## Contents

Foreword xix Preface xxiii Editors' Note xxvii

#### Part I Fundamental Principles 1

- 1 The Principle of Wave–Particle Duality: An Overview 3
- 1.1 Introduction 3
- 1.2 The Principle of Wave–Particle Duality of Light 4
- 1.2.1 The Photoelectric Effect 4
- 1.2.2 The Compton Effect 7
- 1.2.3 A Note on Units 10
- 1.3 The Principle of Wave–Particle Duality of Matter *11*
- 1.3.1 From Frequency Quantization in Classical Waves to Energy Quantization in Matter Waves: The Most Important General Consequence of Wave–Particle Duality of Matter *12*
- 1.3.2 The Problem of Atomic Stability under Collisions 13
- 1.3.3 The Problem of Energy Scales: Why Are Atomic Energies on the Order of eV, While Nuclear Energies Are on the Order of MeV? *15*
- 1.3.4 The Stability of Atoms and Molecules Against External Electromagnetic Radiation *17*
- 1.3.5 The Problem of Length Scales: Why Are Atomic Sizes on the Order of Angstroms, While Nuclear Sizes Are on the Order of Fermis? *19*
- 1.3.6 The Stability of Atoms Against Their Own Radiation: Probabilistic Interpretation of Matter Waves *21*
- 1.3.7 How Do Atoms Radiate after All? Quantum Jumps from Higher to Lower Energy States and Atomic Spectra 22
- 1.3.8 Quantized Energies and Atomic Spectra: The Case of Hydrogen 25
- 1.3.9 Correct and Incorrect Pictures for the Motion of Electrons in Atoms: Revisiting the Case of Hydrogen 25
- 1.3.10 The Fine Structure Constant and Numerical Calculations in Bohr's Theory 29

## viii Contents

1.3.11	Numerical Calculations with Matter Waves: Practical Formulas and
1 0 10	Physical Applications 31
1.3.12	A Direct Confirmation of the Existence of Matter Waves: The Davisson–Germer Experiment 33
1.3.13	The Double-Slit Experiment: Collapse of the Wavefunction Upon Measurement 34
1.4	Dimensional Analysis and Quantum Physics 41
1.4.1	The Fundamental Theorem and a Simple Application 41
1.4.2	Blackbody Radiation Using Dimensional Analysis 44
1.4.3	The Hydrogen Atom Using Dimensional Analysis 47
2	The Schrödinger Equation and Its Statistical Interpretation 53
2.1	Introduction 53
2.2	The Schrödinger Equation 53
2.2.1	The Schrödinger Equation for Free Particles 54
2.2.2	The Schrödinger Equation in an External Potential 57
2.2.3	Mathematical Intermission I: Linear Operators 58
2.3	Statistical Interpretation of Quantum Mechanics 60
2.3.1	The "Particle–Wave" Contradiction in Classical Mechanics 60
2.3.2	Statistical Interpretation 61
2.3.3	Why Did We Choose $P(x) =  \psi(x) ^2$ as the Probability Density? 62
2.3.4	Mathematical Intermission II: Basic Statistical Concepts 63
2.3.4.1	Mean Value 63
2.3.4.2	Standard Deviation (or Uncertainty) 65
2.3.5	Position Measurements: Mean Value and Uncertainty 67
2.4	Further Development of the Statistical Interpretation: The Mean-Value Formula <i>71</i>
2.4.1	The General Formula for the Mean Value 71
2.4.2	The General Formula for Uncertainty 73
2.5	Time Evolution of Wavefunctions and Superposition States 77
2.5.1	Setting the Stage 77
2.5.2	Solving the Schrödinger Equation. Separation of Variables 78
2.5.3	The Time-Independent Schrödinger Equation as an Eigenvalue
	Equation: Zero-Uncertainty States and Superposition States 81
2.5.4	Energy Quantization for Confined Motion: A Fundamental General
21011	Consequence of Schrödinger's Equation 85
2.5.5	The Role of Measurement in Quantum Mechanics: Collapse of the
	Wavefunction Upon Measurement 86
2.5.6	Measurable Consequences of Time Evolution: Stationary and
	Nonstationary States 91
2.6	Self-Consistency of the Statistical Interpretation and the Mathematical
	Structure of Quantum Mechanics 95
2.6.1	Hermitian Operators 95
2.6.2	Conservation of Probability 98
2.6.3	Inner Product and Orthogonality 99
2.6.4	Matrix Representation of Quantum Mechanical Operators 101
2.0. <del>1</del> 2.7	Summary: Quantum Mechanics in a Nutshell 103
	Summer / Summer meeting of a manual for

- **3** The Uncertainty Principle 107
- 3.1 Introduction 107
- 3.2 The Position–Momentum Uncertainty Principle 108
- 3.2.1 Mathematical Explanation of the Principle 108
- 3.2.2 Physical Explanation of the Principle 109
- 3.2.3 Quantum Resistance to Confinement. A Fundamental Consequence of the Position–Momentum Uncertainty Principle *112*
- 3.3 The Time–Energy Uncertainty Principle 114
- 3.4 The Uncertainty Principle in the Classical Limit *118*
- 3.5 General Investigation of the Uncertainty Principle *119*
- 3.5.1 Compatible and Incompatible Physical Quantities and the Generalized Uncertainty Relation *119*
- 3.5.2 Angular Momentum: A Different Kind of Vector 122

#### Part II Simple Quantum Systems 127

- 4 Square Potentials. I: Discrete Spectrum—Bound States 129
- 4.1 Introduction 129
- 4.2 Particle in a One-Dimensional Box: The Infinite Potential Well 132
- 4.2.1 Solution of the Schrödinger Equation 132
- 4.2.2 Discussion of the Results 134
- 4.2.2.1 Dimensional Analysis of the Formula  $E_n = (\hbar^2 \pi^2 / 2mL^2)n^2$ . Do We Need an Exact Solution to Predict the Energy Dependence on  $\hbar$ , *m*, and *L*? *135*
- 4.2.2.2 Dependence of the Ground-State Energy on  $\hbar$ , *m*, and *L* : The Classical Limit 136
- 4.2.2.3 The Limit of Large Quantum Numbers and Quantum Discontinuities *137*
- 4.2.2.4 The Classical Limit of the Position Probability Density 138
- 4.2.2.5 Eigenfunction Features: Mirror Symmetry and the Node Theorem *139*
- 4.2.2.6 Numerical Calculations in Practical Units 139
- 4.3 The Square Potential Well 140
- 4.3.1 Solution of the Schrödinger Equation 140
- 4.3.2 Discussion of the Results 143
- 4.3.2.1 Penetration into Classically Forbidden Regions 143
- 4.3.2.2 Penetration in the Classical Limit 144
- 4.3.2.3 The Physics and "Numerics" of the Parameter  $\lambda$  145
- 5 Square Potentials. II: Continuous Spectrum—Scattering States 149
- 5.1 Introduction 149
- 5.2 The Square Potential Step: Reflection and Transmission 150
- 5.2.1 Solution of the Schrödinger Equation and Calculation of the Reflection Coefficient *150*
- 5.2.2 Discussion of the Results 153

<b>x</b> Contents
-------------------

- 5.2.2.1 The Phenomenon of Classically Forbidden Reflection 153
- 5.2.2.2 Transmission Coefficient in the "Classical Limit" of High Energies *154*
- 5.2.2.3 The Reflection Coefficient Depends neither on Planck's Constant nor on the Mass of the Particle: Analysis of a Paradox 154
- 5.2.2.4 An Argument from Dimensional Analysis 155
- 5.3 Rectangular Potential Barrier: Tunneling Effect 156
- 5.3.1 Solution of the Schrödinger Equation 156
- 5.3.2 Discussion of the Results 158
- 5.3.2.1 Crossing a Classically Forbidden Region: The Tunneling Effect 158
- 5.3.2.2 Exponential Sensitivity of the Tunneling Effect to the Energy of the Particle *159*
- 5.3.2.3 A Simple Approximate Expression for the Transmission Coefficient *160*
- 5.3.2.4 Exponential Sensitivity of the Tunneling Effect to the Mass of the Particle *162*
- 5.3.2.5 A Practical Formula for T = 163

#### 6 The Harmonic Oscillator 167

- 6.1 Introduction 167
- 6.2 Solution of the Schrödinger Equation 169
- 6.3 Discussion of the Results 177
- 6.3.1 Shape of Wavefunctions. Mirror Symmetry and the Node Theorem *178*
- 6.3.2 Shape of Eigenfunctions for Large *n*: The Classical Limit *179*
- 6.3.3 The Extreme Anticlassical Limit of the Ground State 180
- 6.3.4 Penetration into Classically Forbidden Regions: What Fraction of Its "Lifetime" Does the Particle "Spend" in the Classically Forbidden Region? *181*
- 6.3.5 A Quantum Oscillator Never Rests: Zero-Point Energy 182
- 6.3.6 Equidistant Eigenvalues and Emission of Radiation from a Quantum Harmonic Oscillator *184*
- 6.4 A Plausible Question: Can We Use the Polynomial Method to Solve Potentials Other than the Harmonic Oscillator? 187
- 7 The Polynomial Method: Systematic Theory and Applications 191
- 7.1 Introduction: The Power-Series Method 191
- 7.2 Sufficient Conditions for the Existence of Polynomial Solutions: Bidimensional Equations *194*
- 7.3 The Polynomial Method in Action: Exact Solution of the Kratzer and Morse Potentials *197*
- 7.4 Mathematical Afterword 202

#### 8 The Hydrogen Atom. I: Spherically Symmetric Solutions 207

8.1 Introduction 207

- 8.2 Solving the Schrödinger Equation for the Spherically Symmetric Eigenfunctions 209
- 8.2.1 A Final Comment: The System of Atomic Units 216
- 8.3 Discussion of the Results 217
- 8.3.1 Checking the Classical Limit  $\hbar \to 0$  or  $m \to \infty$  for the Ground State of the Hydrogen Atom 217
- 8.3.2 Energy Quantization and Atomic Stability 217
- 8.3.3 The Size of the Atom and the Uncertainty Principle: The Mystery of Atomic Stability from Another Perspective 218
- 8.3.4 Atomic Incompressibility and the Uncertainty Principle 221
- 8.3.5 More on the Ground State of the Atom. Mean and Most Probable Distance of the Electron from the Nucleus 221
- 8.3.6 Revisiting the Notion of "Atomic Radius": How Probable is It to Find the Electron Within the "Volume" that the Atom Supposedly Occupies? 222
- 8.3.7 An Apparent Paradox: After All, Where Is It Most Likely to Find the Electron? Near the Nucleus or One Bohr Radius Away from It? 223
- 8.3.8 What Fraction of Its Time Does the Electron Spend in the Classically Forbidden Region of the Atom? 223
- 8.3.9 Is the Bohr Theory for the Hydrogen Atom Really Wrong? Comparison with Quantum Mechanics 225
- 8.4 What Is the Electron Doing in the Hydrogen Atom after All? A First Discussion on the Basic Questions of Quantum Mechanics 226
- 9 The Hydrogen Atom. II: Solutions with Angular Dependence 231
- 9.1 Introduction 231
- 9.2 The Schrödinger Equation in an Arbitrary Central Potential: Separation of Variables 232
- 9.2.1 Separation of Radial from Angular Variables 232
- 9.2.2 The Radial Schrödinger Equation: Physical Interpretation of the Centrifugal Term and Connection to the Angular Equation 235
- 9.2.3 Solution of the Angular Equation: Eigenvalues and Eigenfunctions of Angular Momentum 237
- 9.2.3.1 Solving the Equation for  $\Phi$  238
- 9.2.3.2 Solving the Equation for  $\Theta$  239
- 9.2.4 Summary of Results for an Arbitrary Central Potential 243
- 9.3 The Hydrogen Atom 246
- 9.3.1 Solution of the Radial Equation for the Coulomb Potential 246
- 9.3.2 Explicit Construction of the First Few Eigenfunctions 249
- 9.3.2.1 *n* = 1 : The Ground State 250
- 9.3.2.2 n = 2: The First Excited States 250
- 9.3.3 Discussion of the Results 254
- 9.3.3.1 The Energy-Level Diagram 254
- 9.3.3.2 Degeneracy of the Energy Spectrum for a Coulomb Potential: Rotational and Accidental Degeneracy 255
- 9.3.3.3 Removal of Rotational and Hydrogenic Degeneracy 257

#### xii Contents

- 9.3.3.4 The Ground State is Always Nondegenerate and Has the Full Symmetry of the Problem 257
- 9.3.3.5 Spectroscopic Notation for Atomic States 258
- 9.3.3.6 The "Concept" of the Orbital: *s* and *p* Orbitals 258
- 9.3.3.7 Quantum Angular Momentum: A Rather Strange Vector 261
- 9.3.3.8 Allowed and Forbidden Transitions in the Hydrogen Atom: Conservation of Angular Momentum and Selection Rules 263
- 10 Atoms in a Magnetic Field and the Emergence of Spin 267
- 10.1 Introduction 267
- 10.2 Atomic Electrons as Microscopic Magnets: Magnetic Moment and Angular Momentum 270
- 10.3 The Zeeman Effect and the Evidence for the Existence of Spin 274
- 10.4 The Stern–Gerlach Experiment: Unequivocal Experimental Confirmation of the Existence of Spin 278
- 10.4.1 Preliminary Investigation: A Plausible Theoretical Description of Spin 278
- 10.4.2 The Experiment and Its Results 280
- 10.5 What is Spin? 284
- 10.5.1 Spin is No Self-Rotation 284
- 10.5.2 How is Spin Described Quantum Mechanically? 285
- 10.5.3 What Spin Really Is 291
- 10.6 Time Evolution of Spin in a Magnetic Field 292
- 10.7 Total Angular Momentum of Atoms: Addition of Angular Momenta 295
- 10.7.1 The Eigenvalues 295
- 10.7.2 The Eigenfunctions 300

#### 11 Identical Particles and the Pauli Principle 305

- 11.1 Introduction 305
- 11.2 The Principle of Indistinguishability of Identical Particles in Quantum Mechanics 305
- 11.3 Indistinguishability of Identical Particles and the Pauli Principle 306
- 11.4 The Role of Spin: Complete Formulation of the Pauli Principle 307
- 11.5 The Pauli Exclusion Principle 310
- 11.6 Which Particles Are Fermions and Which Are Bosons 314
- 11.7 Exchange Degeneracy: The Problem and Its Solution 317

# Part III Quantum Mechanics in Action: The Structure of Matter 321

- 12 Atoms: The Periodic Table of the Elements 323
- 12.1 Introduction 323
- 12.2 Arrangement of Energy Levels in Many-Electron Atoms: The Screening Effect 324

- 12.3 Quantum Mechanical Explanation of the Periodic Table: The "Small Periodic Table" *327*
- 12.3.1 Populating the Energy Levels: The Shell Model 328
- 12.3.2 An Interesting "Detail": The Pauli Principle and Atomic Magnetism *329*
- 12.3.3 Quantum Mechanical Explanation of Valence and Directionality of Chemical Bonds 331
- 12.3.4 Quantum Mechanical Explanation of Chemical Periodicity: The Third Row of the Periodic Table 332
- 12.3.5 Ionization Energy and Its Role in Chemical Behavior 334
- 12.3.6 Examples 338
- 12.4 Approximate Calculations in Atoms: Perturbation Theory and the Variational Method 341
- 12.4.1 Perturbation Theory 342
- 12.4.2 Variational Method 346

#### 13 Molecules. I: Elementary Theory of the Chemical Bond 351

- 13.1 Introduction 351
- 13.2 The Double-Well Model of Chemical Bonding 352
- 13.2.1 The Symmetric Double Well 352
- 13.2.2 The Asymmetric Double Well 356
- 13.3 Examples of Simple Molecules *360*
- 13.3.1 The Hydrogen Molecule  $H_2$  360
- 13.3.2 The Helium "Molecule" He<sub>2</sub> 363
- 13.3.3 The Lithium Molecule Li<sub>2</sub> 364
- 13.3.4 The Oxygen Molecule  $O_2$  364
- 13.3.5 The Nitrogen Molecule N<sub>2</sub> 366
- 13.3.6 The Water Molecule  $H_2O$  367
- 13.3.7 Hydrogen Bonds: From the Water Molecule to Biomolecules 370
- 13.3.8 The Ammonia Molecule  $NH_3$  373
- 13.4 Molecular Spectra 377
- 13.4.1 Rotational Spectrum 378
- 13.4.2 Vibrational Spectrum 382
- 13.4.3 The Vibrational–Rotational Spectrum 385

#### 14 Molecules. II: The Chemistry of Carbon 393

- 14.1 Introduction 393
- 14.2 Hybridization: The First Basic Deviation from the Elementary Theory of the Chemical Bond 393
- 14.2.1 The CH<sub>4</sub> Molecule According to the Elementary Theory: An Erroneous Prediction *393*
- 14.2.2 Hybridized Orbitals and the CH<sub>4</sub> Molecule 395
- 14.2.3 Total and Partial Hybridization 401
- 14.2.4 The Need for Partial Hybridization: The Molecules C $_2H_4$ , C $_2H_2$ , and C $_2H_6$  404
- 14.2.5 Application of Hybridization Theory to Conjugated Hydrocarbons *408*

## xiv Contents

- 14.2.6 Energy Balance of Hybridization and Application to Inorganic Molecules 409
- 14.3 Delocalization: The Second Basic Deviation from the Elementary Theory of the Chemical Bond *414*
- 14.3.1 A Closer Look at the Benzene Molecule 414
- 14.3.2 An Elementary Theory of Delocalization: The Free-Electron Model 417
- 14.3.3 LCAO Theory for Conjugated Hydrocarbons. I: Cyclic Chains 418
- 14.3.4 LCAO Theory for Conjugated Hydrocarbons. II: Linear Chains 424
- 14.3.5 Delocalization on Carbon Chains: General Remarks 427
- 14.3.6 Delocalization in Two-dimensional Arrays of *p* Orbitals: Graphene and Fullerenes *429*
- 15 Solids: Conductors, Semiconductors, Insulators 439
- 15.1 Introduction 439
- 15.2 Periodicity and Band Structure 439
- 15.3 Band Structure and the "Mystery of Conductivity." Conductors, Semiconductors, Insulators 441
- 15.3.1 Failure of the Classical Theory 441
- 15.3.2 The Quantum Explanation 443
- 15.4 Crystal Momentum, Effective Mass, and Electron Mobility 447
- 15.5 Fermi Energy and Density of States 453
- 15.5.1 Fermi Energy in the Free-Electron Model 453
- 15.5.2 Density of States in the Free-Electron Model 457
- 15.5.3 Discussion of the Results: Sharing of Available Space by the Particles of a Fermi Gas 460
- 15.5.4 A Classic Application: The "Anomaly" of the Electronic Specific Heat of Metals 463

#### 16 Matter and Light: The Interaction of Atoms with Electromagnetic Radiation 469

- 16.1 Introduction 469
- 16.2 The Four Fundamental Processes: Resonance, Scattering, Ionization, and Spontaneous Emission 471
- 16.3 Quantitative Description of the Fundamental Processes: Transition Rate, Effective Cross Section, Mean Free Path 473
- 16.3.1 Transition Rate: The Fundamental Concept 473
- 16.3.2 Effective Cross Section and Mean Free Path 475
- 16.3.3 Scattering Cross Section: An Instructive Example 476
- 16.4 Matter and Light in Resonance. I: Theory 478
- 16.4.1 Calculation of the Effective Cross Section: Fermi's Rule 478
- 16.4.2 Discussion of the Result: Order-of-Magnitude Estimates and Selection Rules 481
- 16.4.3 Selection Rules: Allowed and Forbidden Transitions 483
- 16.5 Matter and Light in Resonance. II: The Laser 487
- 16.5.1 The Operation Principle: Population Inversion and the Threshold Condition 487

- 16.5.2 Main Properties of Laser Light 491
- 16.5.2.1 Phase Coherence 491
- 16.5.2.2 Directionality 491
- 16.5.2.3 Intensity 491
- 16.5.2.4 Monochromaticity 492
- 16.6 Spontaneous Emission 494
- 16.7 Theory of Time-dependent Perturbations: Fermi's Rule 499
- 16.7.1 Approximate Calculation of Transition Probabilities  $P_{n \to m}(t)$  for an Arbitrary "Transient" Perturbation V(t) 499
- 16.7.2 The Atom Under the Influence of a Sinusoidal Perturbation: Fermi's Rule for Resonance Transitions 503
- 16.8 The Light Itself: Polarized Photons and Their Quantum Mechanical Description *511*
- 16.8.1 States of Linear and Circular Polarization for Photons 511
- 16.8.2 Linear and Circular Polarizers 512
- 16.8.3 Quantum Mechanical Description of Polarized Photons 513

## **Online Supplement**

- 1 The Principle of Wave–Particle Duality: An Overview
- OS1.1 Review Quiz
- OS1.1 Determining Planck's Constant from Everyday Observations

## 2 The Schrödinger Equation and Its Statistical Interpretation

- OS2.1 Review Quiz
- OS2.2 Further Study of Hermitian Operators: The Concept of the Adjoint Operator
- OS2.3 Local Conservation of Probability: The Probability Current

## 3 The Uncertainty Principle

- OS3.1 Review Quiz
- OS3.2 Commutator Algebra: Calculational Techniques
- OS3.3 The Generalized Uncertainty Principle
- OS3.4 Ehrenfest's Theorem: Time Evolution of Mean Values and the Classical Limit

## 4 Square Potentials. I: Discrete Spectrum—Bound States

- OS4.1 Review Quiz
- OS4.2 Square Well: A More Elegant Graphical Solution for Its Eigenvalues
- OS4.3 Deep and Shallow Wells: Approximate Analytic Expressions for Their Eigenvalues
- 5 Square Potentials. II: Continuous Spectrum—Scattering States
- OS5.1 Review Quiz
- OS5.2 Quantum Mechanical Theory of Alpha Decay

## xvi Contents

#### 6 The Harmonic Oscillator

- OS6.1 Review Quiz
- OS6.2 Algebraic Solution of the Harmonic Oscillator: Creation and Annihilation Operators

#### 7 The Polynomial Method: Systematic Theory and Applications

- OS7.1 Review Quiz
- OS7.2 An Elementary Method for Discovering Exactly Solvable Potentials
- OS7.3 Classic Examples of Exactly Solvable Potentials: A Comprehensive List

#### 8 The Hydrogen Atom. I: Spherically Symmetric Solutions

OS8.1 Review Quiz

#### 9 The Hydrogen Atom. II: Solutions with Angular Dependence

- OS9.1 Review Quiz
- OS9.2 Conservation of Angular Momentum in Central Potentials, and Its Consequences
- OS9.3 Solving the Associated Legendre Equation on Our Own

#### 10 Atoms in a Magnetic Field and the Emergence of Spin

- OS10.1 Review Quiz
- OS10.2 Algebraic Theory of Angular Momentum and Spin

#### 11 Identical Particles and the Pauli Principle

- OS11.1 Review Quiz
- OS11.2 Dirac's Formalism: A Brief Introduction

## 12 Atoms: The Periodic Table of the Elements

- OS12.1 Review Quiz
- OS12.2 Systematic Perturbation Theory: Application to the Stark Effect and Atomic Polarizability

## 13 Molecules. I: Elementary Theory of the Chemical Bond

OS13.1 Review Quiz

## 14 Molecules. II: The Chemistry of Carbon

- OS14.1 Review Quiz
- OS14.2 The LCAO Method and Matrix Mechanics
- OS14.3 Extension of the LCAO Method for Nonzero Overlap

#### 15 Solids: Conductors, Semiconductors, Insulators

- OS15.1 Review Quiz
- OS15.2 Floquet's Theorem: Mathematical Study of the Band Structure for an Arbitrary Periodic Potential V(x)
- OS15.3 Compressibility of Condensed Matter: The Bulk Modulus
- OS15.4 The Pauli Principle and Gravitational Collapse: The Chandrasekhar Limit

## 16 Matter and Light: The Interaction of Atoms with Electromagnetic Radiation

- OS16.1 Review Quiz
- OS16.2 Resonance Transitions Beyond Fermi's Rule: Rabi Oscillations
- OS16.3 Resonance Transitions at Radio Frequencies: Nuclear Magnetic Resonance (NMR)

Appendix 519 Bibliography 523 Index 527
