Contents

Preface *XV*
About the Editors *XVII*
List of Contributors *XIX*
List of Abbreviations *XXI*
Notations *XXV*

1 Introduction *1*
Henner Schmidt-Traub and Reinhard Ditz
1.1 Development of Chromatography *1*
1.2 Focus of the Book *3*
1.3 Recommendation to Read this Book *4*
References *6*

2 Fundamentals and General Terminology *7*
Andreas Seidel-Morgenstern, Michael Schulte, and Achim Epping
2.1 Principles of Adsorption Chromatography *7*
2.1.1 Adsorption Process *9*
2.1.2 Chromatographic Process *10*
2.2 Basic Effects and Chromatographic Definitions *11*
2.2.1 Chromatograms and Parameters *11*
2.2.2 Voidage and Porosity *12*
2.2.3 Influence of Adsorption Isotherms on Chromatogram Shapes *15*
2.3 Fluid Dynamics *18*
2.3.1 Extra Column Effects *18*
2.3.2 Column Fluid Distribution *19*
2.3.3 Packing Nonidealities *19*
2.3.4 Sources for Nonideal Fluid Distribution *20*
2.3.5 Column Pressure Drop *21*
2.4 Mass Transfer Phenomena *22*
2.4.1 Principles of Mass Transfer *22*
2.4.2 Efficiency of Chromatographic Separations *24*
2.4.3 Resolution *27*
2.5 Equilibrium Thermodynamics *30*

2.5.1 Definition of Isotherms *30*
2.5.2 Models of Isotherms *32*
2.5.2.1 Single-Component Isotherms *32*
2.5.2.2 Multicomponent Isotherms Based on the Langmuir Model *34*
2.5.2.3 Competitive Isotherms Based on the Ideal Adsorbed Solution Theory *35*
2.5.2.4 Steric Mass Action Isotherms for Ion Exchange Equilibria *38*
2.6 Thermodynamic Effects on Mass Separation *40*
2.6.1 Mass Load *40*
2.6.2 Linear and Nonlinear Isotherms *41*
2.6.3 Elution Modes *43*
References *45*

3 Stationary Phases and Chromatographic Systems *47*
Michael Schulte, Matthias Jöhnck, Romas Skudas, Klaus K. Unger, Cedric du Fresne von Hohenesche, Wolfgang Wewers, Jules Dingenen, and Joachim Kinkel
3.1 Column Packings *47*
3.1.1 Survey of Packings and Stationary Phases *47*
3.1.2 Generic, Designed, and Customized Adsorbents *48*
3.1.2.1 Generic Adsorbents *48*
3.1.2.2 Designed Adsorbents *54*
3.1.2.3 Customized Adsorbents *62*
3.1.3 Reversed Phase Silicas *66*
3.1.3.1 Silanisation of the Silica Surface *67*
3.1.3.2 Chromatographic Characterization of Reversed Phase Silicas *69*
3.1.4 Cross-Linked Organic Polymers *72*
3.1.4.1 General Aspects *73*
3.1.4.2 Hydrophobic Polymer Stationary Phases *76*
3.1.4.3 Hydrophilic Polymer Stationary Phases *76*
3.1.4.4 Ion Exchange (IEX) *77*
3.1.4.5 Mixed Mode *85*
3.1.5 Chiral Stationary Phases *85*
3.1.5.1 Antibiotic CSP *91*
3.1.5.2 Synthetic Polymers *91*
3.1.5.3 Targeted Selector Design *92*
3.1.5.4 Further Developments *93*
3.1.6 Properties of Packings and their Relevance to Chromatographic Performance *95*
3.1.6.1 Chemical and Physical Bulk Properties *95*
3.1.6.2 Mass Loadability *101*
3.1.6.3 Comparative Rating of Columns *102*
3.1.7 Sorbent Maintenance and Regeneration *103*
3.1.7.1 Cleaning in Place (CIP) *103*
3.1.7.2 Conditioning of Silica Surfaces *106*

3.1.7.3 Sanitization in Place (SIP) *108*
3.1.7.4 Column and Adsorbent Storage *108*
3.2 Selection of Chromatographic Systems *109*
3.2.1 Definition of the Task *114*
3.2.2 Mobile Phases for Liquid Chromatography *118*
3.2.2.1 Stability *118*
3.2.2.2 Safety Concerns *118*
3.2.2.3 Operating Conditions *121*
3.2.2.4 Aqueous Buffer Systems *123*
3.2.3 Adsorbent and Phase Systems *125*
3.2.3.1 Choice of Phase System Dependent on Solubility *127*
3.2.3.2 Improving Loadability for Poor Solubilities *128*
3.2.3.3 Dependency of Solubility on Sample Purity *130*
3.2.3.4 Generic Gradients for Fast Separations *131*
3.2.4 Criteria for Choosing NP Systems *132*
3.2.4.1 Pilot Technique Thin-layer Chromatography *134*
3.2.4.2 Retention in NP Systems *134*
3.2.4.3 Solvent Strength in Liquid–Solid Chromatography *136*
3.2.4.4 Selectivity in NP Systems *138*
3.2.4.5 Mobile-Phase Optimization by TLC Following the PRISMA Model *139*
3.2.4.6 Strategy for an Industrial Preparative Chromatography Laboratory *148*
3.2.5 Criteria for Choosing RP Systems *153*
3.2.5.1 Retention and Selectivity in RP Systems *155*
3.2.5.2 Gradient Elution for Small amounts of Product on RP Columns *156*
3.2.5.3 Rigorous Optimization for Isocratic Runs *157*
3.2.5.4 Rigorous Optimization for Gradient Runs *161*
3.2.5.5 Practical Recommendations *164*
3.2.6 Criteria for Choosing CSP Systems *167*
3.2.6.1 Suitability of Preparative CSP *168*
3.2.6.2 Development of Enantioselectivity *169*
3.2.6.3 Optimization of Separation Conditions *171*
3.2.6.4 Practical Recommendations *172*
3.2.7 Downstream Processing of Mabs using Protein A and IEX *174*
3.2.8 Size Exclusion (SEC) *179*
3.2.9 Overall Chromatographic System Optimization *181*
3.2.9.1 Conflicts During Optimization of Chromatographic Systems *181*
3.2.9.2 Stationary Phase Gradients *184*
References *189*

4 Chromatography Equipment: Engineering and Operation *199*
Abdelaziz Toumi, Jules Dingenen, Joel Genolet, Olivier Ludemann-Hombourger, Andre Kiesewetter, Martin Krahe, Michele Morelli, Henner Schmidt-Traub, Andreas Stein, and Eric Valery
4.1 Introduction *199*
4.2 Engineering and Operational Challenges *201*

4.3 Chromatography Columns Market *207*
4.3.1 Generalities – The Suppliers *207*
4.3.2 General Design *208*
4.3.3 High- and Low-Pressure Columns *210*
4.3.3.1 Chemical Compatibility *211*
4.3.3.2 Frits Design *211*
4.3.3.3 Special Aspects of Bioseparation *215*
4.4 Chromatography Systems Market *217*
4.4.1 Generalities – The Suppliers *217*
4.4.2 General Design Aspects – High Performance and Low-Pressure Systems *217*
4.4.3 Material *219*
4.4.4 Batch Low-Pressure Liquid Chromatography (LPLC) Systems *220*
4.4.4.1 Inlets *220*
4.4.4.2 Valves to Control Flow Direction *220*
4.4.4.3 Pumps *221*
4.4.4.4 Pump(s) Valves and Gradient Formation *222*
4.4.5 Batch High-Pressure Liquid Chromatography (HPLC) Systems *224*
4.4.5.1 General Layout *224*
4.4.5.2 Inlets and Outlets *224*
4.4.5.3 Pumps *226*
4.4.5.4 Valves and Pipes *227*
4.4.6 Batch SFC Systems *228*
4.4.6.1 General Layout *228*
4.4.6.2 Inlets *230*
4.4.6.3 Pumps, Valves, and Pipes *231*
4.4.7 Continuous Systems – Simulated Moving Bed *231*
4.4.7.1 General Layout *231*
4.4.7.2 A Key Choice: The Recycling Strategy *232*
4.4.7.3 Pumps, Inlets, and Outlets *233*
4.4.7.4 Valves and Piping *233*
4.4.8 Auxiliary Systems *233*
4.4.8.1 Slurry Preparation Tank *234*
4.4.8.2 Slurry Pumps and Packing Stations *234*
4.4.8.3 Cranes and Transport Units *235*
4.4.8.4 Filter Integrity Test *235*
4.5 Process Control *236*
4.5.1 Standard Process Control *236*
4.5.2 Advanced Process Control *237*
4.5.3 Detectors *240*
4.6 Packing Methods *243*
4.6.1 Column and Packing Methodology Selection *243*
4.6.2 Slurry Preparation *244*
4.6.3 Column Preparation *246*
4.6.4 Flow Packing *246*

4.6.5 Dynamic Axial Compression (DAC) Packing *249*
4.6.6 Stall Packing *250*
4.6.7 Combined Method (Stall + DAC) *250*
4.6.8 Vacuum Packing *252*
4.6.9 Vibration Packing *253*
4.6.10 Column Equilibration *254*
4.6.11 Column Testing and Storage *254*
4.6.11.1 Test Systems *254*
4.6.11.2 Hydrodynamic Properties and Column Efficiency *256*
4.6.11.3 Column and Adsorbent Storage *257*
4.7 Process Troubleshooting *257*
4.7.1 Technical Failures *258*
4.7.2 Loss of Performance *259*
4.7.2.1 Pressure Increase *259*
4.7.2.2 Loss of Column Efficiency *262*
4.7.2.3 Variation of Elution Profile *263*
4.7.2.4 Loss of Purity/Yield *264*
4.7.3 Column Stability *265*
4.8 Disposable Technology for Bioseparations *265*
4.8.1 Market Trend *265*
4.8.2 Prepacked Columns *266*
4.8.3 Membrane Chromatography *267*
4.8.4 Membrane Technology *269*
References *270*

5 Process Concepts *273*
Malte Kaspereit, Michael Schulte, Klaus Wekenborg, and Wolfgang Wewers
5.1 Discontinuous Processes *273*
5.1.1 Isocratic Operation *273*
5.1.2 Flip-Flop Chromatography *275*
5.1.3 Closed-Loop Recycling Chromatography *276*
5.1.4 Steady-State Recycling Chromatography *278*
5.1.5 Gradient Chromatography *279*
5.1.6 Chromatographic Batch Reactors *281*
5.2 Continuous Processes *283*
5.2.1 Column Switching Chromatography *283*
5.2.2 Annular Chromatography *283*
5.2.3 Multiport Switching Valve Chromatography (ISEP/CSEP) *284*
5.2.4 Isocratic Simulated Moving Bed (SMB) Chromatography *286*
5.2.5 SMB Chromatography with Variable Process Conditions *290*
5.2.5.1 VariCol *290*
5.2.5.2 PowerFeed *291*
5.2.5.3 Partial-Feed, Partial-Discard, and Fractionation-Feedback Concepts *292*
5.2.5.4 Improved/Intermittent SMB (iSMB) *293*

5.2.5.5 ModiCon *294*
5.2.5.6 FF-SMB *294*
5.2.6 SMB Chromatography with Variable Solvent Conditions *294*
5.2.6.1 Gradient SMB Chromatography *295*
5.2.6.2 Supercritical Fluid SMB Chromatography *296*
5.2.7 Multicomponent Separations *296*
5.2.8 Multicolumn Systems for Bioseparations *298*
5.2.8.1 Sequential Multicolumn Chromatography (SMCC) *298*
5.2.8.2 Multicolumn Countercurrent Solvent Gradient Purification (MCSGP) *299*
5.2.9 Countercurrent Chromatographic Reactors *301*
5.2.9.1 SMB Reactor *301*
5.2.9.2 Processes with Distributed Functionalities *302*
5.3 Choice of Process Concepts *304*
5.3.1 Scale *305*
5.3.2 Range of k' *306*
5.3.3 Number of Fractions *306*
5.3.4 Example 1: Lab Scale; Two Fractions *306*
5.3.5 Example 2: Lab Scale; Three or More Fractions *308*
5.3.6 Example 3: Production Scale – Wide Range of k' *309*
5.3.7 Example 4: Production Scale; Two Main Fractions *310*
5.3.8 Example 5: Production Scale; Three Fractions *311*
5.3.9 Example 6: Production Scale; Multi-Stage Process *312*
References *315*

6 Modeling and Model Parameters *321*
Andreas Seidel-Morgenstern, Henner Schmidt-Traub, Mirko Michel, Achim Epping, and Andreas Jupke
6.1 Introduction *321*
6.2 Models for Single Chromatographic Columns *322*
6.2.1 Classes of Chromatographic Models *322*
6.2.2 Derivation of the Mass Balance Equations *324*
6.2.2.1 Mass Balance Equations *325*
6.2.2.2 Convective Transport *327*
6.2.2.3 Axial Dispersion *327*
6.2.2.4 Intraparticle Diffusion *327*
6.2.2.5 Mass Transfer *328*
6.2.2.6 Adsorption Kinetics *329*
6.2.2.7 Adsorption Equilibrium *329*
6.2.3 Equilibrium ("Ideal") Model *330*
6.2.4 Models with One Band Broadening Effect *334*
6.2.4.1 Dispersive Model *334*
6.2.4.2 Transport Model *336*
6.2.4.3 Reaction Model *337*
6.2.5 Lumped Rate Models *338*

6.2.5.1 Transport-Dispersive Model *338*
6.2.5.2 Reaction-Dispersive Model *339*
6.2.6 General Rate Models *340*
6.2.7 Initial and Boundary Conditions of the Column *343*
6.2.8 Models of Chromatographic Reactors *344*
6.2.9 Stage Models *344*
6.2.10 Assessment of Different Model Approaches *346*
6.2.11 Dimensionless Model Equations *348*
6.3 Modeling HPLC Plants *350*
6.3.1 Experimental Setup and Simulation Flow Sheet *350*
6.3.2 Modeling Extra Column Equipment *351*
6.3.2.1 Injection System *351*
6.3.2.2 Piping *352*
6.3.2.3 Detector *352*
6.4 Calculation Methods *353*
6.4.1 Analytical Solutions *353*
6.4.2 Numerical Solution Methods *353*
6.4.2.1 General Solution Procedure *353*
6.4.2.2 Discretization *354*
6.5 Parameter Determination *357*
6.5.1 Parameter Classes for Chromatographic Separations *357*
6.5.1.1 Design Parameters *357*
6.5.1.2 Operating Parameters *358*
6.5.1.3 Model Parameters *358*
6.5.2 Determination of Model Parameters *359*
6.5.3 Evaluation of Chromatograms *361*
6.5.3.1 Moment Analysis and HETP Plots *362*
6.5.3.2 Parameter Estimation *369*
6.5.3.3 Peak Fitting Functions *370*
6.5.4 Detector Calibration *374*
6.5.5 Plant Parameters *375*
6.5.6 Determination of Packing Parameters *376*
6.5.6.1 Void Fraction and Porosity of the Packing *376*
6.5.6.2 Axial Dispersion *377*
6.5.6.3 Pressure Drop *378*
6.5.7 Isotherms *379*
6.5.7.1 Determination of Adsorption Isotherms *379*
6.5.7.2 Determination of the Henry Coefficient *382*
6.5.7.3 Static Isotherm Determination Methods *382*
6.5.7.4 Dynamic Methods *385*
6.5.7.5 Frontal Analysis *385*
6.5.7.6 Analysis of Disperse Fronts (ECP/FACP) *390*
6.5.7.7 Peak Maximum Method *391*
6.5.7.8 Minor Disturbance/Perturbation Method *392*
6.5.7.9 Curve Fitting of the Chromatogram *394*

6.5.7.10 Prediction of Mixture Behavior from Single-Component Data *395*
6.5.7.11 Data Analysis and Accuracy *396*
6.5.8 Mass Transfer *398*
6.5.9 Identification of Isotherms and Mass Transfer Resistance by Neural Networks *399*
6.6 Experimental Validation of Column Models *401*
6.6.1 Batch Chromatography *401*
6.6.2 SMB Chromatography *404*
6.6.2.1 Model Formulation and Parameters *404*
6.6.2.2 Experimental Validation of SMB Models *410*
References *418*

7 Model-Based Design, Optimization, and Control *425*
Henner Schmidt-Traub, Malte Kaspereit, Sebastian Engell, Arthur Susanto, Achim Epping, and Andreas Jupke
7.1 Basic Principles and Definitions *425*
7.1.1 Performance, Costs, and Optimization *425*
7.1.1.1 Performance Criteria *426*
7.1.1.2 Economic Criteria *428*
7.1.1.3 Objective Functions *429*
7.1.2 Degrees of Freedom *430*
7.1.2.1 Optimization Parameters *430*
7.1.2.2 Dimensionless Operating and Design Parameters *430*
7.1.3 Scaling by Dimensionless Parameters *435*
7.1.3.1 Influence of Different HETP Coefficients for Every Component *436*
7.1.3.2 Influence of Feed Concentration *437*
7.1.3.3 Examples for a Single Batch Chromatographic Column *438*
7.1.3.4 Examples for SMB Processes *440*
7.2 Batch Chromatography *442*
7.2.1 Fractionation Mode (Cut Strategy) *442*
7.2.2 Design and Optimization of Batch Chromatographic Columns *444*
7.2.2.1 Design and Optimization Strategy *444*
7.2.2.2 Process Performance Depending on Number of Stages and Loading Factor *447*
7.2.2.3 Other Strategies *452*
7.3 Recycling Chromatography *453*
7.3.1 Design of Steady-State Recycling Chromatography *454*
7.3.2 Scale-Up of Closed Loop Recycling Chromatography *457*
7.4 Conventional Isocratic SMB Chromatography *461*
7.4.1 Optimization of Operating Parameters *462*
7.4.1.1 Process Design Based on TMB Models (Shortcut Methods) *463*
7.4.1.2 Process Design Based on Rigorous SMB Models *471*
7.4.2 Optimization of Design Parameters *476*

7.5 Isocratic SMB Chromatography under Variable Operating Conditions *481*
7.6 Gradient SMB Chromatography *490*
7.7 Multicolumn Systems for Bioseparations *495*
7.8 Advanced Process Control *497*
7.8.1 Online Optimization of Batch Chromatography *498*
7.8.2 Advanced Control of SMB Chromatography *501*
7.8.2.1 Purity Control for SMB Processes *502*
7.8.2.2 Direct Optimizing Control of SMB Processes *503*
7.8.3 Advanced Parameter and State Estimation for SMB Processes *509*
References *510*

Appendix A: Data of Test Systems *519*

Index *527*
