

## Index

### **a**

acid phosphatase (ACP) detection 337  
 adenosine deaminase (ADA) 174, 178  
 aggregation-caused quenching  
     (ACQ) 185  
 ammonium conjugated polyelectrolytes  
     (CPEs)  
 atom transfer radical polymerization  
     (ATRP) 17  
 direct polymerization strategy 15  
 Gilch coupling reaction 19  
 Heck coupling reaction 17  
 postpolymerization method 14–15  
 Sonogashira reaction 19  
 Suzuki cross-coupling conditions 14  
 Suzuki polymerization 15  
 Williamson reaction 14  
 Witting–Horner condensation  
     reaction 17  
 Witting polymerization method 17  
 antifouling 362–363  
 atom transfer radical polymerisation  
     (ATRP) technique 374

### **b**

*Bacillus subtilis* 327  
 bilirubin detection 338  
 bioluminescence 277  
 biomarkers 258  
 biosensing 365–366  
 bis(diphenylaminostyryl)benzene  
     (DPSB) 150  
 boron dipyrromethene (BODIPY) 62

### **c**

*C. albicans* fungus 326  
 calmodulin (CaM) 183  
 cancer biomarker detection  
     DNA Methylation 330  
     hyaluronidase (HAase) detection 335  
     MicroRNAs (miRNA) detection 334  
     spermine detection 335  
 cancer photothermal therapy  
     donor-acceptor (D-A) conjugated  
         polymers 299–301  
     PANI nanoparticles 296–297  
     PEDOT:PSS-PEG  
         nanoparticles 298–299  
     PPy nanoparticles 297  
 cellular imaging, fluorescence imaging  
     boron dipyrromethene (BODIPY)  
         units 74  
     fluorescent PLGA nanoparticles 74  
     *in vitro* imaging 74  
     *in vivo* imaging 76  
     NIR cellular imaging 74  
 combined photothermal-  
     chemotherapy 309–312  
 concanavalin A (Con A) 183  
 conducting polymers (CPs),  
     biointerfaces  
     antifouling 362–365  
     biosensing 365–366  
     emerging bioelectronics materials  
         based 372  
     stimuli-responsive materials 367–372  
     tissue engineering 366–367

- conjugated polyelectrolytes (CPEs) 150  
 anionic CPEs 2, 4–14  
 carboxylated CPEs  
   Gilch dehydrochlorination  
     polymerization 11  
   Heck and Gilch polymerization  
     method 10  
   oxidative polymerization 9  
   postfunctionalization approach 9  
   postpolymerization method 11  
   Sonogashira coupling reaction 11  
   Sonogashira reaction  
     conditions 12  
   Stille coupling polymerization 8  
   Suzuki–Miyaura reaction  
     conditions 10  
   Suzuki polymerization 9  
   Yamamoto polymerization 8  
 cationic CPEs 2, 14–21  
 CpCo(CO)<sub>2</sub> catalyzed  
   homopolycyclotrimerization 2  
 phosphonated CPEs 13–14  
 phosphonium CPEs 21  
 polymerization methods 3  
 pyridinium CPEs 20  
 zwitterionic CPEs 2, 21–22
- conjugated polymer nanoparticles (CPNPs)  
   anion detection and imaging 72  
   aqueous oxidative  
     polymerization 35  
   bio-imaging and cell tracking  
     applications 38  
   biological imaging and sensing 62  
   cell culture and cell tracking  
     experiments 38  
   cell labeling and fluorescence  
     imaging 63  
   cellular imaging, fluorescence  
     imaging 74–77  
 conjugated polyelectrolytes (CPEs) 150–152  
 direct functionalization method 63  
 direct polymerization  
   emulsion polymerization 46–47  
   microemulsion polymerization  
     49–50
- miniemulsion polymerization 48–49  
 dye-doped dielectric particles 35  
 emission of 38  
 fabrication  
   miniemulsions 26–28  
   nanoprecipitation 28–30  
 fluorescent probes and vehicles 35  
 hybrid materials 152–158  
 Knoevenagel-type dispersion  
   polycondensation 38  
 mini-emulsion method 60  
 molecular fluorescent dyes 35  
 multimodality imaging 77–80  
 nanoprecipitation method 60  
 2PEM contrast agents 146–158  
 photoacoustic imaging 77  
 photo-oxidation and photo-  
   bleaching 35  
 polyacetylene (PA) 35  
 post-polymerization techniques  
   microfluidic techniques 42–45  
   miniemulsification 41–42  
   nanoprecipitation  
     technique 39–41  
     self-assembly 45  
   protease detection 71  
   self-assembly method 60  
   two-photon fluorescent  
     properties 62
- conjugated polymers (CP)  
   bio-dopants 361  
   bioelectronics materials 372  
   biointerfaces  
     antifouling 362  
     biosensing 365  
     stimuli-responsive materials 367  
     tissue engineering 366  
   biomolecule attachment 361  
   cancer treatment  
     combined photothermal-  
       chemotherapy 313  
     photodynamic and photothermal  
       therapy 307–309  
   copolymers and polymer blends 361  
   CP-based graft copolymers  
     ATRP techniques 374

- CRP technique 373  
 grafting from approach 378, 382  
 grafting from method 373  
 grafting through  
   approach 374–377  
   grafting through method 372  
   grafting to approach 377–378  
   grafting to method 373  
   polymerisation reactions 373  
 dual-modality imaging 99–101  
 and oligomers 321–322  
 one-photon excitation imaging  
   contrast agents 138–140  
 PDT 271, 277  
 photosensitizers  
   energy transfer systems 274  
   far red and near IR emitting  
     conjugated polymers 274  
     hybrid photosensitizers 277  
   photothermal therapy 314  
 Conjugated polymers (CP)-based  
   fluorescent probes  
   *in vivo* cell tracking 95–97  
   *in vivo* tumor imaging  
     CP dots studies 91  
     EPR effect 89  
     nanotechnology 88  
     NIR light and nanotechnology 89  
   NIR-II emissive CP dot 101  
   sentinel lymph node (SLN)  
     mapping 101  
   stimuli-responsive fluorescence  
     imaging 92–95  
   two-photon fluorescence imaging  
     (TPFI) 98–99  
 controlled radical polymerisation (CRP)  
   techniques 373  
 conventional cell harvesting  
   techniques 367  
 conventional one-photon excitation  
   (1PE) fluorescence  
   microscopy 135
- d**  
 diketopyrrolopyrrole (DPP) 119  
 dimethylformamide (DMF) 50  
 direct polymerization
- emulsion polymerization 46, 48  
 microemulsion polymerization 49  
 disease diagnostics  
   acid phosphatase (ACP)  
     detection 337  
   bilirubin detection 338  
   cancer biomarker detection  
     DNA Methylation 329–330  
     hyaluronidase (HAase)  
       detection 335  
     MicroRNAs (miRNA)  
       detection 333–334  
     spermine detection 335  
   pathogen detection 322–327  
 donor-acceptor (D-A) conjugated  
   polymers 299  
 dual-mode fluorescence 80
- e**  
*E. coli* 323  
 electroactive gating 256  
 electrochemical  
   polymerization 251–252  
 electrochemical synthesis 252  
 electro-conductive hydrogels 253, 260  
 electropumping 255  
 enhanced permeability and retention  
   (EPR) 188, 270, 299  
 Ethidium bromide (EB) 177  
 ethylenedioxothiophene (EDOT) 47  
 exogenous contrast agent labeling  
   method 95
- f**  
 Far-red/near-infrared probes 190  
 FBT 183  
 fibronectin 142  
 fluorescence/dark-field Imaging 193, 206  
 fluorescence resonance energy transfer  
   (FRET) 137  
   one-step FRET 172  
   two-step FRET 177
- g**  
 Gadolinium ion ( $Gd^{3+}$ ) 204  
 galvanostatic polymerization 251

- gene delivery  
**C**  
 anionic nucleic acids 218  
 backbone flexibility and  
 biodegradability 221  
 backbone rigidity and  
 hydrophobicity 218  
 biodegradable polymeric  
 nanoparticles 222  
 caveolae-mediated endocytosis  
 (CvME) 220  
 cellular interactions and entry  
 pathways 220  
 CPN hydrophobicity 219  
 CPNs and CPEs labeling and  
 delivery efficiency 221  
 disulfide-containing carriers 220  
 fluorescent core-shell  
 nanoparticles 220  
 hydrophobic units and positive  
 charges 218  
 micropinocytosis 220  
 nanoparticle entry  
 mechanism 219  
 Pearson's correlation coefficient  
 (PCC) 222  
 PPB properties 222  
 $\pi$ -electron system 216  
 transfection efficiency 220  
 fluorescent imaging agents 216  
 functional organic fluorescent  
 dyes 216  
 non-invasive visualization 216  
 non-viral vectors 217  
 plasmid DNA (pDNA) delivery  
 BIP-PGEA2 nanoparticles 226  
 cationic polythiophene  
 derivatives 225  
 charge density and  
 hydrophobicity 222  
 DNA alkylation and gene  
 regulation 225  
 HCPEPEI-1 and HCPEPEI-2  
 conjugates 224  
 nuclease degradation 224  
 OFBT-A/TR-T5  
 nanocomposites 225  
 polyethyleneimines (PEIs) 224  
 positively charged synthetic  
 carriers 215  
 real-time setting 216  
 small interfering RNA (siRNA)  
 delivery  
 cationic CPE nanoparticles 230  
 cationic dendritic polyfluorene  
 (PFP) 230  
 cationic PFNBr nanoparticles 230  
 conjugated polythiophenes 229  
 endosomal disruption 230  
 enzymatic degradation 232  
 hydrophobic moieties 228  
 minimal toxic side effect 228  
 PEI-co-polythiophenes  
 copolymers 229  
 plant protoplasts 228  
 reverse transcription quantitative  
 polymerase chain reaction  
 (RT-qPCR) 229  
 therapeutic intervention 228  
 viral carriers 228  
 viral vectors and polyethylene  
 glycol 228  
 viral and non-viral systems 215  
**G-quadruplex** 175
- h***  
 Heck polymerization 6  
 hybrid materials 152, 154–159  
 hydrophobic fluorophore magnesium  
 phthalocyanine (MgPc) 152
- i***  
 implantable biosensors 259, 261  
 inductively coupled plasma-atomic  
 emission spectrometry  
 (ICP-AES) 297  
*in vivo* real-time sentinel lymph node  
 (SLN) imaging 190
- k***  
 Knoevenagel polymerization 6
- l***  
 label-free biosensors 174

**m**

- magnetic resonance imaging (MRI) 80  
 fluorescence imaging 201  
 photoacoustic imaging 209  
 matrix-encapsulation method 140  
 micelle/silica coprotection  
     strategy 157  
 microfluidic techniques 42–45  
 miniemulsification 41  
 multi-modal imaging 77, 79–80, 125,  
     127, 128

**n**

- NanoDRONE 92  
 nanoprecipitation technique 39–41  
 near-infrared (NIR) fluorescence 87  
 neural regeneration, neural cell and  
     tissue scaffolds 257  
 neural therapy  
     biosensors and prostheses 258–260  
     conductive polymers  
         conductive polymer-based  
             nanofibers 250  
         doping process 246  
         electrical stimulation and  
             modulation 247  
         electroactive conductive  
             polymers 246  
         electrospinning, for micro-and  
             nanoscale fibers 253–254  
         functionalization 254  
         hydrogels and nanofibers 245  
         modification of 255  
         polyaniline (PAni) 248  
         polymer hydrogels 249–250  
         polypyrrole (PPy) 247  
         polythiophene (PTh) and  
             PEDOT 248  
         synthesis and doping 251–252  
     electroactive biomaterials 244  
     electro-conductive hydrogels 252  
     electro-stimulated drug  
         delivery 255–256  
         neural regeneration 257  
         physicochemical properties 243  
         and regenerative medicine 243  
     neurodegenerative disorders
