

## Index

### a

- active matrix (AM) backplane 16–19
- adhesion 91
- anisotropic conductive paste/films (ACP/ACF) 407
- anti-solvent process 128

### b

- biomolecule analysis 332
- biosensors 84, 97
- bipolar junction transistors (BJTs) 231
- block copolymer method 220
- brain machine interface (BMI) applications 72

### c

- carbon black nanoparticles (CB NPs) 16
- carbon nanotube (CNTs) 2, 55, 238
  - active matrix (AM) backplane 16–19
  - conventional microfabrication processes 10
  - dry processes and solution processes 8
  - integrated circuits 11
  - printing process 36, 39
  - single-wall carbon nanotube (SWCNT) 7–10
  - stretchable conductors 21–23
  - stretchable strain sensor 23
  - stretchable thin-film transistors 27–34
  - thin-film transistors (TFTs) 10–11

- chemical vapor deposition (CVD) 165, 221
- complementary metal-oxide semiconductor (CMOS) 41, 67, 215
- conductive additives (CNT) 179
- conductive nanosheets
  - electrical properties 260–262
  - electrochemical properties 267
  - humidity sensors 272
  - inkjet printing 256
  - mechanical properties 263–267
  - microactuators 272–274
  - PEDOT:PSS conductive nanosheet 255
  - roll-to-roll (R2R) gravure-printing 258
  - structural properties 262–263
  - surface electromyogram (sEMG) recording
    - alkaline components 271
    - electrical resistance 269
    - electrodes 269
    - normalized resistance variations 271
    - personal monitoring systems 269
    - signal-to-noise ratio (SNR) 269
  - tattoo conductive nanosheets 274–277
- conductive polymers 324
- conventional bulk semiconductors 19
- conventional microfabrication processes 10, 44

**d**

- deep reactive-ion etching (DRIE) 236
- density functional theory (DFT) 146
- deterministic transfer methods 354
- digital printing 36
- direct device-to-satellite
  - communication 230
- direct tunnelling mechanism 219

**e**

- electrical measurements
  - [electrocorticography (ECoG) 381
- electric double-layer supercapacitors (EDLCs) 162
  - active carbon 164
  - binders and conductive additives 164
  - carbon black nanoparticles 168
  - carbon nanotube (CNT) 168
  - charging and discharging processes 163
  - CH<sub>4</sub>-plasma treatment 170
  - CVD strategy 166
  - electrode-electrolyte interfaces 165, 170
  - electrode materials 165
    - graphene based electrode 168
    - graphene hydrogels and aerogels 171
    - graphene oxide 166
    - mesoporous carbon nanospheres 168
    - 1D micromaterials 165
    - PMMA spheres 169
    - 3D porous structures 169
    - 2D materials 166, 170
    - 0D (nanoparticles) 168
  - electrode materials 385
  - electrolyte-gated organic field-effect transistors (EGOFETs) 57, 60
  - electron-deficiency 147
  - electron-transporting semiconductors 58
  - electrostatic self-assembled metal nanoparticles 220
  - electrostatic self-assembly 26, 220

**f**

- fabrication process 175, 274
- Fick's diffusion equation 141
- field-effect transistors (FETs) 7, 231
- finite element analysis (FEA) 371
- finite element modeling (FEM) 70, 355
- flexible and stretchable devices
  - e-skin device demonstrations 2
  - hybrid system 2
  - organic and inorganic materials 3
- flexible and stretchable electronic device 2
  - carbon nanotubes-based materials 358
  - communication and regulation, for nervous system 364
  - electrophysiology and optogenetics, for brain 362
  - fabrication approach 358
  - materials, synthesis and composites 352
  - mechanical strains 357
  - multi-functional electronic sensors 358
  - organic pressure sensor 357
  - semiconductor procedures 357
  - skin-like electronics/optoelectronics 367
  - SWNT film 358
  - transient, bioresorbable systems 370
- flexible electronics
  - carbon nanotube integrated circuits 11
  - thin-film transistors (TFTs) 10–11
  - macro-scale flexible electronics 411
  - signal processing 411
  - wireless circuits and battery 411
- flexible photovoltaics systems
  - advantages 105
  - copper indium gallium selenide (CIGS)
    - device stability 113
    - molybdenum foils and titanium foils 113
  - vacuum deposition technique 114

- current–voltage ( $I$ – $V$ ) characteristics 107
  - electric neutrality 106
  - flexible organic–inorganic hybrid photovoltaic systems
    - device structure and working mechanisms 124
    - fundamental properties 123, 124
    - materials and methods 125
