

## Index

### a

achiral tubular nanoclusters 51–52  
 aerosols 28  
 agglomerate 28  
 aggregates 28  
 Ag nanomaterial 65  
 alginate 233  
 arc discharge method 21  
 armchair type carbon nanoclusters 51  
 artificial biomaterials 192  
 artificial dermis 249  
 atomic force microscope (AFM)  
 177–178  
 autonomous self-assembly 266

### b

bioactive glasses and glass-ceramics  
 275–276  
 bio artificial liver support system 248  
 bioceramics-tissue attachment and  
 bioceramic classification. 224  
 biocompatibility 220  
 biological constituents 217  
 biological properties of biomaterials  
 215–220  
 biomaterials 1  
 body systems 191–192  
 ceramic biomaterials 222–230  
 composite 199  
 general requirements for 190–191  
 goals of 189  
 main problems of 189  
 mechanical properties 203  
 metallic 193–199

nanostructured CaP composites  
 200–203  
 polymeric biomaterials 230–235  
 purpose 189  
 biomimicry 266  
 biopolymers 217  
 bone cements and tissue interface  
 formation 203  
 bone tissue engineering 262–264  
 brain implants 242–243  
 BSCCO/SrTiO<sub>3</sub> 105

### c

carbon fiber (CF) composite materials  
 202–203  
 carbon nanotubes  
 mechanical properties and physical  
 parameters 52–53  
 structural characteristics 54  
 types and classification 49–52  
 carbon tubular nanoclusters 49  
 carboxymethyl cellulose (CMC) 215  
 cardiac pacing systems 254  
 and implantable cardiac defibrillators  
 254  
 catalysis 160–163  
 cavitation-hydrodynamic method 8  
 centered (double-layered) fullerenes  
 43  
 centrifugal mill 3  
 centrifugal spraying 10  
 ceramic biomaterials 222–230  
 characterization tools in  
 nanotechnology 172
