Preface *xiii*

List of Contributors *xv*

Part I Introduction 1

1 Introduction to Reactive Extrusion 3

Christian Hopmann, Maximilian Adamy, and Andreas Cohnen

References 9

Part II Introduction to Twin-Screw Extruder for Reactive Extrusion 11

2 The Co-rotating Twin-Screw Extruder for Reactive Extrusion 13

Frank Lechner

2.1 Introduction 13

2.2 Development and Key Figures of the Co-rotating Twin-Screw Extruder 14

2.3 Screw Elements 16

2.4 Co-rotating Twin-Screw Extruder – Unit Operations 22

2.4.1 Feeding 23

2.4.2 Upstream Feeding 23

2.4.3 Downstream Feeding 24

2.4.4 Melting Mechanisms 24

2.4.5 Thermal Energy Transfer 24

2.4.6 Mechanical Energy Transfer 25

2.4.7 Mixing Mechanisms 25

2.4.8 Devolatilization/Degassing 25

2.4.9 Discharge 26

2.5 Suitability of Twin-Screw Extruders for Chemical Reactions 26

2.6 Processing of TPE-V 27

2.7 Polymerization of Thermoplastic Polyurethane (TPU) 29

- 2.8 Grafting of Maleic Anhydride on Polyolefines 31
- 2.9 Partial Glycolysis of PET 32
- 2.10 Peroxide Break-Down of Polypropylene 33
- 2.11 Summary 35
- References 35

Part III Simulation and Modeling 37

3 Modeling of Twin Screw Reactive Extrusion: Challenges and Applications 39

Françoise Berzin and Bruno Vergnes

- 3.1 Introduction 39
 - 3.1.1 Presentation of the Reactive Extrusion Process 39
 - 3.1.2 Examples of Industrial Applications 40
 - 3.1.3 Interest of Reactive Extrusion Process Modeling 41
- 3.2 Principles and Challenges of the Modeling 41
 - 3.2.1 Twin Screw Flow Module 42
 - 3.2.2 Kinetic Equations 44
 - 3.2.3 Rheokinetic Model 44
 - 3.2.4 Coupling 45
 - 3.2.5 Open Problems and Remaining Challenges 45
- 3.3 Examples of Modeling 46
 - 3.3.1 Esterification of EVA Copolymer 46
 - 3.3.2 Controlled Degradation of Polypropylene 50
 - 3.3.3 Polymerization of ϵ -Caprolactone 55
 - 3.3.4 Starch Cationization 59
 - 3.3.5 Optimization and Scale-up 61
- 3.4 Conclusion 65
- References 66

4 Measurement and Modeling of Local Residence Time Distributions in a Twin-Screw Extruder 71

Xian-Ming Zhang, Lian-Fang Feng, and Guo-Hua Hu

- 4.1 Introduction 71
- 4.2 Measurement of the Global and Local RTD 72
 - 4.2.1 Theory of RTD 72
 - 4.2.2 In-line RTD Measuring System 73
 - 4.2.3 Extruder and Screw Configurations 75
 - 4.2.4 Performance of the In-line RTD Measuring System 76
 - 4.2.5 Effects of Screw Speed and Feed Rate on RTD 77
 - 4.2.6 Assessment of the Local RTD in the Kneading Disk Zone 79
- 4.3 Residence Time, Residence Revolution, and Residence Volume Distributions 81
 - 4.3.1 Partial RTD, RRD, and RVD 82
 - 4.3.2 Local RTD, RRD, and RVD 86

4.4	Modeling of Local Residence Time Distributions	88
4.4.1	Kinematic Modeling of Distributive Mixing	88
4.4.2	Numerical Simulation	89
4.4.3	Experimental Validation	92
4.4.4	Distributive Mixing Performance and Efficiency	93
4.5	Summary	97
	References	98
5	In-process Measurements for Reactive Extrusion Monitoring and Control	101
	<i>José A. Covas</i>	
5.1	Introduction	101
5.2	Requirements of In-process Monitoring of Reactive Extrusion	103
5.3	In-process Optical Spectroscopy	111
5.4	In-process Rheometry	116
5.5	Conclusions	125
	Acknowledgment	126
	References	126
	Part IV Synthesis Concepts	133
6	Exchange Reaction Mechanisms in the Reactive Extrusion of Condensation Polymers	135
	<i>Concetto Puglisi and Filippo Samperi</i>	
6.1	Introduction	135
6.2	Interchange Reaction in Polyester/Polyester Blends	138
6.3	Interchange Reaction in Polycarbonate/Polyester Blends	143
6.4	Interchange Reaction in Polyester/Polyamide Blends	148
6.5	Interchange Reaction in Polycarbonate/Polyamide Blends	155
6.6	Interchange Reaction in Polyamide/Polyamide Blends	159
6.7	Conclusions	166
	References	167
7	<i>In situ</i> Synthesis of Inorganic and/or Organic Phases in Thermoplastic Polymers by Reactive Extrusion	179
	<i>Véronique Bounor-Legaré, Françoise Fenouillot, and Philippe Cassagnau</i>	
7.1	Introduction	179
7.2	Nanocomposites	179
7.2.1	Synthesis of <i>in situ</i> Nanocomposites	181
7.2.2	Some Specific Applications	183
7.2.2.1	Antibacterial Properties of PP/TiO ₂ Nanocomposites	183
7.2.2.2	Flame-Retardant Properties	184
7.2.2.3	Protonic Conductivity	186
7.3	Polymerization of a Thermoplastic Minor Phase: Toward Blend Nanostructuration	188

- 7.4 Polymerization of a Thermoset Minor Phase Under Shear 196
 - 7.4.1 Thermoplastic Polymer/Epoxy-Amine Miscible Blends 197
 - 7.4.2 Examples of Stabilization of Thermoplastic Polymer/Epoxy-Amine Blends 202
 - 7.4.3 Blends of Thermoplastic Polymer with Monomers Crosslinking via Radical Polymerization 202
- 7.5 Conclusion 203
- References 204

- 8 Concept of (Reactive) Compatibilizer-Tracer for Emulsification Curve Build-up, Compatibilizer Selection, and Process Optimization of Immiscible Polymer Blends 209**
Cai-Liang Zhang, Wei-Yun Ji, Lian-Fang Feng, and Guo-Hua Hu
 - 8.1 Introduction 209
 - 8.2 Emulsification Curves of Immiscible Polymer Blends in a Batch Mixer 210
 - 8.3 Emulsification Curves of Immiscible Polymer Blends in a Twin-Screw Extruder Using the Concept of (Reactive) Compatibilizer 213
 - 8.3.1 Synthesis of (Reactive) Compatibilizer-Tracers 213
 - 8.3.2 Development of an In-line Fluorescence Measuring Device 214
 - 8.3.3 Experimental Procedure for Emulsification Curve Build-up 216
 - 8.3.4 Compatibilizer Selection Using the Concept of Compatibilizer-Tracer 219
 - 8.3.5 Process Optimization Using the Concept of Compatibilizer-Tracer 220
 - 8.3.5.1 Effect of Screw Speed 220
 - 8.3.5.2 Effects of the Type of Mixer 221
 - 8.3.6 Section Summary 221
 - 8.4 Emulsification Curves of Reactive Immiscible Polymer Blends in a Twin-Screw Extruder 222
 - 8.4.1 Reaction Kinetics between Reactive Functional Groups 222
 - 8.4.2 (Non-reactive) Compatibilizers Versus Reactive Compatibilizers 223
 - 8.4.3 An Example of Reactive Compatibilizer-Tracer 224
 - 8.4.4 Assessment of the Morphology Development of Reactive Immiscible Polymer Blends Using the Concept of Reactive Compatibilizer 225
 - 8.4.5 Emulsification Curve Build-up in a Twin-Screw Extruder Using the Concept of Reactive Compatibilizer-Tracer 229
 - 8.4.6 Assessment of the Effects of Processing Parameters Using the Concept of Reactive Compatibilizer-Tracer 233
 - 8.4.6.1 Effect of the Reactive Compatibilizer-Tracer Injection Location 233
 - 8.4.6.2 Effect of the Blend Composition 235
 - 8.4.6.3 Effect of the Geometry of Screw Elements 238
 - 8.5 Conclusion 241
 - References 241

Part V Selected Examples of Synthesis 245

- 9 Nano-structuring of Polymer Blends by *in situ* Polymerization and *in situ* Compatibilization Processes 247**
Cai-Liang Zhang, Lian-Fang Feng, and Guo-Hua Hu
- 9.1 Introduction 247
- 9.2 Morphology Development of Classical Immiscible Polymer Blending Processes 248
- 9.2.1 Solid–Liquid Transition Stage 249
- 9.2.2 Melt Flow Stage 251
- 9.2.3 Effect of Compatibilizer 253
- 9.3 *In situ* Polymerization and *in situ* Compatibilization of Polymer Blends 255
- 9.3.1 Principles 255
- 9.3.2 Classical Polymer Blending Versus *in situ* Polymerization and *in situ* Compatibilization 255
- 9.3.3 Examples of Nano-structured Polymer Blends by *in situ* Polymerization and *in situ* Compatibilization 257
- 9.3.3.1 PP/PA6 Nano-blends 257
- 9.3.3.2 PPO/PA6 Nano-blends 264
- 9.3.3.3 PA6/Core–Shell Blends 264
- 9.4 Summary 267
- References 268
- 10 Reactive Comb Compatibilizers for Immiscible Polymer Blends 271**
Yongjin Li, Wenyong Dong, and Hengti Wang
- 10.1 Introduction 271
- 10.2 Synthesis of Reactive Comb Polymers 272
- 10.3 Reactive Compatibilization of Immiscible Polymer Blends by Reactive Comb Polymers 274
- 10.3.1 PLLA/PVDF Blends Compatibilized by Reactive Comb Polymers 274
- 10.3.1.1 Comparison of the Compatibilization Efficiency of Reactive Linear and Reactive Comb Polymers 274
- 10.3.1.2 Effects of the Molecular Structures on the Compatibilization Efficiency of Reactive Comb Polymers 278
- 10.3.2 PLLA/ABS Blends Compatibilized by Reactive Comb Polymers 282
- 10.4 Immiscible Polymer Blends Compatibilized by Janus Nanomicelles 289
- 10.5 Conclusions and Further Remarks 293
- References 293

11 Reactive Compounding of Highly Filled Flame Retardant Wire and Cable Compounds 299*Mario Neuenhaus and Andreas Niklaus*

- 11.1 Introduction 299
- 11.2 Formulations and Ingredients 300
 - 11.2.1 Typical Formulation and Variations for the Evaluation 300
 - 11.2.2 Principle of Silane Crosslinking by Reactive Extrusion 301
 - 11.2.3 Production of Aluminum Trihydroxide (ATH) 301
 - 11.2.4 Mode of Action of Aluminum Trihydroxide 302
 - 11.2.5 Selection of Suitable ATH Grades 303
- 11.3 Processing 306
 - 11.3.1 Compounding Line 306
 - 11.3.2 Compounding Process for Cross Linkable HFFR Products 308
 - 11.3.2.1 Two-Step Compounding Process 308
 - 11.3.2.2 One-Step Compounding Process 309
 - 11.3.2.3 Advantages and Disadvantages of the Two Process Concepts (Two-Step vs One-Step) 313
- 11.4 Evaluation and Results on the Compound 314
 - 11.4.1 Crosslinking Density 314
 - 11.4.2 Mechanical Properties 315
 - 11.4.3 Aging Performance 315
 - 11.4.4 Fire Performance on Laboratory Scale 317
 - 11.4.5 Results of the Non-Polar Compounds 318
- 11.5 Cable Trials 322
 - 11.5.1 Fire Performance of Electrical Cables According to EN 50399 322
 - 11.5.2 Burning Test on Experimental Cables According to EN 50399 323
- 11.6 Conclusions 328
- References 329

12 Thermoplastic Vulcanizates (TPVs) by the Dynamic Vulcanization of Miscible or Highly Compatible Plastic/Rubber Blends 331*Yongjin Li and Yanchun Tang*

- 12.1 Introduction 331
- 12.2 Morphological Development of TPVs from Immiscible Polymer Blends 333
- 12.3 TPVs from Miscible PVDF/ACM Blends 334
- 12.4 TPVs from Highly Compatible EVA/EVM Blends 338
- 12.5 Conclusions and Future Remarks 342
- References 342

Part VI Selected Examples of Processing 345

- 13 Reactive Extrusion of Polyamide 6 with Integrated Multiple Melt Degassing 347**
Christian Hopmann, Eike Klünker, Andreas Cohnen, and Maximilian Adamy
- 13.1 Introduction 347
- 13.2 Synthesis of Polyamide 6 347
- 13.2.1 Hydrolytic Polymerization of Polyamide 6 347
- 13.2.2 Anionic Polymerization of Polyamide 6 348
- 13.3 Review of Reactive Extrusion of Polyamide 6 in Twin-Screw Extruders 352
- 13.4 Recent Developments in Reactive Extrusion of Polyamide 6 in Twin-Screw Extruders 354
- 13.4.1 Reaction System and Experimental Setup 354
- 13.4.2 Influence of Number of Degassing Steps and Activator Content on Residual Monomer Content and Molecular Weight 356
- 13.4.3 Influence of Amount and Type of Entrainer on Residual Monomer Content and Molecular Weight 365
- 13.4.4 Influence of Polymer Throughput on Residual Monomer Content 367
- 13.5 Conclusion 368
- References 369
- 14 Industrial Production and Use of Grafted Polyolefins 375**
Inno Rappthel, Jochen Wilms, and Frederik Piestert
- 14.1 Grafted Polymers 375
- 14.2 Industrial Synthesis of Grafted Polymers 376
- 14.2.1 Melt Grafting Technology 377
- 14.2.2 Solid State Grafting Technology 378
- 14.3 Main Applications 380
- 14.3.1 Use as Coupling Agents 380
- 14.3.2 Grafted Polyolefins for Polymer Blending 392
- 14.3.2.1 Reactive Blending of Polyamides 392
- 14.3.3 Grafted TPE's for Overmolding Applications 400
- 14.4 Conclusion and Outlook 403
- References 404
- Index 407**
