Preface XIII

List of Contributors XV

- 1 **Nanoparticles Based on π -Conjugated Polymers and Oligomers for Optoelectronic, Imaging, and Sensing Applications: The Illustrative Example of Fluorene-Based Polymers and Oligomers** 1
Irén Fischer and Albertus P.H.J. Schenning
 - 1.1 Introduction 1
 - 1.2 Nanoparticles Based on Fluorene Polymers 3
 - 1.2.1 Optoelectronic Applications 3
 - 1.2.1.1 Characterization of Nanoparticles 3
 - 1.2.1.2 Nanoparticle Film Fabrication and Characterization 4
 - 1.2.1.3 OLEDs 5
 - 1.2.1.4 Solar Cell Applications 8
 - 1.2.2 Imaging and Sensing Applications 10
 - 1.2.2.1 Characterization of Nanoparticles 10
 - 1.2.2.2 Biosensing 11
 - 1.2.2.3 Bioimaging 14
 - 1.3 Nanoparticles Based on Fluorene Oligomer 16
 - 1.3.1 Characterization 16
 - 1.3.2 Nanoparticles for Sensing and Imaging 17
 - 1.4 Conclusions and Perspectives 18
 - References 19

- 2 **Conducting Polymers to Control and Monitor Cells** 27
Leslie H. Jimison, Jonathan Rivnay, and Róisín M. Owens
 - 2.1 Introduction 27
 - 2.2 Conducting Polymers for Biological Applications 28
 - 2.2.1 Unique Benefits of Conducting Polymers 29
 - 2.2.2 Biocompatibility of Conducting Polymers 30
 - 2.2.3 Electrochemical Properties and Tools 31
 - 2.3 Conducting Polymers to Control Cells 32
 - 2.3.1 Establishing Conducting Polymers as Cell Culture Environments 32

2.3.2	Optimizing Conducting Polymers for Cell Culture	32
2.3.3	Controlling Cell Adhesion via Redox State	33
2.3.3.1	Redox Switches	34
2.3.3.2	Redox Gradients	35
2.3.3.3	Protein Characterization as a Function of Redox State	36
2.3.4	Direct Patterning of Proteins to Control Cell Adhesion	38
2.3.5	Controlling Cell Growth and Development	39
2.3.5.1	Electrical Stimulation to Promote Neurite Formation and Extension	39
2.3.5.2	Electrical Stimulation to Promote Muscle Cell Proliferation and Differentiation	39
2.3.5.3	Alignment Control via Topographical Cues	40
2.3.5.4	Incorporation of Biomolecules to Control Differentiation	43
2.3.6	Organic Electronic Ion Pumps	46
2.3.7	On-Demand Cell Release	48
2.3.8	Conducting Polymer Actuators	48
2.3.9	Optoelectronic Control of Cell Behavior	49
2.4	Conducting Polymers to Monitor Cells	50
2.4.1	Conducting Polymers to Monitor Neuronal Function	51
2.4.1.1	Conducting Polymer Electrodes	51
2.4.1.2	Transistors	57
2.4.2	Conducting Polymers to Monitor Behavior of Nonelectrically Active Cells	57
2.5	Conclusions	59
	References	59
3	Medical Applications of Organic Bioelectronics	69
	<i>Salvador Gomez-Carretero and Peter Kjäll</i>	
3.1	Introduction	69
3.2	Regenerative Medicine and Biomedical Devices	71
3.2.1	Scaffolds, Signaling Interfaces, and Surfaces for Novel Biomedical Applications	71
3.2.1.1	Scaffolds and Surface Modulation	71
3.2.1.2	Biomolecule Presenting Surfaces	72
3.2.1.3	Degradable Surfaces for Biomedical Applications	73
3.2.1.4	Controlled Substance Release	73
3.2.2	Prosthetics and Medical Devices	75
3.2.2.1	Organic Bioelectronics as Actuators	76
3.2.2.2	Neuroprosthetics	77
3.3	Organic Electronics in Biomolecular Sensing and Diagnostic Applications	80
3.3.1	Organic Electronics as Biomolecule Sensors: A Technological Overview	80
3.3.2	Small-Molecule and Biological Metabolite Sensing	81
3.3.3	Immunosensors	82

3.3.4	DNA Sensing	83
3.3.5	Medical Diagnosis and the Electronic Nose	83
3.4	Concluding Remarks	85
	References	85
4	A Hybrid Ionic–Electronic Conductor: Melanin, the First Organic Amorphous Semiconductor?	91
	<i>Paul Meredith, Kristen Tandy, and Albertus B. Mostert</i>	
4.1	Introduction and Background	91
4.2	Physical and Optical Properties of Melanin and the Transport Physics of Disordered Semiconductors	94
4.3	The Hydration Dependence of Melanin Conductivity	97
4.4	Muon Spin Relaxation Spectroscopy and Electron Paramagnetic Resonance	101
4.5	Transport Model for Electrical Conduction and Photoconduction in Melanin	104
4.6	Bioelectronics, Hybrid Devices, and Future Perspectives	107
	References	110
5	Eumelanin: An Old Natural Pigment and a New Material for Organic Electronics – Chemical, Physical, and Structural Properties in Relation to Potential Applications	113
	<i>Alessandro Pezzella and Julia Wünsche</i>	
5.1	Introduction: The “Nature-Inspired”	113
5.2	Natural Melanins	114
5.2.1	Overview	114
5.2.2	Distribution and Isolation of Natural Eumelanin	115
5.2.3	Melanogenesis: From Understanding the <i>In Vivo</i> Path to <i>In Vitro</i> Pigment Preparation	116
5.3	Synthetic Melanins	118
5.3.1	Overview	118
5.3.2	Oxidative Polymerization of 5,6-Dihydroxyindole(s)	118
5.4	Chemical–Physical Properties and Structure–Property Correlation	122
5.4.1	Stability against Acids and Bases	122
5.4.2	Molecular Weight	123
5.4.3	Hydration, Aggregation, and Supramolecular Organization	124
5.4.4	Light Absorption and Scattering	125
5.4.5	Metal Chelation	126
5.4.6	Redox State	127
5.4.7	Autoxidation	128
5.4.8	Bleaching	129
5.4.9	NMR Spectroscopy	130
5.4.10	EPR Spectroscopy	130
5.5	Thin Film Fabrication	131

5.6	Melanin Hybrid Materials	132
5.7	Conclusions	133
	References	133
6	New Materials for Transparent Electrodes	139
	<i>Thomas W. Phillips and John C. de Mello</i>	
6.1	Introduction	139
6.1.1	Indium Tin Oxide	139
6.1.2	Optoelectronic Characteristics	140
6.1.2.1	The Influence of Sheet Resistance	143
6.1.2.2	Optical Transparency	146
6.1.2.3	Transmittance Versus Sheet Resistance Trade-off Characteristics	146
6.1.2.4	Work Function	147
6.2	Emergent Electrode Materials	149
6.2.1	Graphene	149
6.2.1.1	Fabrication	151
6.2.1.2	Outlook	152
6.2.2	Carbon Nanotubes	153
6.2.2.1	Structure	153
6.2.2.2	Networks	155
6.2.2.3	Film Fabrication	156
6.2.2.4	Improving Performance	158
6.2.3	Metal Nanowires	161
6.2.3.1	Silver Nanowires	161
6.2.3.2	Alternative Metal Nanowires	164
6.3	Conclusions	166
	References	167
7	Ionic Carriers in Polymer Light-Emitting and Photovoltaic Devices	175
	<i>Sam Toshner and Janelle Leger</i>	
7.1	Polymer Light-Emitting Electrochemical Cells	175
7.2	Ionic Carriers	178
7.3	Fixed Ionic Carriers	181
7.4	Fixed Junction LEC-Based Photovoltaic Devices	183
7.5	Conclusions	184
	References	185
8	Recent Trends in Light-Emitting Organic Field-Effect Transistors	187
	<i>Jana Zaumseil</i>	
8.1	Introduction	187
8.2	Working Principle	188
8.2.1	Unipolar LEFETs	188
8.2.2	Ambipolar LEFETs	190
8.3	Recent Trends and Developments	197
8.3.1	Heterojunction Light-Emitting FETs	197

8.3.2	Single-Crystal Light-Emitting FETs	200
8.3.3	Carbon Nanotube Light-Emitting FETs	204
8.4	Conclusions	206
	References	206
9	Toward Electrolyte-Gated Organic Light-Emitting Transistors: Advances and Challenges	215
	<i>Jonathan Sayago, Sareh Bayatpour, Fabio Cicoira, and Clara Santato</i>	
9.1	Introduction	215
9.2	Electrolyte-Gated Organic Transistors	216
9.3	Electrolytes Employed in Electrolyte-Gated Organic Transistors	218
9.4	Preliminary Results and Challenges in Electrolyte-Gated Organic Light-Emitting Transistors	220
9.5	Relevant Questions and Perspectives in the Field of EG-OLETs	226
	References	227
10	Photophysical and Photoconductive Properties of Novel Organic Semiconductors	233
	<i>Oksana Ostroverkhova</i>	
10.1	Introduction	233
10.2	Overview of Materials	234
10.2.1	Benzothiophene, Anthradithiophene, and Longer Heteroacene Derivatives	234
10.2.2	Pentacene and Hexacene Derivatives	236
10.2.3	Indenofluorene Derivatives	238
10.3	Optical and Photoluminescent Properties of Molecules in Solutions and in Host Matrices	238
10.4	Aggregation and Its Effect on Optoelectronic Properties	241
10.4.1	J-Versus H-Aggregate Formation	241
10.4.2	Example of Aggregation: Disordered H-Aggregates in ADT-TES-F Films	241
10.4.2.1	Aggregate Formation: Optical and Photoluminescent Properties	242
10.4.2.2	Aggregate Formation: Photoconductive Properties	243
10.4.2.3	ADT-TES-F Aggregates: Identification and Properties	244
10.4.3	Effects of Molecular Packing on Spectra	246
10.4.3.1	Molecular Structure and Solid-State Packing	246
10.4.3.2	Film Morphology and Spectra	247
10.5	(Photo)Conductive Properties of Pristine Materials	248
10.5.1	Ultrafast Photophysics and Charge Transport on Picosecond Timescales	248
10.5.2	Charge Transport on Nanosecond and Longer Timescales	250
10.5.3	Dark Current and cw Photocurrent	251
10.6	Donor-Acceptor Composites	252
10.6.1	Donor-Acceptor Interactions: FRET versus Exciplex Formation	254

- 10.6.2 Donor–Acceptor Interactions Depending on the Donor–Acceptor LUMO Energies Offset, Donor and Acceptor Separation, and Film Morphology 256
- 10.6.2.1 Effects on the Photoluminescence 256
- 10.6.2.2 Effects on the Photocurrent 257
- 10.7 Summary and Outlook 260
- References 261

11 Engineering Active Materials for Polymer-Based Organic Photovoltaics 273

Andrew Ferguson, Wade Braunecker, Dana Olson, and Nikos Kopidakis

- 11.1 Introduction 273
- 11.2 Device Architectures and Operating Principles 276
- 11.2.1 Device Architectures 276
- 11.2.1.1 Active Layer 276
- 11.2.1.2 Contacts 277
- 11.2.2 Energetics of Charge Generation in OPV Devices 278
- 11.3 Bandgap Engineering: Low-Bandgap Polymers 283
- 11.4 Molecular Acceptor Materials for OPV 285
- 11.4.1 Morphology 286
- 11.4.2 Electron Affinity 288
- 11.4.3 Stabilization of Reduced Acceptor 290
- 11.4.4 Complementary Light Absorption 292
- 11.5 Summary 295
- References 295

12 Single-Crystal Organic Field-Effect Transistors 301

Taishi Takenobu and Yoshihiro Iwasa

- 12.1 Introduction 301
- 12.2 Single-Crystal Growth 302
- 12.3 MISFET 303
- 12.4 Schottky Diode and MESFET 304
- 12.5 Ambipolar Transistor 307
- 12.6 Light-Emitting Ambipolar Transistor 309
- 12.7 Electric Double-Layer Transistor 312
- 12.8 Conclusion 315
- References 316

13 Large-Area Organic Electronics: Inkjet Printing and Spray Coating Techniques 319

Oana D. Jurchescu

- 13.1 Introduction 319
- 13.2 Organic Electronic Devices – Operation Principles 320
- 13.3 Materials for Organic Large-Area Electronics 322
- 13.4 Manufacturing Processes for Large-Area Electronics 324

13.4.1	Organic Devices Fabricated by Printing Methods	325
13.4.1.1	Soft Lithography	325
13.4.1.2	Inkjet Printing	328
13.4.2	Spray Deposition for Organic Large-Area Electronics	330
13.4.2.1	Motivation and Technical Aspects for Spray Deposition	330
13.4.2.2	Top Electrodes Deposited by Spray Coating	332
13.4.2.3	Spray-Deposited Organic Thin-Film Transistors	333
13.4.2.4	Large-Area, Low-Cost Spray-Deposited Organic Solar Cells	334
13.5	Conclusions	335
	References	335
14	Electronic Traps in Organic Semiconductors	341
	<i>Alberto Salleo</i>	
14.1	Introduction	341
14.2	What are Traps in Organic Semiconductors and Where Do They Come From?	343
14.3	Effect of Traps on Electronic Devices	345
14.3.1	Transistors	345
14.3.2	Light-Emitting Diodes	347
14.3.3	Photovoltaics	348
14.3.4	Sensors	348
14.4	Detecting Traps in Organic Semiconductors	349
14.4.1	Optical Methods	349
14.4.2	Scanning Probe Methods	351
14.4.3	Electrical Methods	352
14.4.4	Use of Electronic Devices	353
14.5	Experimental Data on Traps in Organic Semiconductors	358
14.5.1	Traps in Organic Single Crystals	358
14.5.2	Traps in Polycrystalline Thin Films	364
14.5.3	Traps in Conjugated Polymer Thin Films	368
14.6	Conclusions and Outlook	372
	References	373
15	Perspectives on Organic Spintronics	381
	<i>Alberto Riminucci, Mirko Prezioso, and Patrizio Graziosi</i>	
15.1	Introduction	381
15.2	Magnetoresistive Phenomena in Organic Semiconductors	382
15.2.1	Interface Phenomena – The Role of Tunnel Barriers	384
15.2.2	Bulk Phenomena and Spin Transport	387
15.2.3	Interplay between Conductivity Switching and Spin Transport	388
15.3	Applications of Organic Spintronics	390
15.3.1	Sensor Applications	390
15.3.2	Memristive Phenomena in a Prototypical Spintronic Device	391

15.4	Future Developments	396
	References	397
16	Organic-Based Thin-Film Devices Produced Using the Neutral Cluster Beam Deposition Method	401
	<i>Hoon-Seok Seo, Jeong-Do Oh, and Jong-Ho Choi</i>	
16.1	Introduction	401
16.2	Neutral Cluster Beam Deposition Method	403
16.3	Organic Thin Films and Organic Field-Effect Transistors	405
16.3.1	Morphological and Structural Properties of Organic Thin Films	406
16.3.2	Characterization of OFETs	408
16.3.3	Transport Phenomena	412
16.4	Organic Light-Emitting Field-Effect Transistors	414
16.4.1	Characterization of the Component OFETs of Ambipolar OLEFETs	416
16.4.2	Electroluminescence and Conduction Mechanism	419
16.5	Organic CMOS Inverters	422
16.5.1	Characterization of the Component OFETs of Organic CMOS Inverters	422
16.5.2	Realization of Air-Stable, Hysteresis-Free Organic CMOS Inverters	425
16.6	Summary	427
	References	428
