Preface *XV*

Part One Microscopy Fundamentals 1

1 Introduction 3

References 6

2 Scanning Probe Microscopy Basics 9

2.1 Basic Principles of Scanning Probe Microscopy 9

2.2 Scanning Tunneling Microscopy 10

2.3 Advent of Atomic Force Microscopy 10

2.4 Overview of Instrumentation 11

2.4.1 Scanners 11

2.4.2 Microcantilevers as Force Sensors 12

2.4.3 Electronic Feedback 15

2.5 Probes and Cantilevers in Scanning Probe Microscopy 16

2.5.1 Physical Attributes of Microcantilevers 18

2.5.2 Tip Characterization 21

2.5.3 Tip Modification 23

2.6 Modes of Operation 24

2.6.1 Contact Mode 25

2.6.2 Noncontact Mode and Tapping Mode 26

2.7 Advantages and Limitations 28

References 29

3 Basics of Atomic Force Microscopy Studies of Soft Matter 35

3.1 Physical Principles: Forces of Interaction 35

3.1.1 Long-Range Forces 36

3.1.2 Short-Range Forces 36

3.1.3 Other Forces of Interaction 38

3.1.4 Resolution Criteria 40

3.1.5	Scan Rates and Resonances	41
3.2	Imaging in Controlled Environment	42
3.2.1	AFM Imaging in Liquid	42
3.2.2	AFM at Controlled Temperature	44
3.2.3	Imaging in Controlled Humidity	44
3.3	Artifacts in AFM Imaging of Soft Materials	46
3.3.1	Surface Damage and Deformation	47
3.3.2	Tip Dilation	47
3.3.3	Damaged and Contaminated Tip or Surface	48
3.3.4	Noises and Vibrations	50
3.3.5	Tip Artifacts	51
3.3.6	Thermal Drift and Piezoelement Creep	53
3.3.7	Oscillations and Artificial Periodicities	55
3.3.8	Image Processing Artifacts	56
3.4	Some Suggestions and Hints for Avoiding Artifacts	59
3.4.1	Tip Testing and Deconvolution	59
3.4.2	Force Control	61
3.4.3	Tip Contamination and Cleaning	63
	References	65
4	Advanced Imaging Modes	69
4.1	Surface Force Spectroscopy	69
4.1.1	Introduction to Force Spectroscopy	69
4.1.2	Force–Distance Curves	70
4.1.3	Force Mapping Mode	72
4.2	Friction Force Microscopy	72
4.3	Shear Modulation Force Microscopy	74
4.4	Chemical Force Microscopy (CFM)	75
4.5	Pulsed Force Microscopy	77
4.6	Colloidal Probe Microscopy	78
4.7	Scanning Thermal Microscopy	79
4.7.1	Thermal Resistive Probes and Spatial Resolution	81
4.7.2	Localized Thermal Analysis	82
4.7.3	Thermal Conductivity	83
4.8	Kelvin Probe and Electrostatic Force Microscopy	86
4.9	Conductive Force Microscopy	88
4.10	Magnetic Force Microscopy	89
4.11	Scanning Acoustic Force Microscopy	90
4.11.1	Force Modulation	90
4.11.2	Ultrasonic Force Microscopy	90
4.12	High-Speed Scanning Probe Microscopy	92
	References	94

Part Two	Probing Nanoscale Physical and Chemical Properties	99
5	Mechanical Properties of Polymers and Macromolecules	101
5.1	Elements of Contact Mechanics and Elastic Modulus	102
5.1.1	General SFS Nanoprobing Principles	102
5.1.2	Substrate Effects	106
5.1.3	Issues and Key Assumptions with Nanomechanical Probing	108
5.2	Probing of Elastic Moduli for Different Materials: Selected Examples	112
5.2.1	Bulk Materials and Blends	112
5.2.2	Ultrathin Polymer Films from Different Polymers	117
5.2.3	Probing Individual Macromolecules	122
5.3	Adhesion Measurements	125
5.4	Viscoelasticity Measurements	131
5.5	Friction	135
5.6	Unfolding of Macromolecules	139
	References	144
6	Probing of Microthermal Properties	153
6.1	Introduction	153
6.2	Measurements of Glass Transition	154
6.2.1	Ultrathin Polymer Films	154
6.2.2	Polymer Brushes	155
6.2.3	Thin Films from Polymer Blends	157
6.2.4	Depth Variation of Glass Transition in Photodegradable Polymers	159
6.3	Melting, Crystallization, and Liquid Crystalline Phase Transformations	160
6.4	Thermal Expansion of Microstructures	165
6.5	Surface Thermal Conductivity	169
	References	173
7	Chemical and Electrical Properties	175
7.1	Chemical Interactions	175
7.1.1	Chemical Interactions between Molecular Assemblies	176
7.1.2	Chemical Interactions of Polymer Surfaces	179
7.2	Electrochemical Properties	182
7.3	Work Function and Surface Potential	183
7.3.1	Effect of Tip Shape on Surface Potential and Work Function Measurements	184
7.3.2	Surface Potential and Work Function of Molecular and Polymeric Surfaces	185
7.3.3	Surface Potential and Work Function of Low-Dimensional Carbon Systems	187

7.4	Conductivity	188
7.4.1	Conductive Probes	190
7.4.2	Effect of Tip–Sample Interaction on Conductivity Measurements	191
7.4.3	C-AFM of Polymeric and Molecular Systems	192
7.5	Magnetic Properties	194
	References	195
8	Scanning Probe Optical Techniques	199
8.1	Fundamental Principles	199
8.2	Introduction to Scanning Near-Field Optical Microscopy	199
8.2.1	Aperture NSOM	200
8.2.2	Apertureless NSOM	201
8.2.3	Artifacts in NSOM	202
8.3	Examples of NSOM Studies of Polymer and Polymer Blends	203
8.3.1	NSOM for Monitoring the Composition and Physical State	203
8.3.2	Optical Properties of Conjugated Polymers and Their Blends	205
8.4	Multicolor NSOM Measurements	206
8.5	Tip-Enhanced Raman Spectroscopy and Microscopy	207
8.6	AFM Tip-Enhanced Fluorescence	212
8.7	Integrating AFM with Fluorescence Optical Microscopy	214
8.8	Integrating AFM with Confocal Raman Microscopy	215
	References	218

Part Three Scanning Probe Techniques for Various Soft Materials 223

9	Amorphous and Poorly Ordered Polymers	225
9.1	Introduction	225
9.2	Glassy Amorphous Polymers	226
9.3	Rubbers	234
9.4	Polymer Gels	241
9.5	Interpenetrating Polymer Networks	251
	References	253
10	Organized Polymeric Materials	257
10.1	Crystalline Polymers	257
10.1.1	Polyethylene Crystals	258
10.1.2	Polypropylene Crystals and Materials	260
10.1.3	Polyethylene Oxide Crystals	263
10.1.4	Poly- ϵ -Caprolactone Crystals	266
10.1.5	Polylactic Acid Crystals	267
10.1.6	Crystalline Block Copolymers	267
10.1.7	Other Polymer Crystals	269

10.2	Liquid Crystalline Polymeric Materials	271
10.3	Periodic Polymeric Structures	275
	References	287
11	Highly Branched Macromolecules	295
11.1	Dendrimers and Dendritic Molecules	295
11.2	Brush Molecules	301
11.3	Hyperbranched Polymers	305
11.4	Star Molecules	312
11.5	Highly Branched Nanoparticles	318
	References	320
12	Multicomponent Polymer Systems and Fibers	329
12.1	Polymer Blends	330
12.2	Block Copolymers	337
12.3	Polymer Nanocomposites	346
12.4	Porous Membranes	352
12.5	Micro- and Nanofibers	356
	References	364
13	Engineered Surface and Interfacial Materials	369
13.1	Surface Brush Layers	369
	13.1.1 Homopolymer Brush Layers	371
	13.1.2 Grafted Diblock Copolymers	380
	13.1.3 Mixed Brush Layers	387
13.2	Self-Assembled Monolayers	391
	13.2.1 Growth Modes of SAMs	393
	13.2.2 Thiol SAMs	394
	13.2.3 Alkylsilane SAMs	396
	13.2.4 Nanotribological Studies	399
	13.2.5 Adsorption Control with Surface Modifications	401
13.3	Adsorbed Macromolecules on Different Substrates	404
	13.3.1 Short-Chain Linear Molecules	404
	13.3.2 Long-Chain Macromolecules	405
	13.3.3 Brush-Like Macromolecules	406
	References	409
14	Langmuir–Blodgett and Layer-by-Layer Structures	417
14.1	LbL films	418
	14.1.1 Conventional LbL Films	418
	14.1.2 Composite LbL Films	422
	14.1.3 Porous LbL Films	432
14.2	Langmuir–Blodgett Films	434
	14.2.1 Molecular Order and Defects	435

14.2.2	Mixed and Composite LB Films	441
14.2.3	Mechanical and Tribological Properties	447
	References	453
15	Colloids and Microcapsules	459
15.1	Colloids and Latexes	460
15.1.1	Individual and Aggregated Solid Microparticles	461
15.1.2	Composite Microparticles	463
15.2	Thin Shell Microcapsules	468
15.2.1	LbL Microcapsules	468
15.2.2	Hollow Biomolecular and Biotemplated Microcapsules	472
15.2.3	AFM Testing of Mechanical Properties of LbL Microcapsules	474
15.3	Replicas and Anisotropic Template Structures	477
15.3.1	Anisotropic Replicas	477
15.3.2	Colloidal Templated Crystals	479
15.4	Interfacial Adhesion between Particles and Surfaces	480
	References	484
16	Biomaterials and Biological Structures	493
16.1	Imaging Adsorbed Biomacromolecules	493
16.1.1	General Approaches and Selected Examples	493
16.1.2	Peptides	502
16.2	Probing Specific Biomolecular Interactions	504
16.2.1	General Approaches to Nanoprobing	504
16.2.2	Examples of Biomolecular Interactions	505
16.3	Mechanics of Individual Biomacromolecules	507
16.3.1	Stretching and Pulling of Long-Chain Molecules	507
16.3.2	Unfolding of Different Biomacromolecules	511
16.4	Single-Cell Elasticity	515
16.5	Lipid Bilayers as Cell Membrane Mimics	518
	References	522
Part Four	Nanomanipulation, Patterning, and Sensing	527
17	Scanning Probe Microscopy on Practical Devices	529
17.1	Electrical SPM of Active Electronic and Optoelectronic Devices	529
17.2	Magnetic Force Microscopy of Storage Devices	540
17.3	NSOM of Electrooptical Devices and Nanostructures	542
17.4	Friction Force Microscopy of Storage Media and MEMS Devices	545
	References	547
18	Nanolithography with Intrusive AFM Tip	551
18.1	Introduction to AFM Nanolithography	551
18.2	Mechanical Lithography	552

18.3	Local Oxidative Lithography	559
18.4	Electrostatic Nanolithography	561
18.5	Thermomechanical Nanolithography	567
	References	572
19	Dip-Pen Nanolithography	577
19.1	Basics of the Ink and Pen Approach	577
19.2	Writing with a Single Pen	581
19.3	Simultaneous Writing with Multiple Pens and Large-Scale DPN	587
	References	592
20	Microcantilever-Based Sensors	597
20.1	Basic Modes of Operation	597
	20.1.1 General Introduction	597
	20.1.2 Static Deflection Mode	598
	20.1.3 Dynamic Resonance Frequency Shift Mode	600
	20.1.4 Heat Sensing Behavior	601
20.2	Thermal and Vapor Sensing	603
	20.2.1 Microcantilever Thermal Sensors	603
	20.2.2 Chemical Sensors	606
20.3	Sensing in Liquid Environment	611
	References	615
	Index	623
