

Index

a

activated carbon 39, 40, 42, 63, 77,
85–86, 148, 181, 264, 336
adsorbent media filters (AMF) 336
adsorption 1
 and chemical stability metal and metal
 oxide nanomaterials 357, 361,
 362
 isotherms 44–45
 kinetics 45–47
 studies and characterization 40–42
advanced oxidation processes (AOPs)
 99, 146, 204
aerogels 204
 oil recovery 306–307
Ag and CuO nanoparticles 157
agriculture waste 309
air and water purification 206–211
 nanomaterials for 61–66
air filtration 115, 118–128, 330, 387
air pollution
 carbon-based nanomaterials (CNMs)
 application 335–340
 challenges 340
 structures and properties 332–335
 controlling techniques 331
 definition 329
 factors 330
air purification 205–206, 211, 331–332
alginate based adsorbents 8
alginate-based hybrid aerogels 205
aluminium oxide (Al₂O₃) nanoparticles
 282

ambient pressure drying (APD) technique
 381
4-aminophenol 209
(3-aminopropyl)triethoxysilane 210
amylopectin 6
antibiotic resistance 217
antibiotics in wastewater 223–224
antifouling property 353, 355
antimicrobial agents 246
antimicrobial nanomaterials
 chitosan and peptides 88–91
 TiO₂ NPs 92–93
 zinc oxide NPs 93
antimicrobial resistance (AR) 217

b

bacterial cellulose (BC) 312
bacterial illnesses 217
bacterial nanocellulose (BNC) 377–378
batch equilibrium and kinetic
 experiments
 adsorbent dose 43–44
 agitation time effect 43
 pH effects 42–43
bentonite based adsorbents 1
bioactive metallic nanoparticles for water
 purification
 bioactive metal oxides nanoparticles
 279–283
 carbon-based nanomaterials 283–287
 characteristics 276
 chitosan 283
 conventional methods 276

- bioactive metallic nanoparticles for water purification (*contd.*)
 - copper nanoparticles (Cu-NPs) 278–279
 - hybrid nanoparticles 287–290
 - metallic nanoparticles 277–279
 - selenium 279
 - silver nanoparticles 277–278
- biochar based nano adsorbents 2, 9–10
- biogenic nanoparticles
 - carbon nanotube (CNT)-based nanotechnologies 268
 - glutaraldehyde activated carbon nanospheres (GCN) 268
 - Mn oxide-coated carbon nanotubes (MnO₂/CNTs) 268
 - photocatalysis 267
 - surfactant concentration and fly ash nanoparticles (FANPs) 268–269
- bismuth vanadate (V) (BiVO₄) 202
- β-(1-4) linked N-acetyl-D-glucosamine 5
- Brunauer-Emmett-Teller (BET) analysis 19
- C**
- carbon-and metal-based nanostructured adsorbents 63
- carbon-based nano-adsorbents
 - activated carbon 85–86
 - carbon nanotubes 86–87
 - fullerenes 87–88
- carbon based nanocatalysts for water purification 148–150
- carbon-based nanomaterials (CNMs)
 - application 335–340
 - challenges 340
 - structures and properties 332–335
- carbon-based nanomaterials for water purification
 - carbon nanotubes (CNTs) 283–286
 - graphene-based nanomaterials 286–287
- carbon doping 152
- carbon nanotube-based sensor 338
- carbon nanotube ponytails (CNP) 149
- carbon nanotubes (CNT) 86, 148
- carbon nitride nanosheets (CNNS) 229
- cellulose
 - definition 375
 - morphology and structure of 375–376
- cellulose, a biodegradable polymer
 - cellulose based aerogels 315–325
 - cell wall composition 309–311
 - classification of
 - bacterial cellulose (BC) 312
 - cellulose fibres 315
 - cellulose nanocrystals 311–312
 - cellulose nanofibres 312–315
 - sources of cellulose 309
 - structure of 308
- cellulose based adsorbents 6
- cellulose based aerogels
 - hydrophobic modification
 - chemical vapour deposition 318–319
 - cold plasma treatment method 319–320
 - sol-gel process method 321–322
 - surface roughness and esterification 322–325
 - mechanism of oil absorption 317
 - oil absorption 316–317
 - raw natural sorbents 316
- cellulose crystallites 377
- cellulose fibres 315
- cellulose nanocrystals (CNC) 311–312, 377
- cellulose nanofiber (CNF) 312–315, 373, 376, 377
- cellulose nano whiskers (CNW) 377
- cellulosic aerogels 313
- cell wall composition 309–311
- ceramic membranes 103–104
- cetrimonium bromide (CTAB) 208
- chemical desalination 98–99
- chemically active support 241
- chemically inert support 240–241

- chemical vapour deposition 318–319
- chitin and chitosan based adsorbents
5–6
- chitosan (poliglusam) 5
- chitosan/ $\text{Al}_2\text{O}_3/\text{Fe}_3\text{O}_4$ nanocomposite
6
- chitosan and peptides 88–91
- chitosan based air filters 124
- chitosan nanoparticles 283
- chitosan-PLA blend electrospun
membranes 124–125
- chlorinated compounds 157
- chlorination method 145
- chlorine-resistant organisms 276
- clay based nZVI nanocomposites 5
- CNT and NP composite membranes
102–103
- cold plasma treatment method 319–320
- Contaminants of Emerging Concerns
(CECs) 60
- continuous-flow hydrothermal synthesis
(CFHS) 204
- conventional methods for water
remediations 275
- copper nanoparticles for water treatment
278
- covalent triazine-based frameworks
nanosheets (CTFNS) 229
- Cu^{2+} , Zn^{2+} , Hg^{2+} , Al^{3+} , and I^- in drinking
water 33–37
- cyclodextrins 80–81
- d**
- dendrimer-assisted filtration 79–80
- desalination
chemical 98–99
membrane-based desalination
94–97
thermal desalination 97–98
- diffuse reflectance spectroscopy (DRS)
18
- droplet flow-assisted heterogeneous
electro-Fenton reactor (DFEF)
system 204
- drying process 381, 382
- e**
- effective removal of phenols and dyes
265–266
- electrochemical advanced oxidation
processes (EAOPs) 204
- electro-Fenton reactor 204
- electron microscopic analysis 17
- electrospinning 353
- electrospun air filtration membranes from
biopolymers
chitosan based air filters 124–125
polysaccharide based electrospun
membranes 118–123
protein based air filtration membranes
126–128
starch based filters/membranes
123–124
- electrospun ceramic nanofibers (NFs)
209
- emerging pollutants 1
- emulsion electrospinning 119
- environmental conservation 197
- expanded graphite (EG) impregnated
290
- external fouling 353
- f**
- Fenton and photo-Fenton processes
146–148
- $\text{Fe}_3\text{O}_4/\text{SiO}_2$ nanocomposite 175
- fibrous media filter (FMF) 336
- flat-sheet polymeric composite
membranes 351
- fluoroquinolones (FQs) 224
- fossil fuels 330
- freeze-drying 382–383
- FTIR analysis 17
- fullerenes 87–88
- functionalized nano-adsorbents
cyclodextrins 80–81
dendrimer-assisted filtration 79–80
nanocatalysts and green nanoparticles
84
silica 83–84
zeolites 81–83

g

- gas separation 337
- g-C₃N₄
 - antibiotics in wastewater 223–224
 - mechanism of photo-degradation 221–223
 - metal-free material 218
 - photocatalytic antibiotic degradation
 - element doping of 225–227
 - heterojunctions 228–229
 - study of 225
 - physical characteristics 218
 - structure and preparation 219–221
 - techniques 218
- GO-Ag nanocomposites 290
- “Golden Age” of antibiotics 217
- gold nanoparticles 158
- graphene-based nanomaterials 286–287
- graphene, definition of 333
- graphene oxide (GO) 199
- green bio-based materials 78
- “Green Chemistry” approach 239
- green nanotechnology
 - antimicrobial nanomaterials
 - chitosan and peptides 88–91
 - TiO₂ NPs 92–93
 - zinc oxide NPs 93
 - carbon-based nano-adsorbents
 - activated carbon 85–86
 - carbon nanotubes 86–87
 - fullerenes 87–88
 - desalination
 - chemical 98–99
 - membrane-based desalination 94–97
 - thermal desalination 97–98
 - functionalized nano-adsorbents
 - cyclodextrins 80–81
 - dendrimer-assisted filtration 79–80
 - nanocatalysts and green nanoparticles 84
 - silica 83–84
 - zeolites 81–83

- nanomembranes
 - ceramic membranes 103–104
 - CNT and NP composite membranes 102–103
 - nanofiber membranes for water purification 104–105
- photocatalysis
 - heterogenous TiO₂ photocatalysis 99–101
 - hybrid TiO₂/nanocarbon composites 101

h

- heterogeneous photocatalysts 198
- heterogenous TiO₂ photocatalysis 99–101
- high refractive index (HRI) Nd₂O₃ nanorods (NRs) 32
- hollow carbon nitride nanospheres (HCNS/CDs) photocatalyst 229
- Holonium vandate nanocatalysts 151
- homogeneous Fenton processes 148
- Horse Radish Peroxidase 259
- horseradish peroxidase (HRP) 268
- HPEI/PES membranes 351
- hybrid nanoadsorbents 10
- hybrid nanoparticles for water purification 287
- hybrid TiO₂/nanocarbon composites 101
- hyperbranched polyamide (HBPA) 210

i

- immobilised N-doped TiO₂ 152
- inorganic nanoparticles 166
- internal fouling 353
- iron oxide (magnetite) nanocomposites 183–184
- iron oxide nanoparticles 174–176

k

- Keratinases 262, 269
- Knudsen diffusion 338

l

- laccases 261
- layered double hydroxide (LDH)-MOF nanocomposite 3
- lignin 311

m

- MagNERD 175
- malachite green (MG) degradation 200
- membrane-based desalination 94–97
- membrane-based filtration techniques 374
- membrane filtration 337, 348
- mercerization 308
- metal and metal oxide nanomaterials
 - adsorption and chemical stability 357, 361–362
 - antibacterial properties of 355–357
 - antifouling property 353–355
 - fabrication of 350–353
 - photocatalytic properties 357
 - polymer membranes 362
- metal-based nanoadsorbents 63
- metal nanoparticles 277
- metal-organic frameworks (MOFs) 2, 166, 375
 - graphene, graphene oxide (GO) and reduced graphene oxide (rGO) based nano adsorbents 3–4
 - nano adsorbent 2–3
- metal oxide based nanocatalysts 151–154
- metal oxide frameworks (MOFs) 198
- metal oxides-based nanomaterials
 - iron oxide nanoparticles 174–176
 - silver nanoparticles (Ag-NPs) 172–173
 - titanium dioxide nanoparticles (TiO₂-NPs) 176–177
 - zinc oxide nanoparticles (ZnO-NPs) 177
- metal oxides/polymer or carbon-based nanocomposites
 - iron oxide (magnetite) nanocomposites 183–184

- nZVI (nanosized zero-valent iron) nanocomposites 181–182
 - silver nanocomposites 182–183
 - titanium oxide (TiO₂) nanocomposites 185
 - zinc oxide (ZnO) nanocomposites 185
 - methyltrichlorosilane (MTCS) 318
 - MgO/biochar nanocomposites 9
 - microwave irradiated 1-octadecanol functionalized CNTs 286
 - minimal inhibitory concentration (MIC) 283
 - molecular imprinting (MI) methods 201
 - montmorillonite based adsorbents 1
 - multiwalled CNTs (MWCNT) 286
 - MXene based nano adsorbent 2
 - MXene/polymer nanocomposites 353
 - MXenes based nanoadsorbents 8–9
- n***
- Nafion-bonded glassy carbon electrode (GCE) 203
 - nanoadsorbents 332
 - biochar based 9–10
 - Brunauer–Emmett–Teller (BET) analysis 19
 - different mechanisms 14–16
 - electron microscopic analysis 17
 - FTIR analysis 17
 - graphene, graphene oxide (GO) and reduced graphene oxide (rGO) based 3–4
 - hybrid 10
 - metal organic framework (MOF) based 2–3
 - MXenes based 8–9
 - other 10
 - polysaccharides based 5–8
 - UV-diffuse reflectance spectra (DRS) analysis 18
 - X-ray diffraction (XRD) analysis 17–18
 - ZVI based 4–5
 - nanobioremediation 266, 330

- nanocatalysts and green nanoparticles 84
- nanocatalysts system 332
- nanocellulose (NC)
 - aerogels 378–379
 - bacterial nanocellulose (BNC) 377–378
 - cellulose nanocrystals (CNC) 377
 - cellulose nanofiber (CNF) 376–377
- nanocellulose based aerogels
 - ambient pressure drying (APD) technique 381–382
 - freeze-drying 382–383
 - preparation of hydrogels 379–381
 - supercritical drying (SCD) 383
- nanocellulose-based aerogels 379
- nanocomposites 178
- nanocrystalline cellulose (NCC) 377
- nano-engineering in SPCE and PCCE platforms 32
- nanofiber membranes for water purification 104–105
- nanofibers 64
- nanofiltration or reverse osmosis 243–244
- nanomaterials 57–59
 - adsorption isotherms 44–45
 - adsorption kinetics 45–47
 - for adsorption studies and characterization 40–42
 - for air and water purification 61–66
 - batch equilibrium and kinetic experiments 42–44
 - for biosensing 29–30
 - Cu²⁺, Zn²⁺, Hg²⁺, Al³⁺, and I⁻ in drinking water 33–37
 - nano-engineering in SPCE and PCCE platforms 32
 - surface plasmon-coupled and photonic crystal-coupled emission platforms 30–31
 - water pollution and relevance of biosensing 27–29
 - water purification via defluoridation 37–39
- nanomembranes 166
 - ceramic membranes 103–104
 - CNT and NP composite membranes 102–103
 - nanofiber membranes for water purification 104–105
- nanoscience
 - historical contextualization of technological development 56–57
 - nanomaterials 57–59
 - nanotechnology and its potential risk 60–61
- nanosized zeolite 177, 186
- nanosized zero-valent iron (nZVI) 168
- nanotailored materials 208
- nanotechnology 275
- nanotechnology and its potential risk 60–61
- nano zerovalent iron (nZVI) 154–155
- naproxen (NPX) degradation 229
- NC-based light weight porous material
 - air filtration 387–388
 - CO₂ separation or adsorption 389–390
 - nanocellulose-based aerogels 383–384
 - oil/water separation 385–386
 - PM and VOCs removal of 388–389
 - removal of heavy metals 385
 - removal of pharmaceutical waste 386–387
- neodymium vanadate 151
- next Industrial Revolution 330
- nitro compounds 149, 157
- nitrogen enriched rGO based nanocomposite 4
- Ni_{0.5}Zn_{0.5}Fe₂O₄ (NZF) nanoferrite 154
- noble metal nanoparticles 237
 - chemically active support 241
 - chemically inert support 240–241
- microbiological pollutants
 - antimicrobial effects 246
 - copper 245–246
 - gold 245
 - platinum 245
 - silver 246

- photocatalysis 241–242
 - removal of pollutants
 - catalytic reduction 244
 - nanofiltration or reverse osmosis 243–244
 - oxidative decomposition 244
 - physicochemical processes 243
 - reductive decomposition 244
 - water purification
 - antioxidant, antibacterial, adsorbent, and antibiofouling applications 238
 - decomposition of pesticides 238–239
 - drinking water disinfection 238
 - microorganisms 238
 - non-aqueous phase liquids (NAPLs) 260
 - non-solvent induced phase separation method 351
 - norfloxacin (NOR) 229
 - Nylon 6 138
 - Nylon 6.6 138
 - nZVI (nanosized zero-valent iron)
 - nanocomposites 5, 181–182
- O**
- octahedral palladium nanoparticles 238
 - oil absorption 316–317
 - oil skimmers 305
 - organic and inorganic chemicals (pollutants) 347
 - organic polymer-based nanomaterials 166
 - oxidative decomposition 244
 - oxidized single-walled carbon nanotubes (O-SWCNTs) 208
 - oxidoreductases 262, 275
 - ozonation method 145
- P**
- palladium nanoparticles 149
 - particulate matter (PM), definition 329
 - pectin based adsorbents 7–8
 - pectin promotes cell growth 310
 - pesticides 153
 - petroleum-based, nonbiodegradable synthetic polymers 373
 - pharmaceuticals and personal care products (PPCPs') 229
 - phase inversion method 351
 - phenyl propane 311
 - photocatalysis
 - heterogenous TiO₂ photocatalysis 99–101
 - hybrid TiO₂/nanocarbon composites 101
 - mechanism of 241–242
 - plasmonic 242–243
 - titania 242
 - photocatalytic antibiotic degradation,
 - g-C₃N₄ element doping of 225–227
 - heterojunctions 228–229
 - study of 225
 - photocatalytic oxidation (PCO) 206
 - photo-degradation by employing g-C₃N₄ 221–222
 - plant cell wall 310
 - plasmon-assisted photocatalysis 242–243
 - plasmonic photocatalysis 242
 - Pluronic P123 208
 - pollutants 166
 - poly(lactic acid), air filtration membranes 135
 - Polyaniline (PA) 375
 - poly(vinyl alcohol) based filters 129
 - poly(acrylonitrile) (PAN)-based filtration membranes 128
 - Polyethylene Terephthalate (PET) 259
 - polymeric membranes 348, 349 and nanoparticles 352
 - polymeric nanoadsorbents 63
 - polymers, electrospun nanofibers
 - membranes for air filtration 116
 - polypropylene microporous membranes 353
 - polysaccharide based electrospun membranes 118–123

- polysaccharide based nanoadsorbents
 alginate based adsorbents 8
 cellulose based adsorbents 6
 chitin and chitosan based adsorbents
 5–6
 pectin based adsorbents 7–8
 starch based adsorbents 6–7
 Poly-vinylidene fluoride (PVDF) 375
 poly(ϵ -caprolactone) (PCL)/zein/Ag
 nanoparticle (AgNP) 139
 protein based air filtration membranes
 126–128
 PVA/KGM electrospun nanofiber
 membranes 133
- r**
 reactive oxygen species (ROS) 277
- s**
 selenium nanoparticles in water
 treatment processes 279
 sericin 126
 sharp-edged nanomaterials 37
 silica 83–84
 silica aerogels 374
 silicate/polymer or carbon-based
 nanocomposites 186
 silver nanocomposites 182–183
 silver nanoparticles (Ag-NPs) 172–173
 for water treatment 277–278
 single-electron-trapped oxygen-vacancy
 (SETOV) 152
 sodium dodecyl sulfate (SDS) 286
 sodium intercalated $Ti_3C_2T_x$ -based
 nanoadsorbent 9
 solar-powered desalination systems
 79
 sol-gel processes
 aerogels 204
 air and water purification 206–211
 air purification 205–206
 $BiVO_4$ 202
 development and application of 197
 inorganic materials 202
 mesoporous silica via 201
 pesticides 201
 photocatalytic material 201
 poly(2-methylaniline)
 (P2MA)- $Ce_2(WO_4)$ 203
 polymer nanocomposite synthesis
 203
 polystyrene spheres (PS) 200
 sol-gel process method 321–322
 soyproteins 126
 spinel magnetic nanoparticles (SMNPs)
 208
 spinel nanoparticles 209
 starch based adsorbents 6–7
 starch based filters/membranes
 123–124
 starch functionalized maghemite
 nanocomposites 7
 stearic acid chloride (SAC) 322
 supercritical drying (SCD) 314, 383
 surface-enhanced Raman spectroscopy
 (SERS) 242
 surface plasmon-coupled and photonic
 crystal-coupled emission platforms
