

Index

a

absorption 9, 51, 83, 118, 134, 137, 142, 164, 181, 192, 206

- atomic absorption lines 8
- black body 118
- coefficients for Ge, Si, and GaAs 136, 138
- of crystalline Si 166
- direct heat 117
- effects in atmosphere 8, 9
- energy in semiconducting donor polymer 165
- materials with high absorption coefficients 210
- of neutrons 105
- of one-electron atoms 50
- of photons 2, 136, 154, 177, 188
- by Si, and similar semiconductors 74
- properties of solar cells 170
- ruthenium-based dye 156
- sunlight reaching earth diminished by 116

adsorption

- based hydrogen storage methods 200
- sites for H₂ 198
- for storing hydrogen in high density 196
- of two Ti atoms 198
- weak adsorption energy 196

AlP:Cr cell 184

alpha decay 46

alpha particle 10, 11, 46, 105, 106

- decay 32, 37, 45

aluminum foil 125, 148, 193, 211

ammonia synthesis loop 200

amorphous silicon 146, 167, 168, 205, 207

amorphous silicon:H-based solar cells 166–169

- constructed with amorphous layers of Si and Si–Ge alloys 168
- quantum efficiency 169

Amperes law 111

angular momentum 62, 64, 65, 71

- orientations of 63
- peculiarity 64

antireflection coating 133

artificial leaf energy conversion system 226, 229

artificial leaf of Nocera 193, 194

atoms 60, 64

Avogadro's number 59

azimuthal angle 61, 64, 116

b

back surface field (BSF) 134, 142, 158, 206

bandgap 56, 74, 75, 123, 141, 149, 151, 160, 170, 183, 189

- direct 136, 152
- energy 77, 135, 141–143, 180, 181
- indirect 74, 75, 166, 184
- junction 145
- molecular 163
- for oxide 153
- of silicon 141
- single-bandgap devices 147
- wide-bandgap AlGaAs window 142

band insulator 57

batteries

- energy densities 218
- Li-ion batteries 217–220
- Ni–Cd batteries 218
- NiH batteries 127, 218
- NiMH batteries 220–222
- Prius batteries 221
- rechargeable 217
- technology, investment in 226

binding energy 35, 43, 44

biofuels 9, 225

black body radiation 7–9, 113, 118, 144

- black body radiator 116
- Bohr orbit 181
- Bohr radius 67
- Bohr's model 51, 52, 62, 63
 - of hydrogen atom 49–52
- Boltzmann constant 59
- bond angle 72, 73
- bound states 33–35
- Bragg scattering 53
- bremsstrahlung 109
- BSF. *See* back surface field (BSF)

 - thermonuclear fusion 102
 - thin-film cell. *See* CdTe thin-film cells; CIGS (CuIn_{1-x}Ga_xSe₂) thin-film solar cells
 - thin-film solar cell manufacturers 207
 - three-layer silicon cells 208
 - Ti deposition 199
 - titanium-decorated carbon nanotube cloth 199, 200
 - titanium-decorated polyacetylene 198
 - titanium-decorated polymers 198
 - Tokamak reactors 87, 226
 - Tokamak plasma 85
 - evaluation 109
 - toroidal DT plasma 87
 - toroidal magnetic field 105
 - toxicity, of Cd 124
 - transmission line 5, 57
 - transparent conductive oxide (TCO) 167
 - tungsten trioxide blue light cell 193
 - tunnel diode interconnect 189
 - tunneling
 - model (*See* Gamow’s tunneling model)

tunneling (*Continued*)

- probability 36, 37, 39, 40, 46, 90, 92, 95
- quantum mechanical tunneling 13
- rates 96, 100

u

- ultimate efficiency 136
- United States
 - average power per person 221
 - distribution of wind speeds across 16
 - energy consumed in 4, 209
 - installation of single-crystal solar cells 140
 - map of requirement of land 15
 - Prius batteries 221
 - total average power 211, 212
 - wind turbine manufacture 229
- uranium alpha decay series 44

v

- vibrational width of motion 98
- voltage drop 189

w

- wall erosion, Tokamak 113
- water electrolysis 187, 188
- water oxidation energy level 190
- water, photocatalytic dissociation
 - dual-purpose thin-film tandem cell devices
 - possibility 193
 - hydrogen and oxygen 188–193
 - mass production tandem cell water-splitting device

- possibility 191–193

- water splitting
 - approach 190
 - efficiency 189
 - hydrogen production 188
 - mass production tandem cell water-splitting device 191–193
 - photocatalytic 188–193
 - vs. tandem cell 190, 191
 - zero photocurrent 190
- water turbines 5, 18, 24, 225
- wavefunctions 54, 58, 62, 63, 65
 - anisotropic 63
- wave number 53, 54
- wave probability 55
- wind power 213
 - electric 216
 - growth 223–225
 - renewable energy 225, 226
 - vs. solar power 214, 215
- wind turbines 214
 - manufacture 229
- WKB approximation 36, 95

x

- X-ray energies 90

z

- zero point energy 21, 98
- ZnPc/MPP organic solar cell 156
