

## Index

### **a**

adhesion one 12  
 adhesion torque 11–13, 15, 105  
 Adriamycin 105  
 adsorption, modularizing strategies for 238–239  
 agarose microspheres  
     preformed polymer system 83  
     uniform microspheres for chromatographic media 268–296  
 agarose particles 139–141  
 alginate microspheres 80, 89–93, 141–142, 185  
 alginate particles 141–142, 185  
 $\alpha$ -L-Guluronate (G) 141  
 amino and hydroxyl groups 163  
 anionic emulsifier 3, 121  
 anticancer drugs  
     novel biomimetic delivery strategies 222–224  
     physical and chemical particle properties  
         flexibility 210–211  
         morphology 207–210  
         size 203  
         surface charge 203–206  
     targeting tumor tissues  
         externally-activated targeting 217–222  
         ligand/receptor-induced targeting 211–212

tumor microenvironment sensitive

targeting 212–217

antigen-presenting cells (APCs) 137, 231–232, 234, 237–241, 244–246, 248, 251–255

ARCoV 237

Arlacel 83 109–110, 112, 166, 168–169

asialoglycoprotein (ASGP) receptors 211

### **b**

batch-to-batch stability 232, 257, 324  
 $\beta$ -D-Mannuronate (M) 141  
 benzoyl peroxide (BPO) 28, 30, 33, 35, 46, 48, 132, 149  
 biochemical engineering  
     cell culture carriers 312–315  
     super-porous microspheres for vaccine separation  
     preparation methods for 297–303  
     significance of 297  
     uniform microspheres and  
         super-porous microspheres in 268  
     uniform microspheres for chromatographic media  
         agarose microspheres 270–276  
         Konjac Glucomannan (KGM) 276–280  
         particle size 268–270  
         PGMA microspheres 290–292  
         PHEMA microspheres 292–293  
         PST microspheres 280–290

- biochemical engineering (*contd.*)  
     silica microspheres 293–296
- bio-degradable poly (lactide)  
     microspheres 41–42
- biomimetic chitosan microsphere with  
     cell membrane 157
- biomolecules separation  
     excellent flow hydrodynamics 306–307  
     virus-like particles (VLPs) separation 308–312
- bioseparation 30, 32, 43, 140, 158, 269,  
     273–274, 276, 280
- bioseparation engineering 267
- biotechnology 73, 77, 267–269, 297, 316
- Bovine serum albumin (BSA)  
     fluorescein isothiocyanate (FITC-BSA) 83  
     macromolecule 106
- C**
- CaCl<sub>2</sub> miniemulsions 141, 185
- calcium alginate microspheres 80,  
     142
- cationic emulsifiers 3
- cell culture engineering 267
- cellulose microspheres 93–94
- cGAS-STING activators 232
- chitosan gel particles 138–139
- chitosan microspheres 63, 77–83  
     encapsulating water-insoluble drugs 154–155  
     oral administration via O/W/O 153–154  
     chitosan solid particles 136–137  
     coarse droplets (premixed emulsion) 129  
     composite microspheres  
         cross-linking agent 124–125  
         stabilizer in outer aqueous phase 123–124  
         water-soluble inhibitor 123  
     composition of polymers 113–114, 126  
     computational fluid dynamics (CFD) 16–19
- continuous phase flow on emulsion uniformity 11–13
- core–shell–shell morphology (CSP1P2P3) 55
- cosurfactant on morphology of composite microspheres 52–56
- cross flow drag force 6
- cross-flow membrane emulsification 1  
     computational fluid dynamics 16–19  
     force balance model 6–8  
     Lattice Boltzmann method (LBM) 20–21  
     mechanism of droplet formation 2–5  
     surface evolver tool 19–20  
     torques balance model 8–16
- cross-flow membrane emulsification (CME)  
     droplet formation 2–5, 323  
     force balance model 6–8  
     Torque balance model 8–9
- cross-flow membrane emulsification equipment 324–326
- D**
- Darcy law 9
- denaturation 175–178, 183, 193, 304
- detachment one 12
- diethylenetriamine (DEAE) 40
- diphenylmethane-4,4'-bisallylnagaiimide (BANI-M) 40, 41
- direct membrane emulsification 1, 35,  
     61, 69, 70, 73, 105
- direct membrane emulsification technique (MET) 8, 107–109,  
     118, 122, 129, 184, 323
- dispersed-phase on emulsion uniformity 14–15
- dispersed phase parameters 9–10
- droplet size distribution 12–17, 69, 105,  
     118
- droplets spontaneous detachments 4
- drug delivery system (DDS) 43, 73, 95,  
     112, 126, 129, 164, 167, 195, 202,  
     212, 224

- drug-loaded particles from O/W emulsion 132  
 polydopamine microcapsules 135–136  
 via adsorption 133  
 via encapsulation 133–135  
 drug-loading amount 116–117, 126  
 dynamic droplet volume 10  
 dynamic lift force 6, 7
- e**  
 EGDMA 32, 33, 40, 300  
 egg-box junctions 141  
 elongative end pinching (EEP)  
 mechanism 328  
 emulsifiers or stabilizer on emulsion  
 uniformity 15–16  
 emulsifier/stabilizer on morphology of  
 microspheres 52  
 emulsion in emulsion 105  
 emulsion uniformity  
 continuous phase flow 11–13  
 dispersed-phase 14–15  
 emulsifiers or stabilizer 15–16  
 transmembrane pressure 13–14  
 enhanced immune responses 232,  
 240  
 enhanced permeability and retention  
 effect (EPR effect) 201  
 externally-activated targeting  
 magnetism-based tumor targeting  
 217–218  
 photosensitive tumor targeting  
 219–220  
 thermal-responsive targeting 220–221  
 ultrasonic-induced targeting 221–222
- f**  
 fluorescein isothiocyanate (FITC-BSA) 83  
 force balance model 6–9
- g**  
 gel microparticles (MGels) 138, 234  
 Global Cancer Statistics 2020 201  
 glucomannan microspheres 94–95  
 glutaraldehyde 78–80, 95, 97, 98,  
 182–184, 187–189, 234  
 GRT-350 62–67
- h**  
 Hagen–Poiseuille equation 9  
 high through-put membrane  
 emulsification equipment 325  
 HTCC chitosan microspheres for oral  
 administration via O/W/O  
 153–154  
 hydrophilic microspheres from W/O  
 emulsion  
 agarose particles 139–141  
 alginate particles 141–142  
 chitosan particles 136–139  
 Konjac Glucomanna particles  
 143–144  
 stimuli-responsive PNIPAM particles  
 139  
 hydrophilic polymer microspheres from  
 W/O emulsion  
 membrane emulsification  
 polyvinyl alcohol (PVA) 95  
 protein microspheres 98  
 membrane modification and  
 preparation  
 hydrophobic membrane 67–73  
 hydrophobic modification 62–67  
 preformed polymer system 77–95  
 preparation microparticles from  
 monomer system 73–77  
 hydrophobicity 55, 57, 62, 64, 67, 164,  
 206–207, 245  
 hydrophobic membrane, preparation of  
 67–73  
 hydrophobic microspheres from O/W  
 emulsion  
 drug-loaded particles 132–136  
 morphology control of microspheres  
 crosslinker 45–46  
 inert diluents 46–51  
 polylactide based particles from O/W  
 emulsion 130–131  
 preparation from monomer system

- hydrophobic microspheres from O/W emulsion (*contd.*)
