Series Preface *XVII*

Preface *XIX*

1	Surface Electrochemistry with Pt Single-Crystal Electrodes	1
	<i>Victor Climent and Juan M. Feliu</i>	
1.1	Introduction	1
1.2	Concepts of Surface Crystallography	2
1.3	Preparation of Single-Crystal and Well-Oriented Surfaces	9
1.4	Understanding the Voltammetry of Platinum	13
1.4.1	CO Charge Displacement Experiment	15
1.4.2	Stepped Surfaces	18
1.5	Potential of Zero Charge of Platinum Single Crystals	24
1.5.1	Total Charge Curves in Coulometric Analysis	29
1.5.2	Model for the Estimation of the Potential of Zero Free Charge	32
1.5.3	Applications of Electrocapillary Equation	32
1.6	The Laser-Induced Temperature Jump Method and the Potential of Maximum Entropy	34
1.7	Electrocatalytic Studies with Single-Crystal Electrodes	40
1.7.1	Carbon Monoxide on Platinum	40
1.7.2	Oxygen Reduction	43
1.8	Concluding Remarks	47
	Acknowledgments	49
	References	49
2	Electrochemically Shape-Controlled Nanoparticles	59
	<i>Lu Wei, Na Tian, Zhi Y. Zhou, and Shi G. Sun</i>	
2.1	Introduction	59
2.2	Metal Nanoparticles of High-Index Facets and High Surface Energy	60
2.2.1	NPs of $\{hk0\}$ High-Index Facets	61
2.2.2	NPs of $\{hkk\}$ High-Index Facets	66
2.2.3	NPs of $\{hhl\}$ High-Index Facets	66
2.2.4	NPs of $\{hkl\}$ High-Index Facets	69

2.2.5	Electrochemistry-Mediated Shape Evolution	71
2.2.6	Electrochemical Milling and Faceting	72
2.3	Metallic Alloy Nanoparticles of High-Index Facets and High Surface Energy	73
2.3.1	Pd–Pt Alloy NPs	74
2.3.2	Pt–Rh Alloy NPs	76
2.3.3	Fe–Ni Alloy NPs	77
2.4	Metal Nanoparticles of Low-Index Facets	79
2.4.1	Fe NPs with High Surface Energy	79
2.4.2	Cu NPs	81
2.4.3	Pt NPs	83
2.5	Nanoparticles of Metal Oxides and Chalcogenides	84
2.5.1	Cuprous Oxide	84
2.5.2	Lead Sulfide	89
2.6	Summary and Perspectives	90
	Acknowledgment	91
	References	91
3	Direct Growth of One-, Two-, and Three-Dimensional Nanostructured Materials at Electrode Surfaces	97
	<i>Sapanbir S. Thind and Aicheng Chen</i>	
3.1	Introduction	97
3.2	Growth of 1D Nanomaterials	98
3.3	Nanowires	98
3.3.1	Formation of Na ₂ Ti ₆ O ₁₃ , H ₂ Ti ₃ O ₇ , and TiO ₂ Nanowires	99
3.3.2	Synthesis of Various Nanowires Using Porous Anodic Alumina (PAA) Templates	104
3.3.3	TiO ₂ Nanowires through Thermal Oxidation Treatment	106
3.4	Nanorods	108
3.4.1	Effect of Oxygen Source on the Formation of Titanium Oxide Films	110
3.5	Nanotubes	113
3.5.1	Nanotube Growth Control	116
3.5.1.1	Effect of Fluorine Concentration	116
3.5.1.2	Length and Diameter of Nanotubes	117
3.5.2	Modification of TiO ₂ Nanotubes	119
3.6	Direct Growth of Two-Dimensional Nanomaterials	121
3.6.1	Nanoplates	121
3.6.2	Graphene Oxide Nanosheets	126
3.7	Growth of Three-Dimensional Nanomaterials	128
3.7.1	Nanodendrites	128
3.7.2	Nanoflowers	130
3.8	Summary	135
	Acknowledgments	136
	References	136

4	One-Dimensional Pt Nanostructures for Polymer Electrolyte Membrane Fuel Cells 145
	<i>Gaixia Zhang and Shuhui Sun</i>
4.1	Introduction 145
4.2	Shape-Controlled Synthesis of 1D Pt Nanostructures 146
4.2.1	1D Pt Nanowires/Nanorod and Nanotubes 148
4.2.1.1	Pt Nanowires/Nanorods 148
4.2.1.2	Pt Nanotubes 161
4.2.1.3	Pt Multipods 174
4.3	1D Pt-Based Nanostructures as Electrocatalysts for PEM Fuel Cells 176
4.3.1	Reaction Mechanisms for PEMFCs 176
4.3.2	Cathode Catalysts for ORR in DHFC 176
4.3.2.1	Comparison of the Electrocatalytic Performance of Supportless Pt Nanotubes and Pt/C toward ORR 177
4.3.2.2	Comparison of the Electrocatalytic Performance of Star-Like Pt Nanowires/C and Pt/C toward ORR 179
4.3.3	Anode Catalysts for MOR in DMFC 181
4.3.3.1	Comparison of the Electrocatalytic Performance of Pt Nanowires/TiO ₂ and Pt/C toward MOR 181
4.3.3.2	Comparison of the Electrocatalytic Performance of Pt Nanowires/CNT@SnNW and Pt/C toward MOR 183
4.3.3.3	Comparison of the Electrocatalytic Performance of Pt DNTs, Pt SNTs, and Pt/C toward MOR 184
4.3.4	Anode Catalysts for FAOR in Direct Formic Acid Fuel Cell (DFAFC) 185
4.3.4.1	Comparison of the Electrocatalytic Performance of Pt Multipods, Pt Disks, and Pt Hexagons toward Formic Acid Oxidation 187
4.3.4.2	Comparison of the Electrocatalytic Performance of Pt Y-Junction, Pt Nanowires (NW), and Pt/C toward Formic Acid Oxidation 188
4.4	Conclusions and Outlook 189
	References 190
5	Investigations of Capping Agent Adsorption for Metal Nanoparticle Stabilization and the Formation of Anisotropic Gold Nanocrystals 199
	<i>Ian J. Burgess</i>
5.1	Introduction and Scope 199
5.2	The Multifunctional Role of Nanoparticle Capping Agents 199
5.3	Controlled Growth of Anisotropic Nanoparticle 201
5.4	Measuring Capping Agent Adsorption 202
5.5	Experimental Techniques 203
5.5.1	Single-Crystal Gold Electrode Preparation 203
5.5.2	Chronocoulometry and the Back-Integration Technique 205
5.5.3	Gibbs Excesses of the Acid/Base Forms of the Capping Agents 205

5.5.4	Gibbs Excesses of Co-adsorbed Capping Agents	207
5.6	Citrate-Stabilized Nanoparticles	208
5.6.1	Citrate Adsorption on Au(111) Electrodes	208
5.6.2	Citrate-Stabilized Gold Nanoparticles	210
5.7	Quaternary Ammonium Surfactants as Capping Agents	212
5.7.1	Model Surfactant Adsorption on Gold Single Crystals	212
5.7.2	Halide Co-adsorption on Gold Single Crystals	214
5.7.3	Implications for Nanoparticle Systems	215
5.8	Pyridine Derivative Capping Agents	217
5.8.1	4-Dimethylaminopyridine (DMAP)-Stabilized Au Nanoparticles	217
5.8.2	DMAP Adsorption on Polycrystalline Au	219
5.8.3	Competitive Adsorption Effects	226
5.8.4	DMAP Adsorption on Single-Crystal Au Surfaces	229
5.8.5	Directed Growth Using DMAP as a Capping Agent	231
5.8.6	4-Methoxypyridine (MOP)-Stabilized Au Nanoparticles	235
5.9	Conclusions and Perspectives	239
	Acknowledgments	239
	References	240
6	Intercalation of Ions into Nanotubes for Energy Storage – A Theoretical Study	247
	<i>Leila Mohammadzadeh, Aleksej Goduljan, Fernanda Juarez, Paola Quaino, Elizabeth Santos, and Wolfgang Schmickler</i>	
6.1	Introduction	247
6.2	Ionization in Nanotubes	248
6.3	Electrostatic Interactions	250
6.4	Details of the Investigated Systems	251
6.5	Ionic Charges	252
6.6	Effect of Ion Insertion on the Band Structure	253
6.7	Screening of the Coulomb Potential	255
6.7.1	Potential along the Axis	255
6.7.2	Effective Image Radius	257
6.8	Energetics of Ion Insertion	259
6.8.1	Optimum Position	259
6.8.2	Insertion Energies in CNTs	261
6.8.2.1	Anions in CNTs	261
6.8.2.2	Cations in CNTs	262
6.8.3	Ions in Gold Nanotubes	262
6.9	Capacity of a Narrow Nanotube in Contact with an Ionic Liquid	264
6.10	Other Literature	266
6.11	Outlook	267
	Acknowledgments	268
	References	268

7	Surface Spectroscopy of Nanomaterials for Detection of Diseases	271
	<i>Jean F. Masson and Kristy S. McKeating</i>	
7.1	An Introduction to Plasmonics	271
7.2	An Overview of Plasmonic Techniques	272
7.2.1	Surface Plasmon Resonance (SPR)	272
7.2.2	Surface-Enhanced Raman Spectroscopy (SERS)	274
7.2.3	Metal-Enhanced Fluorescence (MEF)	276
7.2.4	Electrically Conductive Plasmonic Substrates	278
7.3	Plasmonic Spectroelectrochemistry	279
7.3.1	Electrochemical SPR and LSPR	279
7.3.2	Electrochemical SERS	282
7.3.3	Metal-Enhanced Fluorescence Electrochemistry	284
7.4	Plasmonic Biosensing for the Detection of Diseases	285
7.5	Outlook and Perspectives	287
	References	288
8	Raman Spectroscopy at Nanocavity-Patterned Electrodes	295
	<i>Philip N. Bartlett</i>	
8.1	Introduction	295
8.2	Fabrication Methods	295
8.2.1	Top Down	295
8.2.2	Bottom-Up or Self-Organizing Approaches	299
8.2.3	Metal Evaporation	301
8.2.4	Electrodeposition	304
8.3	Plasmonics	307
8.3.1	Plasmonics of Nanohole Arrays	310
8.3.2	Sphere Segment Void (SSV) Plasmonics	310
8.4	Raman Spectroscopy	314
8.5	Surface-Enhanced Raman Spectroscopy	316
8.6	SERS on Nanohole Arrays	318
8.7	SERS at Sphere Segment Void (SSV) Surfaces	319
8.8	Some Applications in Electrochemical SERS	324
8.9	Other Surface-Enhanced Phenomena	324
8.10	Conclusions	326
	Acknowledgment	327
	References	327
9	Shell-Isolated Nanoparticle-Enhanced Raman Spectroscopy (SHINERS) of Electrode Surfaces	339
	<i>Jian F. Li, Rajapandiyan Panneerselvam, and Zhong Q. Tian</i>	
9.1	Introduction	339
9.2	Advantages of Isolated Mode over Contact Mode	342
9.3	3D-FDTD Simulations	343
9.4	Synthesis of SHINs	345
9.5	Characterization of SHINs	348

9.6	Applications of SHINERS in Electrochemistry	350
9.6.1	SHINERS Study of Pyridine Adsorption on Au(<i>hkl</i>) and Pt(<i>hkl</i>) Single-Crystal Electrodes	351
9.6.2	SHINERS for Probing the Benzotriazole Film Formation on Cu(100), Cu(111), and Cu(Poly) Electrodes	353
9.6.3	SHINERS Study of Ionic Liquids at Single-Crystal Electrode Surfaces	354
9.6.4	<i>In Situ</i> Investigation of Electrooxidation Processes at Gold Single-Crystal Surfaces	357
9.6.5	Quantitative Analysis of Temporal Changes in the Passive Layer at a Gold Electrode Surface	359
9.7	Summary and Outlook	361
	Acknowledgments	362
	References	362
10	Plasmonics-Based Electrochemical Current and Impedance Imaging	373
	<i>Xiaonan Shan, Yixian Wang, and Nongjian Tao</i>	
10.1	Introduction	373
10.2	Principle of Plasmonics-Based Electrochemical Current Microscopy (PECM)	374
10.2.1	Electrochemical Reactions	374
10.2.2	Relationship between Current and SPR Signals	375
10.3	Principle of Plasmonics-Based Electrochemical Impedance Microscopy (PEIM)	377
10.4	Imaging Local Electrochemical Current by PECM	379
10.4.1	Experiment Setup	379
10.4.2	Mapping Local Redox Reactions with PECM	380
10.4.3	Detecting Trace Chemicals	381
10.4.4	Spatial Resolution and Current Detection Limit	383
10.4.5	Imaging Local Square-Wave Voltammetry	386
10.5	Imaging the Electrocatalytic Activity of Single Nanoparticles	389
10.5.1	Experiment	390
10.5.2	Imaging Electrocatalytic Current of Single Pt Nanoparticles	390
10.6	Mapping Local Quantum Capacitance of Graphene with PEIM	393
10.6.1	Experiments	394
10.6.2	Imaging Local Quantum Capacitance of Graphene	394
10.6.3	Quantum Capacitance	396
10.6.4	Local Quantum Capacitance and Charge Impurity Effect	398
10.7	Conclusions	398
	References	399
