

Index

a

acoustic actuation 2, 5, 6
 acoustic radiation force 5
 alternating magnetic field (AMF) 155, 160, 161, 187
 anisotropic magnetization 31
 arbitrary director fields 144–146, 150, 152, 166
 asymmetric Bessel beam 115–120, 134
 azobenzene derivatives 5, 141

b

biohybrid actuation 2, 7
 biohybrid materials 214–216
 blade structure 121, 122
 blazed grating (BG) 116
 bonding agent 4, 8, 12, 35, 37, 39, 40, 58, 59, 61
 bottom-up assembly 12, 18, 35, 55
 bottom-up heterogeneous assembly
 jig-assisted assembly approach 36–40
 voxel fabrication and magnetization 35–36
 buckling-encoded magnetization (BM) 47

c

carbon-based materials 74–76
 humidity-induced deformation 83–87
 light-induced expansion 76–81
 light-induced shrinkage 81–83
 carbon black particles 80
 cardiomyocytes 214, 215

cell gripper 130–132
 chemical actuation 2, 6, 7, 25, 26
 chemically responsive hydrogels 108, 109
 chemical vapor deposition (CVD) 75
 complex laser scanning strategy 121–122
 covalent adaptable networks (CAN) 155

d

deprotonation 107
 dibutyltin dilaurate (DBTDL) 157
 digital light processing (DLP) 10, 18, 216
 digital micromirror device (DMD) 2
 direct heating approach 43
 direct ink writing (DIW) 2, 10, 25, 97, 109, 216
 direct laser writing (DLW) 10, 18, 25, 43, 97, 110, 111, 143, 216
 4D printing technique 110
 dynamic holography technique 118

e

edge-bonding 35, 37, 39–41
 electrical-responsive hydrogels 108, 109
 electromagnetic coils 11, 33, 154, 175, 177, 181–195, 207

f

fabrication methods
 modular assembly 8, 12
 molding 7–10

fabrication methods (*contd.*)
 semiconductor and microelectronic techniques 11–12
 3D printing techniques 10–11
 face-bonding strategy 37
 ferrofluids droplet robots (FDRs) 173
 cargo capturing and delivering 198–200
 contacting substrate of 197, 198
 deformation of 175–198
 description of 174
 liquid pumping and mixing 201–203
 objects sorting 200, 201
 parameters of 195–197
 phase transitional metallic 206
 soft robots, liquid skin of 203–206
 splitting number of 193
 finite element analysis (FEA) 47
 4D microscale building blocks
 designing 123–126
 inverse and forward design of 128–130
 modular assembly 126–128
 fused filament fabrication (FFF) 10

g

graphene nanoplatelets (GNPs) 77

h

Halbach magnet array 162
 high-temperature vulcanising (HTV) 25
 hollow microcatheter 12–13
 humidity-induced deformation 83–87

i

intelligent electronics 15–17, 173

j

jig-assisted assembly approach 36–41
 Joule heating effect 143

k

Kresling patterns 217, 218

l

laser-induced graphene (LIG) 43, 97
 layer-by-layer assembly 75
 light actuation 2, 4–5, 109, 159, 215
 light-induced expansion 76–82, 99
 light-induced local modification 88–90, 99
 light-induced shrinkage 81–83
 liquid crystal elastomer (LCE)
 and LCNs 142
 and MREs 158
 liquid crystal networks (LCNs)
 arbitrary director fields 144–146
 and LCEs 142
 1D and 2D voxels assembly 149–152
 photopolymerization of 144
 programmed voxelated director fields 143–144
 2D director field alignment 146–147
 3D LCE structures 152, 153
 3D microstructures with uniform 146–147
 3D-to-3D shape transformation 147–149
 liquid-crystal SLM 116
 localized cancer cell treatment 132–134
 local phase modulation (LPM) 116
 lower critical solution temperature (LCST) 107

m

magnetic actuation 2–4, 16, 25, 26, 29, 30, 34, 47, 66, 132, 154, 203, 215
 magnetic dipolar force 188
 magnetic field forces 2
 magnetic fields induced
 by electromagnetic coils 181–195
 by permanent magnets 175–181
 magnetic force 4, 40, 163, 164, 175, 181–183
 magnetic microparticles (MMPs) 28, 35, 154, 155, 166
 magnetic responsive elastomers (MREs) 18, 158
 magnetoactive materials 29, 30

magnetocaloric effect 215

magneto-elastomers
 applications of 64–66
 cellular structures of 47–50
 fluidic pumping by 60–64
 solvent and magnetic-responsive of 44–47

magnetometer 29, 36

magnetothermal effect 4, 15, 155, 159–161

magnetothermal responsive polyurethane (PU) LCE (M-PULCE) 155, 156

Marangoni effect 2, 6, 76

mechanical resonance 6

metachronal wave 55, 62

microelectronic techniques 8, 11–12

microgripper 13, 14, 16, 108, 130, 131, 135

micromanipulation 16, 132, 135, 213

micropie 185–187

microrobotic systems 12

microstick 184–186

microtrain 185–187

miniature machines
 magnetic LCE-based robots 161–165
 material designs of 154–158
 multiple-stimuli responsiveness of 158–161

miniaturized soft robots
 biohybrid materials 215–216
 intelligent and autonomous 220–223
 with perception capabilities 218–220
 shape-memory materials 213–215

modular assembly 4, 8, 12, 126–128, 217

molding 7–10, 25, 34, 133

multi-material integration strategies 19, 213, 216–218

multimaterial printing technique 27

multiscale magnetic miniature robot
 actuation (M3RA) system 177

n

near-IR (NIR) light 159

non-light-induced local modification 90–95

o

1D and 2D voxels assembly 149–152

p

particle image velocimetry (PIV)
 technique 62

permanent magnets 2, 11, 33, 48, 55, 60, 63, 154, 158, 159, 163, 173, 175–179, 181, 183, 198, 207

phase-changeable polycaprolactone (PCL) 43

phase shift parameter 47

photoactive dopants 109

photochemical reactions 5

photoisomerization 5, 141

photo-responsive actuators 5

photo-responsive hydrogels 107, 109

photosensitive groups 109

photothermal effect 5, 76, 82, 109, 142, 143, 161, 163, 215

pH-responsive hydrogels 107–110, 117, 132

pH-responsive microparticle 130–132

point-by-point 4D printing 113–115

point-by-point programming
 approach 30

Poisson's ratio 35, 40, 49

polarized optical microscope (POM) 146, 154

programmed voxelated director fields 143–144

protonation 107

r

reconfigurable hydrogel micromachines
 asymmetric Bessel beam 115–120
 complex laser scanning strategy 121–122
 design and characterization of 110–113
 point-by-point 4D printing 113–115

reconfigurable soft robots
 localized cancer cell treatment 132–134

- reconfigurable soft robots (*contd.*)
 - pH-responsive microparticle and cell gripper 130–132
- remanent magnetic moment 31
- remote-control agents 154
- reprogrammable soft machines 41–43
- room-temperature vulcanizing (RTV) 25

- S**
- self-healing strategy 93, 96
- semiconductor techniques 11–12
- shape-memory materials (SMPs) 19, 213–215
- shape memory polymer (SMP) 1, 10, 15, 73, 213
- silicone elastomers
 - crosslinking and actuation of 26
 - fluidic pumping 60–64
 - magneto-elastomers 43–50
 - miniature magnetic soft machines 55–60
 - molding or casting method 25
 - multimodal and bioinspired locomotion 50–55
 - programmable magnetization profiles 28–41
 - reprogrammable soft machines 41–43
- small-scale soft machines
 - bottom-up heterogeneous assembly 34–41
 - on buckling instability-encoded magnetization 29–32
 - 3D printing of ferromagnetic materials 32–34
- soft actuators 73–76, 97–99
- soft elastomer (SE) matrix 157
- spatial light modulator (SLM) 116
- spiral phase plate (SPP) 116
- stacked graphene assembly (SGA) 78
- stereolithography (SLA) 10
- structural changes, of actuators
 - light-induced local modification 88–90
 - non-light-induced local modification 90–93
 - oriental control of elements 97–98
 - self-healing 93–97

- t**
- template-assisted approach 30
- template-assisted magnetization 28, 29, 55
- template-assisted method 44
- 3D director field 147–152, 166
- 3D LCE structures 145, 152, 153
- 3D microstructures with uniform 146–147
- 3D printing techniques 4, 7, 10, 11, 15, 17, 216
- 3D-to-3D shape transformation 18, 147–153
- thermal actuation 2, 6, 26, 152, 160
- thermo-responsive hydrogels 107–109
- thiol-Michael addition reaction 157
- transmission electron microscopy (TEM) 174
- 2D director field alignment 145–148, 151
- two-photon polymerization (TPP) 7, 35, 110, 143

- u**
- ultraviolet light 75, 159
- uniform magnetization (UM) 30, 48
- untethered soft robots
 - acoustic actuation 5–6
 - biohybrid actuation 2, 7
 - biomedical application 12, 13
 - chemical actuation 6–7
 - environmental and proprioceptive sensing 13–15
 - fabrication methods of 7–12
 - intelligent electronics 15–16
 - light actuation 4–5
 - magnetic actuation 2–4
 - micromanipulation 14, 16
 - template-assisted magnetization 28
 - thermal actuation 6

v

vibrating sample magnetometer (VSM)
36, 157
voxel fabrication and magnetization
35–36

x

X-ray fluoroscopy imaging 194, 200

y

Young's modulus 27, 28, 34, 75
