Preface IX

1	Chemical Bonding in Solids	1
1.1	Attractive and Repulsive Forces	1
1.2	Ionic Bonding	2
1.3	Covalent Bonding	3
1.4	Metallic Bonding	5
1.5	Hydrogen Bonding	6
1.6	van der Waals Bonding	6
1.7	Discussion and Problems	7
2	Crystal Structures	9
2.1	General Description of Crystal Structures	9
2.2	Some Important Crystal Structures	11
2.2.1	Cubic Structures	11
2.2.2	Close-Packed Structures	13
2.2.3	Covalent Structures	14
2.3	Crystal Structure Determination	15
2.3.1	X-Ray Diffraction	15
2.3.1.1	Bragg Theory	15
2.3.1.2	Lattice Planes and Miller Indices	16
2.3.1.3	General Diffraction Theory	17
2.3.1.4	The Reciprocal Lattice	19
2.3.1.5	The Meaning of the Reciprocal Lattice	20
2.3.1.6	X-Ray Diffraction from Periodic Structures	22
2.3.1.7	The Ewald Construction	22
2.3.1.8	Relation Between Bragg and Laue Theory	23
2.3.2	Other Methods	24
2.3.3	Inelastic Scattering	24
2.4	Discussion and Problems	24

3	Mechanical Properties	29
3.1	Elastic Deformation	31
3.1.1	Macroscopic Picture	31
3.1.1.1	Elastic Constants	31
3.1.1.2	Poisson's Ratio	31
3.1.1.3	Relation Between Elastic Constants	33
3.1.2	Microscopic Picture	33
3.2	Plastic Deformation	35
3.2.1	Estimate of the Yield Stress	35
3.2.2	Point Defects and Dislocations	37
3.2.3	The Role of Defects in Plastic Deformation	38
3.2.4	Fracture	39
3.3	Discussion and Problems	40
4	Thermal Properties of the Lattice	43
4.1	Lattice Vibrations	43
4.1.1	A Simple Harmonic Oscillator	43
4.1.2	An Infinite Chain of Atoms	44
4.1.2.1	One Atom Per Unit Cell	44
4.1.2.2	The First Brillouin Zone	46
4.1.2.3	Two Atoms Per Unit Cell	47
4.1.3	A Finite Chain of Atoms	48
4.1.4	Quantized Vibrations, Phonons	50
4.1.5	Three-Dimensional Solids	51
4.1.5.1	Generalization to Three Dimensions	51
4.1.5.2	Estimation of the Vibrational Frequencies from the Elastic Constants	53
4.2	Heat Capacity of the Lattice	54
4.2.1	Classical Theory and Experimental Results	54
4.2.2	Einstein Model	55
4.2.3	Debye Model	58
4.3	Thermal Conductivity	62
4.4	Thermal Expansion	64
4.5	Allotropic Phase Transitions and Melting	66
4.6	Discussion and Problems	68
5	Electronic Properties of Metals: Classical Approach	71
5.1	Basic Assumptions of the Drude Model	71
5.2	Results from the Drude Model	73
5.2.1	DC Electrical Conductivity	73
5.2.2	Hall Effect	75
5.2.3	Optical Reflectivity of Metals	76
5.2.4	The Wiedemann–Franz Law	79
5.3	Shortcomings of the Drude Model	80
5.4	Discussion and Problems	81

6	Electronic Properties of Metals: Quantum Mechanical Approach	83
6.1	The Idea of Energy Bands	84
6.2	Free Electron Model	86
6.2.1	The Quantum Mechanical Eigenstates	86
6.2.2	Electronic Heat Capacity	90
6.2.3	The Wiedemann–Franz Law	92
6.2.4	Screening	92
6.3	The General Form of the Electronic States	93
6.4	Nearly Free Electron Model	96
6.5	Energy Bands in Real Solids	100
6.6	Transport Properties	104
6.7	Brief Review of Some Key Ideas	108
6.8	Discussion and Problems	109
7	Semiconductors	113
7.1	Intrinsic Semiconductors	114
7.1.1	Temperature Dependence of the Carrier Density	116
7.2	Doped Semiconductors	121
7.2.1	n and p Doping	121
7.2.2	Carrier Density	123
7.3	Conductivity of Semiconductors	125
7.4	Semiconductor Devices	126
7.4.1	The pn Junction	126
7.4.2	Transistors	130
7.4.3	Optoelectronic Devices	132
7.5	Discussion and Problems	133
8	Magnetism	137
8.1	Macroscopic Description	137
8.2	Magnetic Effects in Atoms	139
8.3	Weak Magnetism in Solids	143
8.3.1	Diamagnetism	144
8.3.1.1	Diamagnetism of the Ions	144
8.3.1.2	Diamagnetism of Free Electrons	144
8.3.2	Paramagnetism	144
8.3.2.1	Curie Paramagnetism	144
8.3.2.2	Pauli Paramagnetism	146
8.4	Magnetic Ordering	148
8.4.1	Magnetic Ordering and the Exchange Interaction	149
8.4.2	Temperature Dependence of the Ordering	152
8.4.3	Ferromagnetic Domains	154
8.4.4	Hysteresis	154
8.5	Discussion and Problems	156

9	Dielectrics	161
9.1	Macroscopic Description	161
9.2	Microscopic Polarization	163
9.3	The Local Field	165
9.4	Frequency Dependence of the Dielectric Constant	166
9.5	Other Effects	171
9.5.1	Impurities in Dielectrics	171
9.5.2	Ferroelectricity	171
9.5.3	Piezoelectricity	173
9.5.4	Dielectric Breakdown	174
9.6	Discussion and Problems	174
10	Superconductivity	177
10.1	Basic Experimental Facts	178
10.1.1	Zero Resistivity	178
10.1.2	The Meissner Effect	181
10.1.3	The Isotope Effect	183
10.2	Some Theoretical Aspects	184
10.2.1	Phenomenological Theory	184
10.2.2	Microscopic BCS Theory	186
10.3	Experimental Detection of the Gap	192
10.4	Coherence of the Superconducting State	194
10.5	Type I and Type II Superconductors	196
10.6	High-Temperature Superconductivity	198
10.7	Concluding Remarks	199
10.8	Discussion and Problems	200
11	Finite Solids and Nanostructures	203
11.1	Quantum Confinement	204
11.2	Surfaces and Interfaces	206
11.3	Magnetism on the Nanoscale	208
11.4	Discussion and Problems	209
