Preface VII

Acknowledgement IX

1	General Methods to Direct Selectivity	1
1.1	Chemoselectivity	1
1.2	Regioselectivity	7
1.3	Stereoselectivity	26
1.4	Enantioselectivity	48
	References	60
2	Directed Selectivity: Acetylenes and Alkenes	65
2.1	Acetylenes	65
2.2	Alkenes	74
2.2.1	Hydrogenation and Reduction	74
2.2.2	Hydroformylation	81
2.2.3	Oxidation and Allyl Oxidation	84
2.2.4	Allyl Substitution	89
2.2.5	Cycloaddition	110
2.2.6	Sigmatropic Rearrangement	120
2.2.7	Ene Reaction	125
2.2.8	Heck Cyclization	128
2.2.9	Pauson-Khand Reaction	130
2.2.10	Metathesis Cyclization	131
2.2.11	Radical- and Nucleophilic Cyclization	133
	References	135
3	Directed Selectivity with Carbonyl Derivatives	141
3.1	Carbonyl Compounds as Electrophiles	141
3.1.1	1,2-Addition of Nucleophiles to Carbonyls	141
3.1.2	Reduction of Carbonyl Compounds	151
3.1.3	Allylation/Crotylation Reactions	163
3.2	Conjugate Addition to Carbonyl Compounds	178

3.2.1	Cuprate Additions	178
3.2.2	Enolate Additions	181
3.2.3	Free Radical Addition to Enoates	182
3.2.4	Olefin Formation by Organometal Addition to Alkynes	184
3.3	Enolate Derivatives	185
3.4	Miscellaneous	194
3.4.1	Rearrangements and Fragmentations	194
3.4.2	Pericyclic Reactions	198
3.4.3	Lewis Acid-Mediated Carbonyl ene Reactions	200
3.4.4	Organometal-Mediated C–C Connections	201
3.4.5	Metal Complex Formation in Carbonyl and Imine Additions	202
3.4.6	Wittig-Type Reactions	205
3.4.7	Oxidation Reactions	207
	References	208
4	Selectivity at sp^3-Centers and Heteroatoms	217
4.1	Epoxides	217
4.2	Acetals	249
4.3	Ethers	266
4.4	Alcohols and Phenols	285
4.5	Sulfur Compounds	303
4.6	Amines	318
4.7	Halogen Compounds	334
	References	345
	Index	355
