Contents

Preface *XI*

Part I Basic Mathematical Description *1*

1 Fundamental Concepts *3*
1.1 Wiener Process, Adapted Processes and Quadratic Variation *3*
1.2 The Space of Square Integrable Random Variables *8*
1.3 The Ito Integral and the Ito Formula *15*
1.4 The Kolmogorov Differential Equation and the Fokker–Planck Equation *23*
1.5 Special Diffusion Processes *27*
1.6 Exercises *29*

2 Multidimensional Approach *31*
2.1 Bounded Multidimensional Region *31*
2.2 From Chapman–Kolmogorov Equation to Fokker–Planck Description *33*
2.2.1 The Backward Fokker–Planck Equation *35*
2.2.2 Boundary Singularities *37*
2.2.3 The Forward Fokker–Planck Equation *40*
2.2.4 Boundary Relations *43*
2.3 Different Types of Boundaries *44*
2.4 Equivalent Lattice Representation of Random Walks Near the Boundary *45*
2.4.1 Diffusion Tensor Representations *46*
2.4.2 Equivalent Lattice Random Walks *54*
2.4.3 Properties of the Boundary Layer *56*
2.5 Expression for Boundary Singularities *58*

Physics of Stochastic Processes: How Randomness Acts in Time
Reinhard Mahnke, Jevgenijs Kaupužs and Ihor Lubashevsky
Copyright © 2009 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ISBN: 978-3-527-40840-5

2.6 Derivation of Singular Boundary Scaling Properties *61*
2.6.1 Moments of the Walker Distribution and the Generating Function *61*
2.6.2 Master Equation for Lattice Random Walks and its General Solution *62*
2.6.3 Limit of Multiple-Step Random Walks on Small Time Scales *65*
2.6.4 Continuum Limit and a Boundary Model *68*
2.7 Boundary Condition for the Backward Fokker–Planck Equation *69*
2.8 Boundary Condition for the Forward Fokker–Planck Equation *71*
2.9 Concluding Remarks *72*
2.10 Exercises *73*

Part II Physics of Stochastic Processes *75*

3 The Master Equation *77*
3.1 Markovian Stochastic Processes *77*
3.2 The Master Equation *82*
3.3 One-Step Processes in Finite Systems *85*
3.4 The First-Passage Time Problem *88*
3.5 The Poisson Process in Closed and Open Systems *92*
3.6 The Two-Level System *99*
3.7 The Three-Level System *105*
3.8 Exercises *114*

4 The Fokker–Planck Equation *117*
4.1 General Fokker–Planck Equations *117*
4.2 Bounded Drift–Diffusion in One Dimension *119*
4.3 The Escape Problem and its Solution *123*
4.4 Derivation of the Fokker–Planck Equation *127*
4.5 Fokker–Planck Dynamics in Finite State Space *128*
4.6 Fokker–Planck Dynamics with Coordinate-Dependent Diffusion Coefficient *133*
4.7 Alternative Method of Solving the Fokker–Planck Equation *140*
4.8 Exercises *142*

5 The Langevin Equation *145*
5.1 A System of Many Brownian Particles *145*
5.2 A Traditional View of the Langevin Equation *151*
5.3 Additive White Noise *152*
5.4 Spectral Analysis *157*
5.5 Brownian Motion in Three-Dimensional Velocity Space *160*

5.6 Stochastic Differential Equations *166*
5.7 The Standard Wiener Process *168*
5.8 Arithmetic Brownian Motion *173*
5.9 Geometric Brownian Motion *173*
5.10 Exercises *176*

Part III Applications *179*

6 One-Dimensional Diffusion *181*
6.1 Random Walk on a Line and Diffusion: Main Results *181*
6.2 A Drunken Sailor as Random Walker *184*
6.3 Diffusion with Natural Boundaries *186*
6.4 Diffusion in a Finite Interval with Mixed Boundaries *193*
6.5 The Mirror Method and Time Lag *200*
6.6 Maximum Value Distribution *205*
6.7 Summary of Results for Diffusion in a Finite Interval *208*
6.7.1 Reflected Diffusion *208*
6.7.2 Diffusion in a Semi-Open System *209*
6.7.3 Diffusion in an Open System *210*
6.8 Exercises *211*

7 Bounded Drift–Diffusion Motion *213*
7.1 Drift–Diffusion Equation with Natural Boundaries *213*
7.2 Drift–Diffusion Problem with Absorbing and Reflecting Boundaries *215*
7.3 Dimensionless Drift–Diffusion Equation *216*
7.4 Solution in Terms of Orthogonal Eigenfunctions *217*
7.5 First-Passage Time Probability Density *226*
7.6 Cumulative Breakdown Probability *228*
7.7 The Limiting Case for Large Positive Values of the Control Parameter *229*
7.8 A Brief Survey of the Exact Solution *232*
7.8.1 Probability Density *233*
7.8.2 Outflow Probability Density *234*
7.8.3 First Moment of the Outflow Probability Density *234*
7.8.4 Second Moment of the Outflow Probability Density *235*
7.8.5 Outflow Probability *236*
7.9 Relationship to the Sturm–Liouville Theory *238*
7.10 Alternative Method by the Backward Fokker–Planck Equation *240*
7.11 Roots of the Transcendental Equation *249*
7.12 Exercises *251*

8 The Ornstein–Uhlenbeck Process *253*
8.1 Definitions and Properties *253*
8.2 The Ornstein–Uhlenbeck Process and its Solution *254*
8.3 The Ornstein–Uhlenbeck Process with Linear Potential *261*
8.4 The Exponential Ornstein–Uhlenbeck Process *266*
8.5 Outlook on Econophysics *268*
8.6 Exercises *272*

9 Nucleation in Supersaturated Vapors *275*
9.1 Dynamics of First-Order Phase Transitions in Finite Systems *275*
9.2 Condensation of Supersaturated Vapor *277*
9.3 The General Multi-Droplet Scenario *286*
9.4 Detailed Balance and Free Energy *290*
9.5 Relaxation to the Free Energy Minimum *294*
9.6 Chemical Potentials *295*
9.7 Exercises *296*

10 Vehicular Traffic *299*
10.1 The Car-Following Theory *299*
10.2 The Optimal Velocity Model and its Langevin Approach *302*
10.3 Traffic Jam Formation on a Circular Road *316*
10.4 Metastability Near Phase Transitions in Traffic Flow *328*
10.5 Car Cluster Formation as First-Order Phase Transition *332*
10.6 Thermodynamics of Traffic Flow *338*
10.7 Exercises *348*

11 Noise-Induced Phase Transitions *351*
11.1 Equilibrium and Nonequilibrium Phase Transitions *351*
11.2 Types of Stochastic Differential Equations *354*
11.3 Transformation of Random Variables *358*
11.4 Forms of the Fokker–Planck Equation *360*
11.5 The Verhulst Model of Third Order *361*
11.6 The Genetic Model *364*
11.7 Noise-Induced Instability in Geometric Brownian Motion *364*
11.8 System Dynamics with Stagnation *367*
11.9 Oscillator with Dynamical Traps *369*
11.10 Dynamics with Traps in a Chain of Oscillators *372*
11.11 Self-Freezing Model for Multi-Lane Traffic *381*
11.12 Exercises *385*

12 Many-Particle Systems *387*
12.1 Hopping Models with Zero-Range Interaction *387*
12.2 The Zero-Range Model of Traffic Flow *389*
12.3 Transition Rates and Phase Separation *391*
12.4 Metastability *395*
12.5 Monte Carlo Simulations of the Hopping Model *400*
12.6 Fundamental Diagram of the Zero-Range Model *403*
12.7 Polarization Kinetics in Ferroelectrics with Fluctuations *405*
12.8 Exercises *409*

Epilog *411*
