

## Contents

Preface *xiii*

### Part I Nanoscale Science 1

- 1 Introduction 3**
  - References 14
  
- 2 Essential Approaches and Forces 17**
  - 2.1 Top-Down Approach 17
  - 2.2 Bottom-Up Approach 18
  - 2.3 Aggregation of Nanoparticles 19
    - 2.3.1 Sedimentation 21
    - 2.3.2 Dispersion and Transformation 22
    - 2.3.3 Homogeneous Aggregation 23
    - 2.3.4 Heteroaggregation 23
    - 2.3.5 Mineralization 24
    - 2.3.6 Homogeneous Nucleation 24
  - 2.4 Smoluchowski Aggregation Kinetics 25
  - 2.5 DLVO Theory 28
  - 2.6 Lennard–Jones Potential 30
  - 2.7 Hydrogen Bonding 31
  - 2.8 Hydrophobic Interactions 32
  - 2.9 Steric Forces 34
  - References 35
  
- 3 Thermodynamics of Nanosystems 39**
  - 3.1 Thermodynamics at Nanoscale 40
  - 3.2 Laws of Thermodynamics 41
    - 3.2.1 First Law of Thermodynamics 42
    - 3.2.2 Second Law of Thermodynamics 43
  - 3.3 Concept of Entropy 44
  - 3.4 Gibbs Equation 45
  - 3.5 Thermodynamic Properties 47
  - References 49

<b>4</b>	<b>Phase Transitions and Stability at Nanoscale</b>	<b>51</b>
4.1	Generalized Observations	51
4.2	Formation of Metastable Phases	52
4.3	Stability of Small Objects	58
4.4	Chemical Reactions in Nanosystems	61
	References	65
<b>5</b>	<b>Interactions with Biomolecules and Applications to Biology</b>	<b>69</b>
5.1	Quantum Dot–Protein Interaction	69
5.1.1	Fluorescence Studies	70
5.1.2	Effect of Protein Hydrophobicity	72
5.1.3	Stoichiometry of Binding	73
5.1.4	Effect on Secondary Structure	73
5.1.5	Hydration of Complexes	76
5.2	Nanoclay–Protein Interaction	78
5.2.1	Absorbance Studies	80
5.2.2	Fluorescence Quenching and Binding Constant	81
5.2.3	Stoichiometry of Protein–Nanoclay Binding	82
5.2.4	Synchronous Fluorescence Spectra	82
5.2.5	Effect on Secondary Structure	82
5.2.6	Differential Behavior of Aspect Ratio	85
5.3	DNA–Nanoclay Interaction	86
5.3.1	UV-Vis Spectrometry	87
5.3.2	Solution Viscosity	87
5.3.3	Surface Tension	88
5.3.4	Effect on Secondary Structure	89
5.3.5	FTIR Spectroscopy	90
5.4	Size-Dependent Effect on Enzymatic Activity	92
5.4.1	Circular Dichroism	92
5.4.2	Effect on Enzymatic Activity	93
5.4.3	Phenomenology of Differential Binding	94
5.5	Applications to Biology	95
	References	96
	<b>Part II Bottom-Up Assembly of Inorganic Nanoparticles</b>	<b>99</b>
<b>6</b>	<b>Metal Nanoparticles</b>	<b>101</b>
6.1	Gold Nanoparticles	103
6.1.1	Pulsed Laser Ablation Method	103
6.1.2	Chemical Reduction	103
6.1.3	Green Chemistry	104
6.1.4	Ligand-Free Synthesis	104
6.2	Silver Nanoparticles	104
6.2.1	Reduction Methods	106
6.2.2	Water-Soluble	107

6.2.3	Chitosan-Mediated Synthesis	107
6.2.4	Synthesis Using Tea Extract	107
6.2.5	Hydrophilic and Hydrophobic NPs	108
6.2.6	Laser Ablation Synthesis	108
6.3	Palladium Nanoparticles	109
6.3.1	Impregnation Method	109
6.3.2	Pluronic-Based Synthesis	110
6.3.3	Polyol-Based Synthesis	110
6.3.4	Thermal Decomposition	111
6.3.5	Reverse Micelle	111
6.4	Platinum Nanoparticles	112
6.4.1	Synthesis Using Thiol-Functionalized Ionic Liquid (TFIL)	112
6.4.2	Polyol-Based Synthesis	113
6.4.3	Colloid Method	114
6.4.4	Reverse Micellar Synthesis	114
6.4.5	Chemical Reduction	114
6.4.6	Solvothermal Synthesis	115
6.5	Samarium Nanoparticles	115
6.5.1	Bioreduction Synthesis	115
6.6	Copper Nanoparticles	117
6.6.1	Chemical Reduction	117
6.6.2	Polyol Method	117
6.6.3	Thermal Decomposition and Sonochemical Synthesis	118
6.6.4	Reduction by Plant Extracts	119
6.6.5	One-Pot Synthesis	119
6.7	Cobalt Nanoparticles	121
6.7.1	Chemical Reduction	121
6.7.2	Polyol-Based	121
6.7.3	Thermal Decomposition	122
6.7.4	Foam-Based Synthesis	122
6.7.5	Laser Ablation Method	123
6.8	Nickel Nanoparticles	124
6.8.1	Chemical Reduction	124
6.8.2	Polyol-Based Reduction	126
6.8.3	Microemulsion Method	126
6.8.4	Laser Ablation	127
6.9	Bismuth Nanoparticles	128
6.9.1	Thermal Decomposition	128
6.9.2	Chemical Reduction	129
6.9.3	Polyol Method	129
6.9.4	Solvothermal Method	130
6.9.5	One-Pot Synthesis	130
6.10	Aluminum Nanoparticles	130
6.10.1	Catalytic Decomposition	130
6.10.2	Thermal Decomposition	132
6.10.3	Templated Synthesis	132
6.11	Lead Nanoparticles	132

6.11.1	Thermolysis in Organic Solvent	132
6.11.2	Hot Injection Method	133
	References	135
<b>7</b>	<b>Metal Oxide Nanoparticles</b>	<b>145</b>
7.1	Alumina Nanoparticles	145
7.1.1	Sol–Gel Synthesis	145
7.1.2	Template Method	146
7.1.3	Precipitation Method	147
7.2	Antimony Oxide	148
7.2.1	Chemical Synthesis	149
7.2.2	Microemulsion Method	149
7.2.3	Chemical Reduction	151
7.2.4	Hydrothermal Method	151
7.2.5	Biosynthesis	151
7.3	Cobalt Oxide Nanoparticles	153
7.3.1	Thermal Decomposition	153
7.3.2	Microemulsion Method	154
7.3.3	Facile Method	154
7.3.4	Microwave Synthesis	155
7.3.5	Plant Extract Method	155
7.4	Copper Oxide Nanoparticles	156
7.4.1	Microemulsion Method	157
7.4.2	Chemical Reduction Method	157
7.4.3	Supramolecular Method	158
7.4.4	Hydrothermal Decomposition	159
7.4.5	Plant Extract Method	159
7.5	Cerium Oxide Nanoparticles	159
7.5.1	Precipitation Method	159
7.5.2	Thermal Decomposition Method	161
7.5.3	Hydrothermal and Hydrolysis Method	161
7.5.4	Microemulsion Method	161
7.5.5	Plant Extract Method	162
7.6	Indium Oxide Nanoparticles	163
7.6.1	Coprecipitation Method	164
7.6.2	Laser Ablation Method	164
7.6.3	Microemulsion Method	164
7.6.4	Hydrothermal Method	165
7.7	Iron Oxide Nanoparticles	166
7.7.1	Aqueous Method	167
7.7.2	Thermal Decomposition	168
7.7.3	Laser Pyrolysis	169
7.7.4	Coprecipitation	170
7.7.5	Sonochemical Method	170
7.7.6	Microwave Synthesis	171
7.8	Lanthanum Oxide Nanoparticles	171
7.8.1	Hydrothermal Method	172

7.8.2	Thermolysis	172
7.8.3	Sonochemical Method	172
7.9	Magnesium Oxide Nanoparticles	173
7.9.1	Precipitation Method	174
7.9.2	Sol–Gel Method	175
7.9.3	Hydrothermal Synthesis	175
7.9.4	Thermal Decomposition	175
7.9.5	Microemulsion Method	176
7.10	Neodymium Oxide Nanoparticles	177
7.10.1	Solventless Method	178
7.10.2	Microwave-Assisted	179
7.10.3	Solution Coprecipitation Method	179
7.10.4	Microemulsion Method	179
7.11	Nickel Oxide Nanoparticles	180
7.11.1	Thermal Decomposition	181
7.11.2	Sol–Gel Method	182
7.11.3	Alkoxide-Based Method	182
7.11.4	Heat Treatment	183
7.12	Samarium Oxide Nanoparticles	184
7.12.1	Thermal Decomposition	185
7.12.2	Hydrothermal Method	186
7.12.3	Hydrolysis	186
7.12.4	Microwave Radiation	186
7.12.5	Microemulsion Method	187
7.13	Silica Nanoparticles	188
7.13.1	Stöber Method	188
7.13.2	Sol–Gel Synthesis	190
7.13.3	Microemulsion Method	190
7.13.4	Hydrothermal Method	192
7.13.5	Ultrasonication	192
7.14	Titanium Dioxide Nanoparticles	194
7.14.1	Hydrothermal Method	194
7.14.2	Sol–Gel Method	195
7.14.3	Microemulsion Method	196
7.14.4	One-Pot Synthesis	197
7.14.5	Biosynthesis	197
7.15	Tin Oxide Nanoparticles	200
7.15.1	Hydrothermal Method	200
7.15.2	Templated Synthesis	201
7.15.3	Sol–Gel Method	202
7.15.4	Precipitation Method	203
7.16	Zinc Oxide Nanoparticles	204
7.16.1	Pulse Laser Ablation Method	204
7.16.2	Precipitation Method	204
7.16.3	Sol–Gel Method	206
7.16.4	Wet Chemical Method	206
7.16.5	Plant Extract Method	207

7.17	Zirconium Nanoparticles	211
7.17.1	Sol–Gel Method	212
7.17.2	Hydrothermal Method	212
7.17.3	Laser Ablation Method	213
7.17.4	Biological Method	213
	References	215
<b>8</b>	<b>Metal Sulfide Nanoparticles</b>	<b>227</b>
8.1	Antimony Sulfide	227
8.1.1	Solvothermal Method	227
8.1.2	Hydrothermal Method	228
8.1.3	Laser Ablation	228
8.2	Bismuth Sulfide	229
8.2.1	Sonochemical Method	229
8.2.2	Solvothermal Method	230
8.2.3	Template Synthesis	230
8.2.4	Protein-Mediated	231
8.3	Cadmium Sulfide	231
8.3.1	Chemical Synthesis	231
8.3.2	Electrochemical Method	232
8.3.3	Hot Injection Method	233
8.3.4	Thermal Decomposition Method	233
8.3.5	Green Synthesis	234
8.4	Copper sulfide	235
8.4.1	Thermal Decomposition	236
8.4.2	Chemical Synthesis	236
8.4.3	Green Synthesis	237
8.4.4	Other Methods	237
8.5	Lead Sulfide	237
8.5.1	Facile Approach	238
8.5.2	Single-Step Synthesis	238
8.5.3	Other Methods	239
8.6	Manganese Sulfide	240
8.6.1	Single-Step Method	240
8.6.2	Thermal Decomposition	241
8.6.3	Hydrothermal Method	241
8.6.4	Thermolysis Method	242
8.7	Nickel Sulfide	242
8.7.1	Thermolysis Method	243
8.7.2	Solvothermal Method	243
8.7.3	Gamma Irradiation	243
8.7.4	Chemical Synthesis	244
8.8	Silver Sulfide	245
8.8.1	Single-Source Precursor	245
8.8.2	Single-Step Method	246
8.8.3	Green Synthesis	246
8.9	Tin Sulfide	247

- 8.9.1 Facile Synthesis 247
- 8.9.2 Solvothermal Synthesis 248
- 8.9.3 Laser Ablation 248
- 8.9.4 Hydrothermal Synthesis 249
- 8.10 Zinc Sulfide 250
- 8.10.1 Ambient condition and Single Precursor 250
- 8.10.2 Chemical Method 251
- 8.10.3 Facile Synthesis 251
- 8.10.4 Single-Precursor Thermolysis 252
- References 253

### Part III Self-Assembly of Organic Nanoparticles 259

- 9 Polymeric Nanoparticles 261**
- 9.1 Polyethylene Glycol (PEG) 261
- 9.2 Polylactic Acid (PLA) Nanoparticles 263
- 9.2.1 One-Pot Synthesis 264
- 9.2.2 Solvent Displacement Synthesis 265
- 9.2.3 Plant Extract Synthesis 265
- 9.2.4 Electrospraying 266
- 9.3 PNIPAM Nanoparticles 267
- 9.3.1 Free Radical Polymerization 267
- 9.3.2 One-Pot Synthesis 268
- 9.3.3 Poly( $\beta$ -amino ester) Nanoparticles 268
- 9.4 Poly(D,L-lactide-co-glycolic acid) (PLGA) Nanoparticles 269
- 9.4.1 Emulsion Solvent 270
- 9.4.2 Nanoprecipitation 270
- 9.4.3 Microfluidic Nanoprecipitation 270
- 9.5 Poly(methyl methacrylate) (PMMA) Nanoparticles 271
- 9.5.1 Microemulsion Polymerization 271
- 9.5.2 Surfactant-Free Emulsion Polymerization (SFEP) 272
- 9.5.3 "Click" Chemistry 272
- 9.5.4 Free Radical Miniemulsion Polymerization 273
- 9.6 Polyurethane Nanoparticles 273
- 9.6.1 Miniemulsion Synthesis 274
- 9.6.2 Oligodiol-Polyurethane Synthesis 275
- 9.6.3 Interfacial Polycondensation 276
- 9.7 Polystyrene Nanoparticles 276
- 9.7.1 Emulsion Polymerization 276
- 9.7.2 Surfactant-Free Synthesis 277
- 9.7.3 Free Radical Emulsion Polymerization 277
- 9.7.4 Miniemulsion Copolymerization 278
- 9.8 Ethyl Cellulose Nanoparticles 278
- 9.8.1 Phase Inversion Synthesis 278
- 9.8.2 Nanoprecipitation Synthesis 280
- 9.8.3 Solvent Diffusion Method 280

9.9	Polyacrylamide Nanoparticles	281
9.9.1	Free Radical Microemulsion Polymerization	281
9.9.2	Inverse Microemulsion Polymerization	282
9.9.3	Inverse Heterophase Polymerization	283
9.10	Poly(vinylpyrrolidone) Nanoparticles	283
9.10.1	Reverse Micellar Synthesis	283
9.11	Poly( $\epsilon$ -caprolactone) Nanoparticles	284
9.11.1	Solvent Displacement	284
9.11.2	Microemulsion Method	284
9.12	Poly(vinyl alcohol) Nanoparticles	285
9.12.1	Microemulsion and Freezing/Thawing Cycle	285
9.12.2	Nanoprecipitation	285
	References	287
<b>10</b>	<b>Biopolymeric Nanoparticles</b>	<b>293</b>
10.1	Albumin Nanoparticles	294
10.1.1	Human Serum Albumin (HSA) Nanoparticles	295
10.2	Alginate–BSA Nanoparticles	296
10.3	BSA–Acacia Nanoparticles	297
10.4	Chitosan Nanoparticles	298
10.5	Triphosphate–Chitosan Nanoparticles	299
10.6	siRNA–Chitosan Nanoparticles	300
10.7	DNA–Chitosan Nanoparticles	300
10.8	Gelatin Nano- and Microparticles	301
10.8.1	Preparation of Nanoparticles	304
10.8.2	Preparation of Microparticles	304
10.9	Heparin Nanoparticles	309
10.10	Heparin–Chitosan Nanoparticles	310
10.11	Heparin–Deoxycholic Acid Nanoparticles	311
10.12	Heparin–Poly( $\beta$ -benzyl-L-aspartate) Nanoparticles	311
10.13	Hyaluronic Acid Nanoparticles	312
10.14	Nucleic Acid Nanoparticles	313
10.15	Pectin Nanoparticles	315
10.16	Pectin–Cisplatin Nanoconjugate	316
10.17	Silk Protein Nanoparticles	317
10.18	Zein Nanoparticles	318
	References	320
