Preface VII

Preface to 1st Edition IX

1	Introduction 1
1.1	Nanometers, Micrometers, Millimeters 3
1.2	Moore's Law 7
1.3	Esaki's Quantum Tunneling Diode 8
1.4	Quantum Dots of Many Colors 9
1.5	GMR 100 Gb Hard Drive "Read" Heads 11
1.6	Accelerometers in your Car 13
1.7	Nanopore Filters 14
1.8	Nanoscale Elements in Traditional Technologies 14
2	Systematics of Making Things Smaller, Pre-quantum 17
2.1	Mechanical Frequencies Increase in Small Systems 17
2.2	Scaling Relations Illustrated by a Simple Harmonic Oscillator 20
2.3	Scaling Relations Illustrated by Simple Circuit Elements 21
2.4	Thermal Time Constants and Temperature Differences Decrease 22
2.5	Viscous Forces Become Dominant for Small Particles in Fluid Media 22
26	Frictional Forces can Disappear in Symmetric Molecular Scale
2.0	Therefore an Disappear in Symmetric Molecular Scale
2.0	Systems 24
3	Systems 24 What are Limits to Smallness? 27
3.1	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms,
3 3.1	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27
3 3.1 3.2	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28
3 3.1 3.2 3.2.1	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28 Linear Spring Motors 29
3 3.1 3.2 3.2.1 3.2.2	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28 Linear Spring Motors 29 Linear Engines on Tracks 30
3 3.1 3.2 3.2.1 3.2.2 3.2.3	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28 Linear Spring Motors 29 Linear Engines on Tracks 30 Rotary Motors 33
3 3.1 3.2 3.2.1 3.2.2 3.2.3 3.2.4	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28 Linear Spring Motors 29 Linear Engines on Tracks 30 Rotary Motors 33 Ion Channels, the Nanotransistors of Biology 36
3 3.1 3.2 3.2.1 3.2.2 3.2.3 3.2.4 3.3	What are Limits to Smallness? 27 Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27 Biological Examples of Nanomotors and Nanodevices 28 Linear Spring Motors 29 Linear Engines on Tracks 30 Rotary Motors 33 Ion Channels, the Nanotransistors of Biology 36 How Small can you Make it? 38
3 3.1 3.2 3.2.1 3.2.2 3.2.2 3.2.3 3.2.4 3.3 3.3.1	What are Limits to Smallness?27Particle (Quantum) Nature of Matter: Photons, Electrons, Atoms, Molecules 27Biological Examples of Nanomotors and Nanodevices 28Linear Spring Motors 29Linear Engines on Tracks 30Rotary Motors 33Ion Channels, the Nanotransistors of Biology 36How Small can you Make it? 38What are the Methods for Making Small Objects? 38

Nanophysics and Nanotechnology: An Introduction to Modern Concepts in Nanoscience. Second Edition. Edward L. Wolf

Copyright © 2006 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim ISBN: 3-527-40651-4

II Contents

- 3.3.2 How Can you See What you Want to Make? 39
- 3.3.3 How Can you Connect it to the Outside World? 41
- 3.3.4 If you Can't See it or Connect to it, Can you Make it Self-assemble and Work on its Own? *41*
- 3.3.5 Approaches to Assembly of Small Three-dimensional Objects 41
- 3.3.6 Use of DNA Strands in Guiding Self-assembly of Nanometer Size Structures 45

4 Quantum Nature of the Nanoworld 49

- 4.1 Bohr's Model of the Nuclear Atom 49
- 4.1.1 Quantization of Angular Momentum 50
- 4.1.2 Extensions of Bohr's Model 51
- 4.2 Particle-wave Nature of Light and Matter, DeBroglie Formulas $\lambda = h/p$, E = hv 52
- 4.3 Wavefunction Ψ for Electron, Probability Density $\Psi * \Psi$, Traveling and Standing Waves 53
- 4.4 Maxwell's Equations; *E* and *B* as Wavefunctions for Photons, Optical Fiber Modes 57
- 4.5 The Heisenberg Uncertainty Principle 58
- 4.6 Schrodinger Equation, Quantum States and Energies, Barrier Tunneling 59
- 4.6.1 Schrodinger Equations in one Dimension 60
- 4.6.2 The Trapped Particle in one Dimension 61
- 4.6.3 Reflection and Tunneling at a Potential Step 63
- 4.6.4 Penetration of a Barrier, Escape Time from a Well, Resonant Tunneling Diode 65
- 4.6.5 Trapped Particles in Two and Three Dimensions: Quantum Dot 66
- 4.6.6 2D Bands and Quantum Wires 69
- 4.6.7 The Simple Harmonic Oscillator 70
- 4.6.8 Schrodinger Equation in Spherical Polar Coordinates 72
- 4.7 The Hydrogen Atom, One-electron Atoms, Excitons 72
- 4.7.1 Magnetic Moments 76
- 4.7.2 Magnetization and Magnetic Susceptibility 77
- 4.7.3 Positronium and Excitons 78
- 4.8 Fermions, Bosons and Occupation Rules 79

5 Quantum Consequences for the Macroworld 81

- 5.1 Chemical Table of the Elements 81
- 5.2 Nano-symmetry, Di-atoms, and Ferromagnets 82
- 5.2.1 Indistinguishable Particles, and their Exchange 82
- 5.2.2 The Hydrogen Molecule, Di-hydrogen: the Covalent Bond 84
- 5.3 More Purely Nanophysical Forces: van der Waals, Casimir, and Hydrogen Bonding 86
- 5.3.1 The Polar and van der Waals Fluctuation Forces 87
- 5.3.2 The Casimir Force 90

XII

5.3.3	The Hydrogen Bond 94
5.4	Metals as Boxes of Free Electrons: Fermi Level, DOS,
	Dimensionality 95
5.4.1	Electronic Conduction, Resistivity, Mean Free Path, Hall Effect,
	Magnetoresistance 98
5.5	Periodic Structures (e.g. Si, GaAs, InSb, Cu): Kronig-Penney Model for
	Electron Bands and Gaps 100
5.6	Electron Bands and Conduction in Semiconductors and Insulators;
	Localization vs. Delocalization 105
5.7	Hydrogenic Donors and Acceptors 109
5.7.1	Carrier Concentrations in Semiconductors, Metallic Doping 110
5.7.2	PN Junction, Electrical Diode $I(V)$ Characteristic, Injection Laser 114
5.8	More about Ferromagnetism, the Nanophysical Basis of Disk
	Memory 119
5.9	Surfaces are Different; Schottky Barrier Thickness
	$W = \left[2\varepsilon\varepsilon_{o}V_{\rm B}/eN_{\rm D}\right]^{1/2} 122$
5.10	Ferroelectrics, Piezoelectrics and Pyroelectrics: Recent Applications to
	Advancing Nanotechnology 123
	5 67
6	Self-assembled Nanostructures in Nature and Industry 133
6.1	Carbon Atom ${}^{12}_{6}$ C 1s ² 2p ⁴ (0.07 nm) 134
6.2	Methane CH_4 , Ethane C_2H_6 , and Octane C_8H_{18} 135
6.3	Ethylene C_2H_4 , Benzene C_6H_6 , and Acetylene C_2H_2 136
6.4	C ₆₀ Buckyball (~0.5 nm) 136
6.5	C_{∞} Nanotube (~0.5 nm) 137
6.5.1	Si Nanowire (~5 nm) 139
6.6	InAs Quantum Dot (~5 nm) 140
6.7	AgBr Nanocrystal $(0.1-2 \mu m)$ 142
6.8	Fe_3O_4 Magnetite and Fe_3S_4 Greigite Nanoparticles in Magnetotactic
	Bacteria 143
6.9	Self-assembled Monolayers on Au and Other Smooth Surfaces 144
	,
7	Physics-based Experimental Approaches to Nanofabrication
	and Nanotechnology 147
7.1	Silicon Technology: the INTEL-IBM Approach to Nanotechnology 148
7.1.1	Patterning, Masks, and Photolithography 148
7.1.2	Etching Silicon 149
7.1.3	Defining Highly Conducting Electrode Regions 150
7.1.4	Methods of Deposition of Metal and Insulating Films 150
7.2	Lateral Resolution (Linewidths) Limited by Wavelength of Light,
	now 65 nm 152
7.2.1	Optical and X-ray Lithography 152
7.2.2	Electron-beam Lithography 153
7.3	Sacrificial Layers, Suspended Bridges, Single-electron Transistors 153

7.4 What is the Future of Silicon Computer Technology? *155*

Contents

7.5 Heat Dissipation and the RSFO Technology 156 7.6 Scanning Probe (Machine) Methods: One Atom at a Time 160 7.7 Scanning Tunneling Microscope (STM) as Prototype Molecular Assembler 162 7.7.1 Moving Au Atoms, Making Surface Molecules 162 7.7.2 Assembling Organic Molecules with an STM 165 7.8 Atomic Force Microscope (AFM) Arrays 166 7.8.1 Cantilever Arrays by Photolithography 166 7.8.2 Nanofabrication with an AFM 167 7.8.3 Imaging a Single Electron Spin by a Magnetic-resonance AFM 168 7.9 Fundamental Questions: Rates, Accuracy and More 170 8 Quantum Technologies Based on Magnetism, Electron and Nuclear Spin, and Superconductivity 173 8.1 The Stern–Gerlach Experiment: Observation of Spin 1/2 Angular Momentum of the Electron 176 8.2 Two Nuclear Spin Effects: MRI (Magnetic Resonance Imaging) and the "21.1 cm Line" 177 8.3 Electron Spin ¹/₂ as a Qubit for a Quantum Computer: Quantum Superposition, Coherence 180 8.4 Hard and Soft Ferromagnets 183 8.5 The Origins of GMR (Giant Magnetoresistance): Spin-dependent Scattering of Electrons 184 8.6 The GMR Spin Valve, a Nanophysical Magnetoresistance Sensor 186 The Tunnel Valve, a Better (TMR) Nanophysical Magnetic Field 8.7 Sensor 188 Magnetic Random Access Memory (MRAM) 8.8 190 8.8.1 Magnetic Tunnel Junction MRAM Arrays 190 Hybrid Ferromagnet-Semiconductor Nonvolatile Hall Effect Gate 8.8.2 Devices 191 8.9 Spin Injection: the Johnson-Silsbee Effect 192 8.9.1 Apparent Spin Injection from a Ferromagnet into a Carbon Nanotube 195 8.10 Magnetic Logic Devices: a Majority Universal Logic Gate 196 8.11 Superconductors and the Superconducting (Magnetic) Flux Quantum 198 8.12 Josephson Effect and the Superconducting Quantum Interference Detector (SQUID) 200 Superconducting (RSFQ) Logic/Memory Computer Elements 8.13 203 9 Silicon Nanoelectronics and Beyond 207 9.1 Electron Interference Devices with Coherent Electrons 208 9.1.1 Ballistic Electron Transport in Stubbed Quantum Waveguides: Experiment and Theory 210 Well-defined Quantum Interference Effects in Carbon Nanotubes 212 9.1.2

- 9.2 Carbon Nanotube Sensors and Dense Nonvolatile Random Access Memories 214
- 9.2.1 A Carbon Nanotube Sensor of Polar Molecules, Making Use of the Inherently Large Electric Fields 214
- 9.2.2 Carbon Nanotube Cross-bar Arrays for Ultra-dense Ultra-fast Nonvolatile Random Access Memory 216
- 9.3 Resonant Tunneling Diodes, Tunneling Hot Electron Transistors 220
- 9.4 Double-well Potential Charge Qubits 222
- 9.4.1 Silicon-based Quantum Computer Qubits 225
- 9.5 Single Electron Transistors 226
- 9.5.1 The Radio-frequency Single Electron Transistor (RFSET), a Useful Proven Research Tool 229
- 9.5.2 Readout of the Charge Qubit, with Sub-electron Charge Resolution 229
- 9.5.3 A Comparison of SET and RTD (Resonant Tunneling Diode) Behaviors 231
- 9.6 Experimental Approaches to the Double-well Charge Qubit 232
- 9.6.1 Coupling of Two Charge Qubits in a Solid State (Superconducting) Context 237
- 9.7 Ion Trap on a GaAs Chip, Pointing to a New Qubit 238
- 9.8 Single Molecules as Active Elements in Electronic Circuits 240
- 9.9 Hybrid Nanoelectronics Combining Si CMOS and Molecular Electronics: CMOL 243

10 Looking into the Future 247

- 10.1 Drexler's Mechanical (Molecular) Axle and Bearing 247
- 10.1.1 Smalley's Refutation of Machine Assembly 248
- 10.1.2 Van der Waals Forces for Frictionless Bearings? 250
- 10.2 The Concept of the Molecular Assembler is Flawed 250
- 10.3 Could Molecular Machines Revolutionize Technology or even Selfreplicate to Threaten Terrestrial Life? 252
- 10.4 What about Genetic Engineering and Robotics? 253
- 10.5 Possible Social and Ethical Implications of Biotechnology and Synthetic Biology 255
- 10.6 Is there a Posthuman Future as Envisioned by Fukuyama? 257

Glossary of Abbreviations 261

Exercises 265

Some Useful Constants 275
