

## Index

### a

Action at a distance 1  
 Adiabatic approximation 23  
 All-electron potential 51  
 Angular quantum number 14  
 Antisymmetric wave function 25, 73  
 ARPACK code 103  
 Ashcroft, Neil 40  
 Atomic clusters 153  
 Atomic ionization energies 108  
 Atomic polarizability 116  
 Atomic spectra of hydrogen atom 8  
 Atomic static polarizability 122  
 Atomic term energies 111  
 Atoms in radiation fields 114  
 Average energy of a free electron gas 36  
 Azimuthal quantum number 14

### b

Balmer series 7  
 Band gap 86  
 Band theory 86  
 Basin hopping 162  
 Basis for diamond crystal 83  
 Bernal, John D. 29  
 Big bang search 162  
 Blackbody radiation 5  
 Bloch's theorem 79  
 Bloch, Felix 79  
 Bohr atom 6  
 Bohr magneton 16  
 Bohr model 6, 45  
 Bohr, Niels 6, 9, 107  
 Bond and antibonding states 128

Bonding and antibonding states 76  
 Born–Oppenheimer approximation 23, 71, 148  
 Bound states 19  
 Brownian motion 156  
 Buffer gas 166  
 Bulk modulus of a free electron gas 33

### c

$C_{60}$  molecule 203  
 Carbon buckyballs 162  
 Casida equation 139  
 Chebyshev polynomials 103  
 Classical electron radius 16  
 Classical polarizability 165  
 Cluster, definition 153  
 Clusters electronic properties 164  
 Clusters, determining structures 154  
 Compton radius 16  
 Computational methods for atoms 59  
 Conduction bands 86  
 Core states 45  
 Core–valence exchange energy 54  
 Coulomb potential 26  
 Crystal basis 81  
 Curl, Robert 203

### d

de Broglie, Louis 6  
 Crystal, definition of 82  
 Degenerate eigenvalues 76, 92  
 Deming, W. Edward 59

**m**

Magnetic clusters 169  
 Magnetic moment of an electron 16  
 Mass of the proton 7  
 MATLAB coding 4, 203  
 Matrix formalism 90  
 Mermin, N. David 40  
 Molecular dynamics 147  
 Molecular orbitals 125  
 Molecular orbitals for the carbon dimer 130  
 Molecular polarizability 140  
 Molecular polarizability tensor 140  
 Molecules, total energies 132  
 Momentum operator 29

**n**

Na clusters 159  
 Nanocrystal definition 177  
 Nanocrystals 177  
 Newton, Isaac 1  
 Non-collinear magnetism 171  
 Nontrivial solution 77  
 Norm-conserving pseudopotentials 52  
 Normalized states 19  
 Numerical integration of hydrogen wave functions 67

**o**

Observables in quantum theory 9  
 Optical absorption in atoms 113  
 Optical excitations in molecules 137  
 Optical excitations in the CO molecule 139  
 Optical properties of clusters 166  
 Orthogonal wave functions 20  
 Orthogonality condition 47  
 Oscillator strength 116

**p**

Partial core corrections to pseudopotentials 54  
 Particle duality 6  
 Particle in a box 30  
 Particle swarms 162  
 Paschen series 7

Passivation of nanocrystals 179  
 Pauli exclusion principle 25, 73, 111  
 Penn gap 184  
 Periodic table 15, 45  
 Perlis, Alan J. 19  
 Perturbation theory 114  
 Perturbation theory for the vibrational Stark shift 144  
 Phillips–Kleinman cancellation theorem 47  
 Phillips, James C. 47  
 Phillips–Kleinman pseudopotential 50  
 Phonon-assisted optical transitions 187  
 Phosphorus-doped silicon nanocrystals 191, 192  
 Planck's constant 5  
 Plasma frequency 118  
 Plasmon 184  
 Plenty of room at the bottom 177  
 Polarization functions 165  
 Polarization of sodium clusters 165  
 Power method for solving the eigenvalue problem 90, 92, 94  
 Power spectrum 121  
 Practical quantum mechanics 2  
 Principal quantum number 14  
 Probabilistic theory of quantum mechanics 9  
 Propagating atomic wave functions in time 119  
 Properties of the dicarbon molecule 133  
 Pseudopotential approximation 3  
 Pseudopotential energy dependence 54  
 Pseudopotential local component 56  
 Pseudopotential nonlocality 54  
 Pseudopotential repulsive potential 49  
 Pseudopotential state dependence 55  
 Pseudopotentials 45  
 Pulay forces 98
