Preface *xi*

1	Overview of Ion Exchange Membranes	1
1.1	Definition and Classifications	1
1.2	Profile of IEMs	1
1.3	Preparation of IEMs	7
1.4	Applications	10
1.5	Potentials	11
	References	13
2	Fundamentals and Characterizations	21
2.1	Donnan Equilibrium	21
2.2	Membrane Potential	22
2.3	Transference Number	24
2.4	Diffusion Coefficient and Ion Permeability	25
2.5	Ion Flux and Permselectivity	26
2.6	Area Resistance	27
2.7	Concentration Polarization	29
2.8	Limiting Current Density and Current–Voltage Curves	29
2.9	Water Transport	32
2.10	Membrane Scaling and Fouling	34
2.11	Zeta Potential	35
2.12	Other Conventional Characterization	38
2.12.1	Conductivity	38
2.12.2	Ion Exchange Capacity	39
2.12.3	Water Uptake and Swelling Ratio	40
2.12.4	Mechanical Strength	40
	References	41
3	Side-chain Engineering for Ion Exchange Membrane Preparation	45
3.1	Principles of Side-chain Engineering	45
3.1.1	Inspiration of Nafion	45

3.1.2	Microphase Separation of Grafted Polymers	47
3.2	Construction of Side-chain Architecture	47
3.2.1	Design of Side-chain CEMs	47
3.2.1.1	Design of Side-chain CEMs with Similar Nafion Structures	47
3.2.1.2	Design of Side-chain CEMs with Grafted Structures	61
3.2.2	Design of Side-chain AEMs	64
3.2.2.1	Design of Side-chain AEMs with Similar Nafion Structures	64
3.2.2.2	Design of Side-chain AEMs with Grafted Structures	75
3.2.2.3	Design of Functional Groups for Side-chain AEMs	76
3.3	Construction of the Cross-linking Side Chain	81
3.4	Construction of Hyperbranched Networks	83
3.5	Construction of Dynamic Transfer Regions	84
3.6	Construction of Cation–Dipole Interactions	88
	References	92
4	Polyacylation for Ion Exchange Membrane Preparation	105
4.1	Principle of Polyacylation	108
4.2	Types of Acylation Reactions	109
4.2.1	Acylation of Alcohols	111
4.2.2	Acylation of Amines	112
4.2.3	Acylation of Enols	114
4.2.4	Acylation of Carboxylic Acids	116
4.2.5	Acylation of Ketones	116
4.2.6	Acylation of Amides	118
4.2.7	Acylation of Sulfonamides	119
4.2.8	Polyacylation of Polymers	121
4.2.9	Advantages and Limitations of Polyacylation as a Synthetic Approach	123
4.2.10	Polyacylation and Polymers	124
4.3	Perylene-based Polyimides	125
4.3.1	Traditional Route	125
4.3.2	Polyacylation Route	127
4.3.3	Synthesis of Perylene-based Polyimide-based Ion Exchange Membranes	131
4.3.4	Perylene and Polyimide-based CEMs	135
4.3.5	Perylene and Polyimide-based AEMs	138
4.4	Polyacylation of SPEK-based IEMs	140
4.4.1	Polyacylation of SPEK-based CEMs	140
4.4.2	Polyacylation of SPEK-based AEMs	144
4.5	Polyacylation/Polyacylated Crown Ether IEMs	146
4.5.1	Acylation of Crown Ether	146
4.5.2	Poly-Crown Ether-based AEM	147
4.5.3	Poly-crown Ether-based Noncharged Selective Membrane (PCENS-M)	153
4.6	Conclusion	156

4.6.1	Challenges/Opportunities for Further Development	156
4.6.2	Outlook for the Future of Polyacylation in Membrane Research	157
	References	157
5	Superacid–Catalyst Polymerization for IEMs Preparation	169
5.1	Definition and Types of Superacid	169
5.2	Principle of Superacid Catalyst	172
5.3	Superacid-catalyzed Reaction for Polymer Synthesis	175
5.4	Superacid-catalyst Polymerization for IEM Preparation	179
5.5	Others	213
	References	215
6	Microporous Polymers for IEM Preparation	219
6.1	Ion Transport Behavior in Nanospace-confined Membranes	219
6.2	Principle of Microporous Polymers	220
6.3	IEMs Derived from Microporous Polymers	225
6.3.1	Positively Charged Microporous Polymers	225
6.3.2	Negatively Charged Microporous Polymers	232
6.3.2.1	Hydrolysis of Dibenzodioxin-based Microporous Polymers	233
6.3.2.2	Amidoxime of Dibenzodioxin-based PIMs	233
6.3.2.3	Post-sulfonation of PIMs or Bottom-up Approach	234
6.4	Conclusion and Outlook	239
	References	240
7	In Situ Polymerization for IEM Preparation	245
7.1	Conventional Methods for IEM Preparation	245
7.2	Semi-interpenetrating Polymer Network	246
7.3	Pore Filling	250
7.4	Solvent-free Strategy	253
7.5	In Situ Polymerization	255
	References	256
8	Special IEMs Preparation	261
8.1	Metal–Organic Framework Membranes	261
8.1.1	Introduction	261
8.1.2	Structural Properties of MOFs	261
8.1.2.1	Structural Diversity	261
8.1.2.2	Structural Tunability	262
8.1.2.3	High Stability	264
8.1.3	Preparation of MOF Membranes	265
8.1.3.1	UiO-66-NH ₂ Membrane	266
8.1.3.2	UiO-66-SO ₃ H Membrane	268
8.1.3.3	UiO-66(Zr/Ti)-NH ₂ /Polyamide Mixed Matrix Membrane	268
8.1.3.4	PolyMOF Membrane	271
8.2	Porous Organic Cage Membranes	272

8.2.1	Introduction	272
8.2.2	Structural Properties of POCs	274
8.2.3	Preparation of POC Membranes	276
8.2.3.1	POC Membranes of Versatile Channels	276
8.2.3.2	High Ion-Permselective CC3 Membrane	281
8.3	Covalent Organic Framework Membranes	285
8.3.1	Introduction	285
8.3.2	Design Strategies of the COF Structure	286
8.3.2.1	Pore Structure Design	288
8.3.2.2	Pore Surface Engineering	288
8.3.3	Preparation of COF Membranes	292
8.3.3.1	COF Membrane with Sub-2-nm Channels	292
8.3.3.2	Cationic COF Membrane	296
8.3.3.3	Self-Standing COF Membrane	300
8.4	Electro-Nanofiltration Membranes	305
8.4.1	Introduction	305
8.4.2	The Preparation of ENMs	306
8.4.3	The Performance of ENMs	307
8.5	Conclusion and Perspective	314
	References	315
9	Applications	327
9.1	Diffusion Dialysis (DD)	327
9.1.1	The Basic Theory of Diffusion Dialysis	327
9.1.1.1	High-performance Diffusion Dialysis Membranes	328
9.1.2	Diffusion Dialysis Components	330
9.1.3	Diffusion Dialysis Application Field	331
9.1.3.1	Recovery of Waste Acid	331
9.1.3.2	Alkali Recovery	333
9.2	Reverse Electrodialysis (RED)	334
9.2.1	Basic Theory of RED	336
9.2.2	The Main Components of RED	338
9.2.2.1	Ion Exchange Membrane	339
9.2.2.2	Spacers	341
9.2.2.3	Electrode System	342
9.3	Donnan Dialysis	343
9.3.1	Basic Theory of Donnan Dialysis	344
9.3.1.1	The Parameters Affecting Donnan Dialysis	346
9.4	Electrodialysis (ED)	347
9.5	Application of ED	349
9.5.1	Desalination	349
9.5.2	Concentration	351
9.5.3	The Influencing Parameters on ED Concentration	351
9.5.3.1	Approaches to Improve the Concentration on ED	352
9.5.4	Resource Conversion	353

9.5.5	CO ₂ Capture	355
9.6	Electrodialysis with Bipolar Membranes (BMED)	356
9.6.1	The Basic Theory of Bipolar Membranes	358
9.6.2	Application of the BMED Process	360
9.6.2.1	The Production of Alkali	360
9.6.2.2	The Production of Acid	362
9.6.2.3	Production of CO ₂ Conversion	364
9.6.3	The Limitations of BMED	365
9.7	Electrodialysis Metathesis (EDM)	367
9.7.1	Application of the EDM Process	367
9.7.1.1	The Production of Ionic Liquid	367
9.7.1.2	High-Salinity Wastewater Conversion	369
9.7.1.3	The Production of Potassium Fertilizers	370
9.8	Ion-Distillation Technology	372
9.9	Fuel Cells	378
9.10	Water Electrolysis	384
9.11	Industrial Applications	386
9.11.1	Acid Recovery Using Diffusion Dialysis	386
9.11.2	Resource Recovery Using Electrodialysis	389
9.11.3	Clean Production Using Bipolar Membrane Electrodialysis	395
	References	396
	Index	413
