Foreword by Michael F. A'Hearn	<i>XIII</i>
Foreword by Gerhard H. Schwehm	<i>XVII</i>
Preface	<i>XXI</i>
List of Abbreviations and Symbols	<i>XXV</i>

Part I: Comets and their Origin 1

1	Introduction	3
1.1	Preliminary Remarks	3
1.2	Motivation to Land a Probe on a Cometary Nucleus	3
1.3	Introduction to the Physical Characteristics of Comets	5
1.3.1	Physical Characteristics of Comets	5
1.3.1.1	The Cometary Nucleus	5
1.3.1.2	The Cometary Coma	7
1.3.1.3	The Cometary Plasma Tail	8
1.3.1.4	The Cometary Dust Tail	9
1.3.1.5	Cometary Material Loss and Brightness	10
1.3.1.6	Comet Fragmentation and Meteor Showers	11
1.3.1.7	Sungrazers	15
1.3.1.8	Comets and Asteroids	17
1.3.1.9	Exocomets	17
1.3.2	Oort Cloud and Kuiper Belt Comets	18
1.3.2.1	The Discovery of Comets' Periodicity	18
1.3.2.2	Periodic and Nonperiodic Comets	18
1.3.2.3	Long-Period Comets and the Oort Cloud	19
1.3.2.4	Short-Period Comets and the Kuiper Belt	19
1.3.2.5	Jupiter-Family Comets and Halley-Type Comets	20
1.3.2.6	Where Did the Oort Cloud and Kuiper Belt Comets Originate?	21
1.3.3	Nomenclature of Comets and Orbital Elements	22
1.4	Space Probes Vega, Sakigake, and Susei: Observations of Comet 1P/Halley	23
1.4.1	The Vega Mission to Comet 1P/Halley	25
1.4.1.1	Physical and Chemical Properties of Cometary Dust	26

- 1.4.1.2 Vega's Infrared Investigations and the Temperature of the Cometary Nucleus 29
- 1.4.1.3 Vega's Analyses of Cometary Dust 30
- 1.4.1.4 Solar Wind-Cometary Ion Interaction: the Plasma Tail 30
- 1.4.1.5 Bow Shock, Cometopause, and Contact Surface 31
- 1.4.1.6 Plasma Tail Disconnection Events 33
- 1.4.2 The Japanese Spacecraft Suisei and the Cometary Hydrogen Corona 35
- 1.4.3 The Japanese Spacecraft Sakigake 36
- 1.5 The Giotto Spacecraft and the First Image of a Cometary Nucleus 36
 - 1.5.1 The Passage through a Cometary Coma 37
 - 1.5.2 Imaging a Cometary Nucleus 40
 - 1.5.2.1 Topographic Structures on a Cometary Nucleus 41
 - 1.5.2.2 The Albedo of the Cometary Nucleus 43
 - 1.5.2.3 Gas- and Dust-Emitting Areas on the Nucleus of 1P/Halley 43
 - 1.5.2.4 The Formation of the Nonspherical Nucleus of 1P/Halley 44
 - 1.5.3 The Chemical Composition of Cometary Dust 45
 - 1.5.4 The Radio Science Experiment and Cometary Ionosphere 46
 - 1.5.5 Overview, Summary, and Current Status 47
- 1.6 Comet 19P/Borrelly as Observed by Deep Space 1 and the Contour Comet Nucleus Tour 49
 - 1.6.1 The Deep Space 1 Spacecraft Accelerated by Ion Propulsion 49
 - 1.6.2 Encounter, Nucleus Images, and Properties of Comet 19P/Borrelly 50
 - 1.6.3 The Cometary Nucleus Probe CONTOUR 53
- 1.7 The Stardust Sample Return Mission to Comet 81P/Wild 54
 - 1.7.1 Conceptional Remarks 54
 - 1.7.2 Encounter with Comet 81P/Wild 2 and Sample Collection 55
 - 1.7.3 The Hot Origin of Selected Cometary Grains Provides Evidence for Radial Mixing of the Solar Nebula 58
 - 1.7.4 Isotopic Analyses of Returned Wild 2 Samples 61
 - 1.7.5 Infrared Analyses of Returned Wild 2 Samples: Hints at Aliphatic Hydrocarbons 62
 - 1.7.6 Organic Molecules, PAHs, and an Amino Acid in Returned Wild 2 Samples 62
 - 1.7.7 Hoodoos and the Surface Morphology of the Wild 2 Nucleus 65
 - 1.7.8 Chemical Composition and *In Situ* Analyses of Wild 2 Dust Particles 67
 - 1.7.9 Gas and Dust Jets Emitted by the Wild 2 Nucleus 68
- 1.8 The Deep Impact Mission's Excavation of Comet 9P/Tempel 1 69
 - 1.8.1 Observations of Comet 9P/Tempel Prior to the Impact 70
 - 1.8.2 Postimpact Observations of Comet 9P/Tempel 73
 - 1.8.3 Postimpact Observations of Comet 9P/Tempel by Stardust-NExT: Impact Site and the Actively Eroding Scarp 77

1.8.4	The Encounter of the Deep Impact Spacecraft with Comet 103P/Hartley	80
	References	83
2	The Formation of Comets	97
2.1	Introduction	97
2.2	Whipple's Dirty Snowball Model of Cometary Nuclei	98
2.2.1	The Icy-Conglomerate Cometary Nucleus	99
2.2.2	The Icy-Conglomerate Model as Observed Today	100
2.3	Formation and Collection of Interplanetary Dust Particles or Brownlee Particles	101
2.3.1	Classification and Origin of Interplanetary Dust Particles	101
2.3.2	Cometary Dust Characterized by the Stardust Mission	102
2.4	The Greenberg Core-Mantle Grain Model	102
2.4.1	The Formation of Silicate Grain Condensation Nuclei	103
2.4.2	Condensation of the Molecules That Form the Inner and Outer Mantles	103
2.4.3	Aggregation, Cometesimals, and Comet Formation	104
2.4.4	The Greenberg Chemical Composition of Cometary Nuclei	105
2.4.5	The Core-Mantle Grain Model in the View of Cometary Observations	106
2.5	Remote Photometric and Spectroscopic Characterization of Comets	108
2.5.1	The Photometric Characterization of Comets	109
2.5.2	Ultraviolet Spectrophotometry of Comets	109
2.5.3	Cometary Emission in the X-Ray and Extreme Ultraviolet	111
2.5.4	Infrared Spectroscopy of Cometary Volatiles	112
2.5.5	Radio Spectroscopy of Cometary Volatiles	113
2.5.6	Extended Sources of Volatiles in Cometary Comae	114
2.5.7	Chemical Reactions in Cometary Coma	116
2.5.8	Nuclear Spin Species, Ortho-Para Ratios, and the Spin Temperature of Comets	117
2.5.9	Remote Observations of Isotopes in Comets	118
2.5.9.1	Remote Isotopologue Observations of Diatomic Carbon (C ₂)	119
2.5.9.2	Radio Observations of the ¹² C/ ¹³ C Ratio in CN and HCN	119
2.5.9.3	Stardust and Giotto Carbon Isotope Analyses in Cometary Mineral Grains	120
2.5.9.4	Remote and <i>In Situ</i> Nitrogen Isotope Analyses	120
2.5.9.5	Remote and <i>In Situ</i> Sulfur and Neon Isotope Analyses	121
2.5.9.6	What Can We Learn from Cometary Isotope Analyses?	122
2.5.10	Conclusions about Remote Observations of Comets	122
	References	123

3	Astrochemistry: Water and Organic Molecules in Comets	133
3.1	Water in Cometary Ices	133
3.1.1	The Origin of Terrestrial Water: Isotopic Fingerprinting	133
3.1.1.1	The D/H Ratio in Comets	133
3.1.1.2	The $^{18}\text{O}/^{16}\text{O}$ Ratio in Comets	135
3.1.2	Liquid Water in Cometary Nuclei	136
3.2	Artificial Comets: Organic Molecules Identified in Simulated Interstellar Ices	137
3.3	Amino Acids in Simulated Interstellar Ices	142
3.3.1	Amino Acids in Hydrolyzed Refractory Residues	143
3.3.2	Hydrolysis of Refractory Ices	145
3.3.3	Diamino Acids in Hydrolyzed Refractory Residues	145
3.3.4	Amino Acids and Diamino Acids in Meteorites	147
3.3.5	Amino Acids from Remote Observations of Cometary Comae	148
3.4	The Intended Detection of Organic Molecules in a Cometary Nucleus	148
3.5	The Behavior of Organic Molecules During Cometary Impact	150
3.6	The Origin of Life on Earth	151
	References	153
4	The Asymmetry of Life	163
4.1	Introduction	163
4.2	The Photochemical Formation of Chiral Organic Molecules	165
4.2.1	Absolute Asymmetric Photolysis	167
4.2.2	Absolute Asymmetric Amino Acid Synthesis	174
4.3	Enantiomeric Excesses in Meteoritic Molecules	176
4.4	Symmetry Breaking by the Weak Nuclear Interaction	179
4.5	Enantioselective Instruments on the Mars Science Laboratory and ExoMars	181
	References	181
	Part II: The Rosetta Mission-Rendezvous with a Comet	189
5	The Rosetta Cometary Mission: Launch and Target Comet	191
5.1	Introduction	191
5.2	Launch Countdown in 2002 and the Targeting of Comet 46P/Wirtanen	194
5.3	The Successful Rosetta Launch with an Ariane 5G+ Rocket in 2004	196
5.4	Characterization of Target Comet 67P/Churyumov-Gerasimenko	197
