Preface *xvii*

Acknowledgments *xix*

1	Introduction	<i>1</i>
1.1	Wave-Particle Duality	<i>2</i>
1.2	Uncertainty Principle	<i>3</i>
1.3	Schrödinger Equation	<i>3</i>
1.4	Particle in a Potential Box	<i>4</i>
1.5	Fermi-Dirac Distribution and Fermi Energy	<i>5</i>
1.6	Density of States	<i>7</i>
1.7	Quantum Confinement	<i>8</i>
1.8	Top-Down and Bottom-Up Approaches to Construct Nanostructures	<i>10</i>
1.9	Nanostructured Materials Based on Dimension	<i>11</i>
1.10	Zero-Dimensional Nanostructures	<i>11</i>
1.11	One-Dimensional Nanostructures	<i>13</i>
1.12	Two-Dimensional Nanostructures	<i>14</i>
1.13	Three-Dimensional Nanostructures: Superstructures and Hybrid Structures	<i>15</i>
	References	<i>16</i>
2	Synthesis, Characterization, and Applications of Zero-Dimensional (0D) Nanostructures	<i>21</i>
2.1	General Remarks	<i>21</i>
2.2	Synthesis, Characterization, and Bioapplication of Metal Ag Nanoparticles	<i>21</i>
2.2.1	Synthesis of GSH-Coated Ag NPs	<i>22</i>
2.2.2	Ag NPs Modification	<i>22</i>
2.2.2.1	Ag NPs and BSA Binding	<i>22</i>
2.2.2.2	SDS-PAGE of Ag NPs and BSA Binding	<i>22</i>
2.2.3	Cell Culture and Treatment	<i>23</i>
2.2.4	MTT (Thiazolyl Blue) Assay	<i>23</i>
2.2.5	Fluorescence Observation of K562 Cells Stained by Hoechst 33258	<i>23</i>

2.2.6	Flow Cytometer Measurement	23
2.2.7	Characterization	24
2.2.8	Structure	24
2.2.8.1	Microstructure of Ag NPs	24
2.2.8.2	Binding of Ag NPs and BSA	25
2.2.9	Anticancer Activities of Ag NPs	29
2.3	Synthesis, Characterization, and Optical Properties of Oxide Nanoparticles	33
2.3.1	SnO ₂ Nanoparticles	33
2.3.1.1	Synthesis	35
2.3.1.2	Characterization	35
2.3.1.3	Photocatalytic Activity Test	35
2.3.1.4	Structure	35
2.3.2	ZrO ₂ Nanoparticles	45
2.3.2.1	Synthesis	45
2.3.2.2	Characterization	45
2.3.2.3	Photocatalytic Activity Test	46
2.3.2.4	Structure	46
2.3.2.5	Optical Properties of ZrO ₂ Nanoparticles	49
2.3.2.6	Photocatalytic Properties	51
2.3.3	In ₂ O ₃ Hollow Nanocrystals	52
2.3.3.1	Synthesis	52
2.3.3.2	Characterization	53
2.3.3.3	Photocatalytic Activity Test	53
2.3.3.4	Structure	53
2.3.3.5	Growth Mechanism of the rh-In ₂ O ₃ Hollow Nanocrystals	58
2.3.3.6	Photocatalytic Activity of the rh-In ₂ O ₃ Hollow Nanocrystals	61
2.3.4	Fe ₂ O ₃ Nanoparticles	68
2.3.4.1	Synthesis	69
2.3.4.2	Characterization	69
2.3.4.3	Measurement of Magnetic Properties	69
2.3.4.4	Structure	71
2.3.4.5	Magnetic Properties	73
2.4	Synthesis, Characterization, and Optical Properties of Sulfide Nanoparticles	74
2.4.1	CdS Nanoparticles	74
2.4.1.1	Synthesis	76
2.4.1.2	Characterization	76
2.4.1.3	Structure	76
2.4.1.4	Growth Mechanism	80
2.4.1.5	Photoluminescence Properties	82
2.4.2	ZnS Nanoparticles and Microspheres	83
2.4.2.1	Synthesis of ZnS Nanoparticles and Microspheres	84
2.4.2.2	Characterization	84
2.4.2.3	Structure	84
2.4.2.4	Optical Properties	90
2.4.3	Ag ₂ S Nanospheres	92

2.4.3.1	Synthesis	92
2.4.3.2	Characterization	93
2.4.3.3	Structure	93
2.4.3.4	Optical Properties of Ag ₂ S Nanospheres	95
2.4.3.5	Growth Mechanism	96
2.5	Synthesis, Characterization, and Magnetic Properties of Oxide Nanocubes	101
2.5.1	Fe ₂ O ₃ Nanocubes	101
2.5.1.1	Synthesis	101
2.5.1.2	Characterization	103
2.5.1.3	Structure	104
2.5.1.4	Magnetic Properties	106
2.5.2	Fe ₃ O ₄ Nanocubes	106
2.5.2.1	Synthesis	107
2.5.2.2	Characterization	107
2.5.2.3	Magnetic Behavior Measurement	107
2.5.2.4	Electrochemical Measurement	107
2.5.2.5	Structure	108
2.5.2.6	Growth Mechanism	110
2.5.2.7	Magnetic Properties	115
2.5.2.8	Applied as Anode for LIBs	117
2.6	Synthesis, Characterization, and Photocatalytic Application of Microspheres (Bi@Bi ₂ O ₃ Microspheres)	119
2.6.1	Synthesis	120
2.6.2	Characterization	121
2.6.3	Photocatalytic Test	121
2.6.4	Structure	122
2.6.5	Growth Mechanism	124
2.6.6	Optical Properties	126
2.6.7	Photocatalytic Activities	127
	References	133
3	Synthesis, Characterization, and Application of One-Dimensional (1D) Nanostructures	147
3.1	General Remarks	147
3.2	Synthesis, Characterization, and Magnetic/Electrical Properties of Metal Nanowires/Nanotubes	147
3.2.1	Fe Nanowire Arrays	147
3.2.1.1	Synthesis	148
3.2.1.2	Characterization	148
3.2.1.3	Structure	149
3.2.1.4	Magnetic Properties	150
3.2.2	Co Nanowire Arrays	150
3.2.2.1	Synthesis	151
3.2.2.2	Characterization	152
3.2.2.3	Structure	152
3.2.2.4	Magnetic Properties	152

3.2.3	Ni Nanowire Arrays	154
3.2.3.1	Synthesis	154
3.2.3.2	Characterization	155
3.2.3.3	Structure	155
3.2.3.4	Magnetic Properties	156
3.2.4	Cu Nanowire Arrays	156
3.2.4.1	Synthesis	156
3.2.4.2	Characterization	157
3.2.4.3	Structure	157
3.2.4.4	Electrical Properties	159
3.2.5	Growth Mechanism for 1D Metal Nanostructures	160
3.2.5.1	Synthesis	161
3.2.5.2	Characterization	161
3.2.5.3	Structure	161
3.2.5.4	Growth Mechanism	164
3.3	Synthesis, Characterization, and Optical Properties of Metal Oxide Nanowires	167
3.3.1	In ₂ O ₃ Nanowires	167
3.3.1.1	Synthesis	168
3.3.1.2	Characterization	168
3.3.1.3	Structure	168
3.3.1.4	Photoluminescence Properties	169
3.3.2	ZrO ₂ Nanowires	170
3.3.2.1	Synthesis	171
3.3.2.2	Characterization	171
3.3.2.3	Optical Properties	173
3.3.3	SnO ₂ Nanowires	175
3.3.3.1	Synthesis	175
3.3.3.2	Characterization	176
3.3.3.3	Optical Properties	177
3.3.4	NiO Nanowires	179
3.3.4.1	Synthesis	179
3.3.4.2	Characterization	179
3.3.4.3	Structures	179
3.3.4.4	Optical Properties	180
3.3.5	Cr ₂ O ₃ Nanowires	181
3.3.5.1	Synthesis	182
3.3.5.2	Characterization	182
3.3.5.3	Structures	182
3.3.5.4	Optical Properties	183
3.4	Synthesis, Characterization, Electrochemical Properties, and Supercapacitor Applications of MoO ₃ Nanowires	185
3.4.1	Synthesis	186
3.4.2	Characterization	186
3.4.3	Wastewater Treatment Experiment	187
3.4.4	Electrochemical Measurement	187
3.4.5	Structure	187

3.4.6	Electrochemical Properties and Supercapacitor Applications	190
3.4.7	Adsorption Properties for Removal of RhB	192
3.5	Synthesis, Characterization, and Bioapplication of Hydroxyapatite (HAP) Nanorods	193
3.5.1	Synthesis	194
3.5.2	Characterization	194
3.5.3	Cell Culture and Treatment	195
3.5.4	MTT (Thiazolyl Blue) Assay	195
3.5.5	Fluorescence Observation of HeLa Cells Stained by Hoechst 33342	195
3.5.6	Flow Cytometer Measurement	195
3.5.7	Nanoindentation Test	196
3.5.8	Structure	196
3.5.9	Anticancer Activity	201
3.5.10	Mechanical Strength	205
3.6	Synthesis and Characterization of Sulfide (CdS) Nanowire Arrays	206
3.6.1	Synthesis	206
3.6.2	Characterization	207
3.6.3	Structure	207
3.7	Synthesis and Characterization of Fullerene (C ₇₀) Nanowires	208
3.7.1	Synthesis	209
3.7.2	Characterization	209
	References	211
4	Synthesis, Characterization, and Applications of Two-Dimensional (2D) Graphene-Related Nanostructures	221
4.1	General Remarks	221
4.2	Synthesis, Characterization, and Applications of Graphene-Based Oxide Hybrid Nanostructures	221
4.2.1	Co ₃ O ₄ @Reduced Graphene Oxide	221
4.2.1.1	Synthesis	222
4.2.1.2	Characterization	223
4.2.1.3	Electrochemical Behavior Measurement	223
4.2.1.4	Structure	224
4.2.1.5	Electrochemical Properties	226
4.2.2	Fe ₃ O ₄ @Reduced Graphene Oxide	227
4.2.2.1	Synthesis	228
4.2.2.2	Characterization	228
4.2.2.3	Electrochemical Measurement	229
4.2.2.4	Structure	229
4.2.2.5	Magnetic Properties	233
4.2.2.6	Electrochemical Properties and Application as Anode for LIBs	235
4.2.3	SnO ₂ -Polyaniline-Reduced Graphene Oxide in LIBs	240
4.2.3.1	Synthesis	241
4.2.3.2	Characterization	242
4.2.3.3	Electrochemical Experiment	243

4.2.3.4	Structure	243
4.2.3.5	Electrochemical Properties and Applied as Anode for LIBs	246
4.2.4	TiO ₂ @Reduced Graphene Oxide	249
4.2.4.1	Synthesis	250
4.2.4.2	Characterization	250
4.2.4.3	Electrochemical Measurement	250
4.2.4.4	Structure	251
4.2.4.5	Electrochemical Properties and Applied as Electrodes for Supercapacitors	253
4.2.5	Cu ₂ O@Reduced Graphene Oxide	259
4.2.5.1	Synthesis	259
4.2.5.2	Characterization	259
4.2.5.3	Adsorption Measurement	260
4.2.5.4	Electrochemical Measurement	260
4.2.5.5	Structure	261
4.2.5.6	Removal of RhB	265
4.2.5.7	Electrochemical Properties and Applied as Electrodes for Supercapacitors	267
4.2.6	ZnO@Reduced Graphene Oxide	269
4.2.6.1	Synthesis	269
4.2.6.2	Characterization	270
4.2.6.3	Photocatalytic Property Measurement	270
4.2.6.4	Structure	271
4.2.6.5	Electrochemical Behavior	273
4.2.6.6	Photocatalytic Properties	273
4.2.7	Fe ₂ O ₃ @Reduced Graphene Oxide	276
4.2.7.1	Synthesis	276
4.2.7.2	Characterization	277
4.2.7.3	Structure	277
4.2.7.4	Magnetic Properties	281
4.2.7.5	Removal of Rhodamine B Dye Molecules from Water	283
4.3	Synthesis, Characterization, and Applications of Graphene-Related Hydroxide Nanocomposites	285
4.3.1	β-Ni(OH) ₂ @RGO	285
4.3.1.1	Synthesis	286
4.3.1.2	Characterization	286
4.3.1.3	Electrochemical Measurement	287
4.3.1.4	Nickel–MH Battery Performance Measurement	287
4.3.1.5	LIB Performance Measurement	287
4.3.1.6	Structure	288
4.3.1.7	Electrochemical Properties and Applied in Ni-MH and LIBs	290
4.3.2	Mg(OH) ₂ @RGO	294
4.3.2.1	Synthesis	294
4.3.2.2	Characterization	294
4.3.2.3	Adsorption of Dye from Water	294
4.3.2.4	Structure	295
4.3.2.5	Applications	298

- 4.4 Synthesis, Characterization, and Applications of Graphene-Related Sulfide ($\text{SnS}_2@\text{RGO}$) Nanocomposites 301
 - 4.4.1 Synthesis 301
 - 4.4.2 Characterization 302
 - 4.4.3 Electrochemical Measurement 302
 - 4.4.4 Structure 303
 - 4.4.5 Applied as Anode Material for LIBs 307
- 4.5 Synthesis, Characterization, and Applications of Graphene-Related Carbonate ($\text{MnCO}_3@\text{RGO}$) Nanocomposites 314
 - 4.5.1 Synthesis 314
 - 4.5.2 Characterization 315
 - 4.5.3 Structure 316
 - 4.5.4 Applications as Anode for LIBs 319
- 4.6 Synthesis, Characterization, and Applications of Graphene-Related Metal ($\text{Ni}@\text{RGO}$) Nanocomposites 324
 - 4.6.1 Synthesis 324
 - 4.6.2 Characterization 325
 - 4.6.3 Adsorption Measurement 325
 - 4.6.4 Electrochemical Measurement 326
 - 4.6.5 Structure 326
 - 4.6.6 Magnetic Properties 329
 - 4.6.7 Removal of MB 331
 - 4.6.8 Electrical Properties and Applied as Electrode for Supercapacitors 333
- 4.7 Synthesis, Characterization, and Applications of Graphene-Related Organic Nanocomposites (Adenine Modified Graphene, AMG) 334
 - 4.7.1 Synthesis 335
 - 4.7.2 Characterization 335
 - 4.7.3 Electrochemical Measurement 336
 - 4.7.4 Structure 336
 - 4.7.5 Electrical Properties 341
 - References 346
- 5 Synthesis, Characterization, and Applications of Three-Dimensional (3D) Nanostructures 363**
 - 5.1 General Remarks 363
 - 5.2 Synthesis, Characterization, and Application of 3D Oxide Nanostructures 363
 - 5.2.1 Boehmite Nanococoons 363
 - 5.2.1.1 Synthesis 364
 - 5.2.1.2 Characterization 364
 - 5.2.1.3 Structure 364
 - 5.2.1.4 Growth Mechanism 366
 - 5.2.1.5 CL Properties 367
 - 5.2.2 ZnO-CPP Nanostructures 368
 - 5.2.2.1 Synthesis 369
 - 5.2.2.2 Characterization 370

5.2.2.3	Photocatalysis Experiment	370
5.2.2.4	Water Contact Angle (CA) Measurement	370
5.2.2.5	Structure	370
5.2.2.6	Possible Growth Mechanism of Zn-CPPs	375
5.2.2.7	Formation of ZnO from Zn-CPPs	376
5.2.2.8	Superhydrophobicity	377
5.2.2.9	Photocatalysis Properties	378
5.2.3	Co ₃ O ₄ 3D Superstructures	379
5.2.3.1	Synthesis	379
5.2.3.2	Characterization	380
5.2.3.3	Magnetic Behavior Measurement	380
5.2.3.4	Catalytic Reaction	380
5.2.3.5	Structure	381
5.2.3.6	Optical Properties	381
5.2.3.7	Growth Mechanism	384
5.2.3.8	Magnetic Properties	386
5.2.3.9	Applied as Peroxidase	388
5.2.4	Mn ₂ O ₃ 3D Superstructures	395
5.2.4.1	Synthesis	396
5.2.4.2	Characterization	397
5.2.4.3	Water Contact Angle (CA) Measurement	397
5.2.4.4	Measurement of Magnetic Properties	397
5.2.4.5	Structure	397
5.2.4.6	Growth Mechanism	401
5.2.4.7	Magnetic Properties	404
5.2.4.8	Superhydrophobic Properties	407
5.2.5	WO ₃ 3D Snowflake-like Nanostructures	408
5.2.5.1	Synthesis	409
5.2.5.2	Characterization	409
5.2.5.3	Water Contact Angle Measurement	409
5.2.5.4	Photocatalytic Activity Test	409
5.2.5.5	Electrochemical Measurement	410
5.2.5.6	Growth Mechanism	410
5.2.5.7	Structure	417
5.2.5.8	Superhydrophobicity	420
5.2.5.9	Photocatalytic Activity	421
5.2.5.10	Improved Anode Performance for LIBs	425
5.3	Synthesis, Characterization, and Application of 3D Hydroxide Nanostructures	428
5.3.1	Ni(OH) ₂ 3D Peonylike Superstructures	428
5.3.1.1	Synthesis	428
5.3.1.2	Characterization	428
5.3.1.3	Electrochemical Properties Measurement	429
5.3.1.4	Wetting Behavior Measurement	429
5.3.1.5	Structure	429
5.3.1.6	Growth Mechanism	433
5.3.1.7	Electrochemical Properties	435

5.3.1.8	Superhydrophobic Properties	437
5.3.2	Mg(OH) ₂ 3D Nanoflowers	438
5.3.2.1	Synthesis	439
5.3.2.2	Characterization	439
5.3.2.3	Wetting Behavior Test	440
5.3.2.4	Fire Test	440
5.3.2.5	Mechanical Properties Test	440
5.3.2.6	Thermogravimetric Analysis (TGA)	440
5.3.2.7	Structure	440
5.3.2.8	Growth Mechanism	441
5.3.2.9	Hydrophobic Properties	445
5.3.2.10	Flammability	446
5.4	Synthesis, Characterization, and Application of 3D Sulfide (PbS) Nanostructures	450
5.4.1	Synthesis	451
5.4.2	Characterization	451
5.4.3	Structure	451
5.4.4	Growth Mechanism	458
5.5	Synthesis, Characterization, and Application of 3D Selenide Nanostructures	460
5.5.1	Ag ₂ Se 3D Plate-like Nanostructures	460
5.5.1.1	Synthesis	461
5.5.1.2	Characterization	461
5.5.1.3	Photocatalytic Activity Test	461
5.5.1.4	Wetting Behavior Test	462
5.5.1.5	Structure	462
5.5.1.6	Growth Mechanism	464
5.5.1.7	Optical Properties	465
5.5.1.8	Photocatalytic Properties	466
5.5.1.9	Superhydrophobic Properties	470
5.5.2	PbSe 3D Dendrite-like Nanostructures	472
5.5.2.1	Synthesis	473
5.5.2.2	Characterization	473
5.5.2.3	Water Contact Angle (CA) Measurement	474
5.5.2.4	Structure	474
5.5.2.5	Growth Mechanism	476
5.5.2.6	PL Properties	478
5.5.2.7	Superhydrophobic Properties	478
5.6	Synthesis, Characterization, and Application of 3D Carbonate Nanostructures	481
5.6.1	CaCO ₃ 3D Superstructures	481
5.6.1.1	Synthesis	482
5.6.1.2	Surface Modification	482
5.6.1.3	Characterization	482
5.6.1.4	Structure	482
5.6.1.5	Growth Mechanism	486
5.6.1.6	Wettability	488

5.6.2	BaCO ₃ 3D Superstructures	490
5.6.2.1	Synthesis	490
5.6.2.2	Characterization	490
5.6.2.3	Water Contact Angle (CA) Measurement	490
5.6.2.4	Structure	491
5.6.2.5	Growth Mechanism	494
5.6.2.6	Wettability	494
