Preface *XIII*

List of Acronyms *XVII*

1	Introduction to Catalysis	<i>1</i>
1.1	What Is Catalysis?	<i>2</i>
1.2	Catalysts Can Be Atoms, Molecules, Enzymes, and Solid Surfaces	<i>4</i>
1.2.1	Homogeneous Catalysis	<i>5</i>
1.2.2	Biocatalysis	<i>5</i>
1.2.3	Heterogeneous Catalysis	<i>6</i>
1.3	Why Is Catalysis Important?	<i>9</i>
1.3.1	Catalysis and Green Chemistry	<i>9</i>
1.3.2	Atom Efficiency, E Factors, and Environmental Friendliness	<i>10</i>
1.3.3	The Chemical Industry	<i>11</i>
1.4	Catalysis as a Multidisciplinary Science	<i>16</i>
1.4.1	The Many Length Scales of a “Catalyst”	<i>16</i>
1.4.2	Time Scales in Catalysis	<i>17</i>
1.5	The Scope of this Book	<i>18</i>
1.6	Appendix: Catalysis in Journals	<i>18</i>
	References	<i>22</i>
2	Kinetics	<i>23</i>
2.1	Introduction	<i>23</i>
2.2	The Rate Equation and Power Rate Laws	<i>25</i>
2.3	Reactions and Thermodynamic Equilibrium	<i>28</i>
2.3.1	Example of Chemical Equilibrium: The Ammonia Synthesis	<i>31</i>
2.3.2	Chemical Equilibrium for a Nonideal Gas	<i>33</i>
2.4	The Temperature Dependence of the Rate	<i>35</i>
2.5	Integrated Rate Equations: Time Dependence of Concentrations in Reactions of Different Orders	<i>38</i>
2.6	Coupled Reactions in Flow Reactors: The Steady State Approximation	<i>41</i>
2.7	Coupled Reactions in Batch Reactors	<i>45</i>

2.8	Catalytic Reactions	48
2.8.1	The Mean-Field Approximation	52
2.9	Langmuir Adsorption Isotherms	53
2.9.1	Associative Adsorption	53
2.9.2	Dissociative Adsorption	54
2.9.3	Competitive Adsorption	55
2.10	Reaction Mechanisms	55
2.10.1	Langmuir–Hinshelwood or Eley–Rideal Mechanisms	56
2.10.2	Langmuir–Hinshelwood Kinetics	56
2.10.3	The Complete Solution	57
2.10.4	The Steady State Approximation	58
2.10.5	The Quasi-Equilibrium Approximation	59
2.10.6	Steps with Similar Rates	60
2.10.7	Irreversible Step Approximation	61
2.10.8	The MARI Approximation	61
2.10.9	The Nearly Empty Surface	62
2.10.10	The Reaction Order	63
2.10.11	The Apparent Activation Energy	63
2.11	Entropy, Entropy Production, Auto Catalysis, and Oscillating Reactions	67
2.12	Kinetics of Enzyme-Catalyzed Reactions	73
	References	77
3	Reaction Rate Theory	79
3.1	Introduction	79
3.2	The Boltzmann Distribution and the Partition Function	80
3.3	Partition Functions of Atoms and Molecules	83
3.3.1	The Boltzmann Distribution	83
3.3.2	Maxwell–Boltzmann Distribution of Velocities	86
3.3.3	Total Partition Function of a System	87
3.4	Molecules in Equilibrium	93
3.5	Collision Theory	100
3.5.1	Reaction Probability	104
3.5.2	Fundamental Objection against Collision Theory	105
3.6	Activation of Reacting Molecules by Collisions: The Lindemann Theory	106
3.7	Transition State Theory	107
3.8	Transition State Theory of Surface Reactions	113
3.8.1	Adsorption of Atoms	113
3.8.2	Adsorption of Molecules	118
3.8.3	Reaction between Adsorbates	121
3.8.4	Desorption of Molecules	123
3.9	Summary	124
	References	127

4	Catalyst Characterization	<i>129</i>
4.1	Introduction	<i>129</i>
4.2	X-ray Diffraction (XRD)	<i>131</i>
4.3	X-ray Photoelectron Spectroscopy (XPS)	<i>134</i>
4.4	X-ray Absorption Spectroscopy (EXAFS and XANES)	<i>139</i>
4.4.1	Extended X-ray Absorption Fine Structure (EXAFS)	<i>139</i>
4.4.2	X-ray Absorption Near-Edge Spectroscopy (XANES)	<i>143</i>
4.5	Electron Microscopy	<i>144</i>
4.6	Mössbauer Spectroscopy	<i>148</i>
4.7	Ion Spectroscopy: SIMS, LEIS, RBS	<i>151</i>
4.8	Temperature-Programmed Reduction, Oxidation, and Sulfidation	<i>155</i>
4.9	Infrared Spectroscopy	<i>158</i>
4.10	Surface Science Techniques	<i>160</i>
4.10.1	Low Electron Energy Diffraction (LEED)	<i>161</i>
4.10.2	Scanning Probe Microscopy	<i>164</i>
4.11	Concluding Remarks	<i>169</i>
	References	<i>170</i>
5	Solid Catalysts	<i>173</i>
5.1	Requirements of a Successful Catalyst	<i>173</i>
5.2	The Structure of Metals, Oxides, and Sulfides and Their Surfaces	<i>175</i>
5.2.1	Metal Structures	<i>175</i>
5.2.2	Surface Crystallography of Metals	<i>176</i>
5.2.3	Oxides and Sulfides	<i>182</i>
5.2.4	Surface Free Energy	<i>185</i>
5.3	Characteristics of Small Particles and Porous Material	<i>187</i>
5.3.1	The Wulff Construction	<i>187</i>
5.3.2	The Pore System	<i>190</i>
5.3.3	The Surface Area	<i>191</i>
5.4	Catalyst Supports	<i>197</i>
5.4.1	Silica	<i>197</i>
5.4.2	Alumina	<i>199</i>
5.4.3	Carbon	<i>201</i>
5.4.4	Shaping of Catalyst Supports	<i>201</i>
5.5	Preparation of Supported Catalysts	<i>203</i>
5.5.1	Coprecipitation	<i>203</i>
5.5.2	Impregnation, Adsorption, and Ion Exchange	<i>203</i>
5.5.3	Deposition Precipitation	<i>205</i>
5.6	Unsupported Catalysts	<i>206</i>
5.7	Zeolites	<i>206</i>
5.7.1	Structure of a Zeolite	<i>207</i>
5.7.2	Compensating Cations and Acidity	<i>208</i>
5.7.3	Applications of Zeolites	<i>209</i>
5.8	Catalyst Testing	<i>210</i>

5.8.1	Ten Commandments for Testing Catalysts	211
5.8.2	Activity Measurements	213
	References	223
6	Surface Reactivity	225
6.1	Introduction	225
6.2	Physisorption	226
6.2.1	The Van der Waals Interaction	226
6.2.2	Including the Repulsive Part	227
6.3	Chemical Bonding	228
6.3.1	Bonding in Molecules	229
6.3.2	The Solid Surface	233
6.4	Chemisorption	246
6.4.1	The Newns–Anderson Model	246
6.4.2	Summary of the Newns–Anderson Approximation in Qualitative Terms	252
6.4.3	Electrostatic Effects in Atomic Adsorbates on Jellium	254
6.5	Important Trends in Surface Reactivity	256
6.5.1	Trend in Atomic Chemisorption Energies	257
6.5.2	Trends in Molecular Chemisorption	261
6.5.3	Trends in Surface Reactivity	265
6.5.4	Universality in Heterogeneous Catalysis	274
6.5.5	Scaling Relations	276
6.5.6	Appendix: Density Functional Theory (DFT)	278
	References	280
7	Kinetics of Reactions on Surfaces	283
7.1	Elementary Surface Reactions	283
7.1.1	Adsorption and Sticking	283
7.1.2	Desorption	289
7.1.3	Lateral Interactions in Surface Reactions	295
7.1.4	Dissociation Reactions on Surfaces	297
7.1.5	Intermediates in Surface Reactions	301
7.1.6	Association Reactions	301
7.2	Kinetic Parameters from Fitting Langmuir–Hinshelwood Models	304
7.3	Microkinetic Modeling	306
7.3.1	Reaction Scheme and Rate Expressions	307
7.3.2	Activation Energy and Reaction Orders	310
7.3.3	Ammonia Synthesis Catalyst under Working Conditions	313
	References	315
8	Catalysis in Practice: Synthesis Gas and Hydrogen	319
8.1	Introduction	319
8.2	Synthesis Gas and Hydrogen	319
8.2.1	Steam Reforming: Basic Concepts of the Process	321

8.2.2	Mechanistic Detail of Steam Reforming	323
8.2.3	Challenges in the Steam Reforming Process	326
8.2.4	The SPARG Process: Selective Poisoning by Sulfur	328
8.2.5	Gold–Nickel Alloy Catalyst for Steam Reforming	329
8.2.6	Direct Uses of Methane	330
8.3	Reaction of Synthesis Gas	332
8.3.1	Methanol Synthesis	332
8.3.2	Fischer–Tropsch Process	343
8.4	Water–Gas Shift Reaction	351
8.5	Synthesis of Ammonia	353
8.5.1	History of Ammonia Synthesis	353
8.5.2	Ammonia Synthesis Plant	355
8.5.3	Operating the Reactor	356
8.5.4	Scientific Rationale for Improving Catalysts	359
8.6	Promoters and Inhibitors	361
8.7	The “Hydrogen Society”	364
8.7.1	The Need for Sustainable Energy	364
8.7.2	Sustainable Energy Sources	366
8.7.3	Energy Storage	368
8.7.4	Hydrogen Fuel Cells	377
	References	385
9	Oil Refining and Petrochemistry	391
9.1	Crude Oil	391
9.2	Hydrotreating	394
9.2.1	Heteroatoms and Undesired Compounds	395
9.2.2	Hydrotreating Catalysts	397
9.2.3	Hydrodesulfurization Reaction Mechanisms	399
9.3	Gasoline Production	402
9.3.1	Fluidized Catalytic Cracking	404
9.3.2	Reforming and Bifunctional Catalysis	406
9.3.3	Alkylation	410
9.4	Petrochemistry: Reactions of Small Olefins	412
9.4.1	Ethylene Epoxidation	412
9.4.2	Partial Oxidation and Ammoxidation of Propylene	413
9.4.3	Polymerization Catalysis	415
	References	418
10	Environmental Catalysis	421
10.1	Introduction	421
10.2	Air Pollution by Automotive Exhaust	422
10.2.1	The Three-Way Catalyst	423
10.2.2	Catalytic Reactions in the Three-Way Catalyst: Mechanism and Kinetics	429
10.2.3	Concluding Remarks on Automotive Catalysts	436

10.3	Air Pollution by Large Stationary Sources	437
10.3.1	Selective Catalytic Reduction: The SCR Process	437
10.3.2	The SCR Process for Mobile Units	443
	References	444

Appendix 447

Questions and Exercises 449
