Selective $\beta_2$ -Adrenoceptor Agonists: Pure Bronchodilators	329
5.2.4.3	$\beta$ -Adrenergic (Adrenoceptor) Antagonists ( $\beta$ -Blockers)	330
5.2.5	Acetylcholine and Cholinergic Receptors	333
5.2.5.1	Reversible Anticholinesterases	335
5.2.5.2	Anticholinesterases in Alzheimer's Disease	337
5.2.6	Dopamine and Dopamine Receptors	338
5.2.6.1	Typical and Atypical Antipsychotics (Neuroleptics)	339
5.2.7	Serotonin Receptors	342
5.2.7.1	5-HT <sub>1</sub> Receptor Agonists	344
5.2.7.2	5-HT <sub>3</sub> Receptor Antagonists: Setrons	345
5.2.7.3	5-HT <sub>4</sub> Receptor Agonists: Benzamides, Metoclopramide, and Clebopride	346
5.2.7.4	Selective Serotonin Reuptake Inhibitors (SSRIs): The Discovery of Fluoxetine and other Antidepressant Drugs	347
5.2.8	Approaches to the Control of Gastric Acid Secretion: Histamine and Histamine Receptors, H <sub>2</sub> Antihistamines	351
5.2.8.1	H <sub>2</sub> -Antihistamines	353
5.2.8.2	Definitive Approach to Gastric Acid Secretion Control, Proton Pump Inhibitors: Omeprazole	354
5.3	Antimetabolites in the Fight against Bacteria, Viruses, and Cancer	362
5.3.1	Antimetabolites	362
5.3.2	Nucleic Acids: Antimetabolites of Nucleic Acid Biosynthesis	363
5.3.3	Antifolics: Antifolic Acid Analogs (Methotrexate and Derivatives)	366
5.3.4	Legacy of Hitchings and Elion	374
5.3.4.1	Azathioprine	377
5.3.4.2	Allopurinol	377
5.3.4.3	Acyclovir and Derivatives	378
5.3.5	Viruses: Antiviral Drugs	383
5.3.5.1	Antiviral/Anticancer Nucleoside Analogs	385
5.3.5.2	Antivirals Effective against HIV-1: Nucleoside Reverse Transcriptase Inhibitors	389
5.4	Cyclooxygenase(COX) Inhibitors	393
5.4.1	Platelet Aggregation Inhibitors	393
5.4.2	COX Inhibitors: Non-Steroidal Antiinflammatory Drugs (NSAIDs)	396
5.4.3	COX-2 Inhibitors (Coxibs)	399
	References	400
	Further Reading	403
<b>6</b>	<b>Structure-Based Drug Discovery</b>	<b>405</b>
6.1	Searching for the Ideal Antihypertensive Agent: Renin-Angiotensin-Aldosterone System (RAAS)	405
6.1.1	ACE Inhibitors – Ferreira's Peptides. Captopril and Enalapril	407
6.1.2	Angiotensin II Receptor Antagonists	413

6.1.3	Renin Inhibitors	414
6.2	HIV Protease Inhibitors	419
6.3	Drugs Effective against the Influenza Virus (the Flu)	421
6.3.1	Neuraminidase Inhibitors	421
6.4	Fight against Cancer	425
6.4.1	Innovative Approaches in the Search for Anticancer Therapies	428
6.4.2	Tyrosine Kinase Inhibitors: Imatinib	429
6.5	New Avenues for the Development of Antidiabetic Agents. Dipeptidyl-Peptidase-IV Inhibitors: Sitagliptin and Vildagliptin	434
	References	439
<b>7</b>	<b>Biopharmaceuticals</b>	<b>441</b>
7.1	Monoclonal Antibodies (MAbs)	442
7.1.1	Conjugated Antibodies	447
7.2	Recombinant DNA Technology (Genetic Engineering)	448
7.2.1	Gene Production	450
7.2.2	Construction of Recombinant DNA	451
7.2.3	Cloning	452
7.2.4	Isolation and Purification of the Recombinant Protein	452
7.3	Some Recombinant Protein Drugs	453
7.3.1	Recombinant Human Insulin	454
7.3.2	Interferons	454
7.3.3	Hemopoietic Factors: Erythropoietin	455
7.3.4	Somatropin/Somatotropin: hGH	456
7.3.5	Vaccines	457
7.4	Protein–Polyethyleneglycol (PEG) Conjugates (Protein PEGylation)	458
	References	459
	Further Reading	459
<b>8</b>	<b>Drug Discovery in the Postgenomic Era: Concluding Remarks</b>	<b>461</b>
8.1	Chemical/Genomic Strategy	464
8.2	Summary	465
	References	466
