

# CONTENTS

<b>Preface</b> .....	V	<b>5</b>	<b>STATIC RELATIONSHIPS</b> .....	43
<b>I INTRODUCTION</b>		5.1	Force systems and equilibrium .....	43
<b>1 THE PURPOSE AND SCOPE OF THEORY OF STRUCTURES</b> .....	1	5.1.1	Terminology .....	43
1.1 General .....	1	5.1.2	Force systems .....	44
1.2 The basis of theory of structures .....	1	5.1.3	Equilibrium .....	45
1.3 Methods of theory of structures .....	2	5.1.4	Overall stability .....	45
1.4 Statics and structural dynamics .....	3	5.1.5	Supports .....	47
1.5 Theory of structures and structural engineering .....	3	5.1.6	Hinges .....	50
<b>2 BRIEF HISTORICAL BACKGROUND</b> .....	5	5.1.7	Stress resultants .....	51
<b>II FUNDAMENTALS</b>		5.2	Stresses .....	53
<b>3 DESIGN OF STRUCTURES</b> .....	11	5.2.1	Terminology .....	53
3.1 General .....	11	5.2.2	Uniaxial stress state .....	53
3.2 Conceptual design .....	11	5.2.3	Coplanar stress states .....	54
3.3 Service criteria agreement and basis of design .....	14	5.2.4	Three-dimensional stress states .....	57
3.4 Summary .....	26	5.3	Differential structural elements .....	61
3.5 Exercises .....	27	5.3.1	Straight bars .....	61
<b>4 STRUCTURAL ANALYSIS AND DIMENSIONING</b> .....	29	5.3.2	Bars in single curvature .....	62
4.1 General .....	29	5.4	Summary .....	68
4.2 Actions .....	29	5.5	Exercises .....	69
4.2.1 Actions and action effects .....	29	<b>6</b>	<b>KINEMATIC RELATIONSHIPS</b> .....	71
4.2.2 Models of actions and representative values .....	30	6.1	Terminology .....	71
4.3 Structural models .....	31	6.2	Coplanar deformation .....	72
4.4 Limit states .....	31	6.3	Three-dimensional deformation state .....	74
4.5 Design situations and load cases .....	32	6.4	Summary .....	76
4.6 Verifications .....	33	6.5	Exercises .....	77
4.6.1 Verification concept .....	33	<b>7</b>	<b>CONSTITUTIVE RELATIONSHIPS</b> .....	79
4.6.2 Design values .....	33	7.1	Terminology .....	79
4.6.3 Verification of structural safety .....	34	7.2	Linear elastic behaviour .....	81
4.6.4 Verification of serviceability .....	35	7.3	Perfectly plastic behaviour .....	83
4.7 Commentary .....	35	7.3.1	Uniaxial stress state .....	83
4.8 Recommendations for the structural calculations .....	36	7.3.2	Three-dimensional stress states .....	84
4.9 Recommendations for the technical report .....	38	7.3.3	Yield conditions .....	85
4.10 Summary .....	40	7.4	Time-dependent behaviour .....	90
4.11 Exercises .....	41	7.4.1	Shrinkage .....	90
		7.4.2	Creep and relaxation .....	91
		7.5	Thermal deformations .....	94
		7.6	Fatigue .....	94
		7.6.1	General .....	94
		7.6.2	S-N curves .....	95
		7.6.3	Damage accumulation under fatigue loads .....	96
		7.7	Summary .....	98
		7.8	Exercises .....	99

<b>8</b>	<b>ENERGY METHODS</b> .....	101	<b>11</b>	<b>STRESS RESULTANTS AND STATE DIAGRAMS</b> .....	159
8.1	Introductory example .....	101	11.1	General .....	159
8.1.1	Statically determinate system .....	101	11.2	Hinged frameworks .....	160
8.1.2	Statically indeterminate system .....	103	11.2.1	Hinged girders .....	161
8.1.3	Work equation .....	104	11.2.2	Hinged arches and frames .....	163
8.1.4	Commentary .....	105	11.2.3	Stiffened beams with intermediate hinges .....	165
8.2	Variables and operators .....	105	11.3	Trusses .....	166
8.2.1	Introduction .....	105	11.3.1	Prerequisites and structural topology .....	166
8.2.2	Plane framed structures .....	107	11.3.2	Methods of calculation .....	169
8.2.3	Spatial framed structures .....	109	11.3.3	Joint equilibrium .....	169
8.2.4	Coplanar stress states .....	110	11.3.4	CREMONA diagram .....	171
8.2.5	Coplanar strain state .....	111	11.3.5	RITTER method of sections .....	172
8.2.6	Slabs .....	111	11.3.6	The kinematic method .....	173
8.2.7	Three-dimensional continua .....	113	11.4	Summary .....	174
8.2.8	Commentary .....	114	11.5	Exercises .....	175
8.3	The principle of virtual work .....	115	<b>12</b>	<b>INFLUENCE LINES</b> .....	177
8.3.1	Virtual force and deformation variables .....	115	12.1	General .....	177
8.3.2	The principle of virtual deformations .....	115	12.2	Determining influence lines by means of equilibrium conditions .....	178
8.3.3	The principle of virtual forces .....	115	12.3	Kinematic determination of influence lines .....	179
8.3.4	Commentary .....	116	12.4	Summary .....	183
8.4	Elastic systems .....	118	12.5	Exercises .....	183
8.4.1	Hyperelastic materials .....	118	<b>13</b>	<b>ELEMENTARY DEFORMATIONS</b> .....	185
8.4.2	Conservative systems .....	119	13.1	General .....	185
8.4.3	Linear elastic systems .....	125	13.2	Bending and normal force .....	185
8.5	Approximation methods .....	128	13.2.1	Stresses and strains .....	185
8.5.1	Introduction .....	128	13.2.2	Principal axes .....	187
8.5.2	The RITZ method .....	129	13.2.3	Stress calculation .....	189
8.5.3	The GALERKIN method .....	132	13.2.4	Composite cross-sections .....	190
8.6	Summary .....	134	13.2.5	Thermal deformations .....	192
8.7	Exercises .....	135	13.2.6	Planar bending of curved bars .....	193
			13.2.7	Practical advice .....	194
			13.3	Shear forces .....	194
			13.3.1	Approximation for prismatic bars subjected to pure bending .....	194
			13.3.2	Approximate coplanar stress state .....	196
			13.3.3	Thin-wall cross-sections .....	197
			13.3.4	Shear centre .....	199
			13.4	Torsion .....	200
			13.4.1	Circular cross-sections .....	200
			13.4.2	General cross-sections .....	201
			13.4.3	Thin-wall hollow cross-sections .....	204
			13.4.4	Warping torsion .....	207
			13.5	Summary .....	216
			13.6	Exercises .....	218
			<b>14</b>	<b>SINGLE DEFORMATIONS</b> .....	221
			14.1	General .....	221
			14.2	The work theorem .....	222
			14.2.1	Introductory example .....	222
			14.2.2	General formulation .....	223
			14.2.3	Calculating the passive work integrals .....	223
			14.2.4	Systematic procedure .....	226
<b>III LINEAR ANALYSIS OF FRAMED STRUCTURES</b>					
<b>9</b>	<b>STRUCTURAL ELEMENTS AND TOPOLOGY</b> .....	137			
9.1	General .....	137			
9.2	Modelling of structures .....	137			
9.3	Discretised structural models .....	140			
9.3.1	Description of the static system .....	140			
9.3.2	Joint equilibrium .....	141			
9.3.3	Static determinacy .....	142			
9.3.4	Kinematic derivation of the equilibrium matrix .....	144			
9.4	Summary .....	147			
9.5	Exercises .....	147			
<b>10</b>	<b>DETERMINING THE FORCES</b> .....	149			
10.1	General .....	149			
10.2	Investigating selected free bodies .....	150			
10.3	Joint equilibrium .....	154			
10.4	The kinematic method .....	156			
10.5	Summary .....	158			
10.6	Exercises .....	158			

14.3	Applications .....	226	17.3.2	Rotational transformation .....	285
14.4	MAXWELL's theorem .....	230	17.3.3	Algorithm for the direct stiffness method .....	286
14.5	Summary .....	231	17.4	The slope-deflection method .....	290
14.6	Exercises .....	231	17.4.1	General .....	290
<b>15</b>	<b>DEFORMATION DIAGRAMS</b> .....	<b>233</b>	17.4.2	Basic states and member end moments .....	292
15.1	General .....	233	17.4.3	Equilibrium conditions .....	293
15.2	Differential equations for straight bar elements .....	233	17.4.4	Applications .....	294
15.2.1	In-plane loading .....	233	17.4.5	Restraints .....	298
15.2.2	General loading .....	235	17.4.6	Influence lines .....	303
15.2.3	The effect of shear forces .....	235	17.4.7	CROSS method of moment distribution .....	305
15.2.4	Creep, shrinkage and thermal deformations .....	235	17.5	Summary .....	309
15.2.5	Curved bar axes .....	235	17.6	Exercises .....	310
15.3	Integration methods .....	236	<b>18</b>	<b>CONTINUOUS MODELS</b> .....	<b>311</b>
15.3.1	Analytical integration .....	236	18.1	General .....	311
15.3.2	MOHR's analogy .....	238	18.2	Bar extension .....	311
15.5	Exercises .....	243	18.2.1	Practical examples .....	311
<b>16</b>	<b>THE FORCE METHOD</b> .....	<b>245</b>	18.2.2	Analytical model .....	312
16.1	General .....	245	18.2.3	Residual stresses .....	314
16.2	Structural behaviour of statically indeterminate systems .....	245	18.2.4	Restraints .....	315
16.2.1	Overview .....	245	18.2.5	Bond .....	316
16.2.2	Statically determinate system .....	246	18.2.6	Summary .....	320
16.2.3	System with one degree of static indeterminacy .....	247	18.3	Beams in shear .....	321
16.2.4	System with two degrees of static indeterminacy .....	249	18.3.1	Practical examples .....	321
16.2.5	In-depth analysis of system with one degree of static indeterminacy .....	250	18.3.2	Analytical model .....	321
16.2.6	In-depth analysis of system with two degrees of static indeterminacy .....	253	18.3.3	Multi-storey frame .....	321
16.3	Classic presentation of the force method .....	254	18.3.4	VIERENDEEL girder .....	323
16.3.1	General procedure .....	254	18.3.5	Sandwich panels .....	324
16.3.2	Commentary .....	255	18.3.6	Summary .....	326
16.3.3	Deformations .....	257	18.4	Beams in bending .....	326
16.3.4	Influence lines .....	259	18.4.1	General .....	326
16.4	Applications .....	262	18.4.2	Analytical model .....	327
16.5	Summary .....	272	18.4.3	Restraints .....	327
16.6	Exercises .....	274	18.4.4	Elastic foundation .....	329
<b>17</b>	<b>THE DISPLACEMENT METHOD</b> .....	<b>277</b>	18.4.5	Summary .....	332
17.1	Independent bar end variables .....	277	18.5	Combined shear and bending response .....	333
17.1.1	General .....	277	18.5.1	General .....	333
17.1.2	Member stiffness relationship .....	277	18.5.2	Shear wall - frame systems .....	334
17.1.3	Actions on bars .....	278	18.5.3	Shear wall connection .....	338
17.1.4	Algorithm for the displacement method .....	280	18.5.4	Dowelled beams .....	342
17.2	Complete bar end variables .....	281	18.5.5	Summary .....	344
17.2.1	General .....	281	18.6	Arches .....	345
17.2.2	Member stiffness relationship .....	282	18.6.1	General .....	345
17.2.3	Actions on bars .....	283	18.6.2	Analytical model .....	345
17.2.4	Support force variables .....	283	18.6.3	Applications .....	346
17.3	The direct stiffness method .....	284	18.6.4	Summary .....	350
17.3.1	Incidence transformation .....	284	18.7	Annular structures .....	350
			18.7.1	General .....	350
			18.7.2	Analytical model .....	351
			18.7.3	Applications .....	352
			18.7.4	Edge disturbances in cylindrical shells .....	353
			18.7.5	Summary .....	354
			18.8	Cables .....	354
			18.8.1	General .....	354
			18.8.2	Analytical model .....	355
			18.8.3	Inextensible cables .....	357

18.8.4 Extensible cables ..... 358  
 18.8.5 Axial stiffness of laterally loaded cables ..... 360  
 18.8.6 Summary ..... 360  
 18.9 Combined cable-type and bending response ..... 361  
 18.9.1 Analytical model ..... 361  
 18.9.2 Bending-resistant ties ..... 362  
 18.9.3 Suspended roofs and stress ribbons ..... 363  
 18.9.4 Suspension bridges ..... 368  
 18.9.5 Summary ..... 368  
 18.10 Exercises ..... 369

**19 DISCRETISED MODELS ..... 371**

19.1 General ..... 371  
 19.2 The force method ..... 372  
 19.2.1 Complete and global bar end forces ..... 372  
 19.2.2 Member flexibility relation ..... 372  
 19.2.3 Actions on bars ..... 374  
 19.2.4 Algorithm for the force method ..... 374  
 19.2.5 Comparison with the classic force method ..... 376  
 19.2.6 Practical application ..... 376  
 19.2.7 Reduced degrees of freedom ..... 376  
 19.2.8 Supplementary remarks ..... 379  
 19.3 Introduction to the finite element method ..... 381  
 19.3.1 Basic concepts ..... 381  
 19.3.2 Element matrices ..... 381  
 19.3.3 Bar element rigid in shear ..... 381  
 19.3.4 Shape functions ..... 385  
 19.3.5 Commentary ..... 386  
 19.4 Summary ..... 386  
 19.5 Exercises ..... 387

**IV NON-LINEAR ANALYSIS OF FRAMED STRUCTURES**

**20 ELASTIC-PLASTIC SYSTEMS ..... 389**

20.1 General ..... 389  
 20.2 Truss with one degree of static indeterminacy ..... 389  
 20.2.1 Single-parameter loading ..... 389  
 20.2.2 Dual-parameter loading and generalisation ..... 395  
 20.3 Beams in bending ..... 398  
 20.3.1 Moment-curvature diagrams ..... 398  
 20.3.2 Simply supported beams ..... 399  
 20.3.3 Continuous beams ..... 403  
 20.3.4 Frames ..... 404  
 20.3.5 Commentary ..... 405  
 20.4 Summary ..... 406  
 20.5 Exercises ..... 407

**21 LIMIT ANALYSIS ..... 409**

21.1 General ..... 409  
 21.2 Upper- and lower-bound theorems ..... 410  
 21.2.1 Basic concepts ..... 410  
 21.2.2 Lower-bound theorem ..... 410  
 21.2.3 Upper-bound theorem ..... 411  
 21.2.4 Compatibility theorem ..... 411

21.2.5 Consequences of the upper- and lower-bound theorems ..... 411  
 21.3 Static and kinematic methods ..... 412  
 21.3.1 General ..... 412  
 21.3.2 Simply supported beams ..... 413  
 21.3.3 Continuous beams ..... 415  
 21.3.4 Plane frames ..... 416  
 21.3.5 Plane frames subjected to transverse loads ..... 421  
 21.4 Plastic strength of materials ..... 426  
 21.4.1 General ..... 426  
 21.4.2 Skew bending ..... 426  
 21.4.3 Bending and normal force ..... 428  
 21.4.4 Bending and torsion ..... 432  
 21.4.5 Bending and shear force ..... 434  
 21.5 Shakedown and limit loads ..... 435  
 21.6 Dimensioning for minimum weight ..... 437  
 21.6.1 General ..... 437  
 21.6.2 Linear objective function ..... 438  
 21.6.3 FOULKES mechanisms ..... 438  
 21.6.4 Commentary ..... 440  
 21.7 Numerical methods ..... 441  
 21.7.1 The force method ..... 441  
 21.7.2 Limit load program ..... 442  
 21.7.3 Optimum design ..... 444  
 21.8 Summary ..... 446  
 21.9 Exercises ..... 447

**22 STABILITY ..... 449**

22.1 General ..... 449  
 22.2 Elastic buckling ..... 449  
 22.2.1 Column deflection curve ..... 449  
 22.2.2 Bifurcation problems ..... 453  
 22.2.3 Approximation methods ..... 454  
 22.2.4 Further considerations ..... 460  
 22.2.5 Slope-deflection method ..... 465  
 22.2.6 Stiffness matrices ..... 469  
 22.3 Elastic-plastic buckling ..... 471  
 22.3.1 Centrically loaded columns ..... 471  
 22.3.2 Eccentrically loaded columns ..... 474  
 22.3.3 Limit loads of frames according to second-order theory ..... 477  
 22.4 Flexural-torsional buckling and lateral buckling ..... 480  
 22.4.1 Basic concepts ..... 480  
 22.4.2 Centric loading ..... 482  
 22.4.3 Eccentric loading in the strong plane ..... 483  
 22.4.4 General loading ..... 485  
 22.5 Summary ..... 488  
 22.6 Exercises ..... 489

**V PLATES AND SHELLS**

**23 PLATES ..... 491**

23.1 General ..... 491  
 23.2 Elastic plates ..... 491  
 23.2.1 Stress function ..... 491

23.2.2	Polar coordinates .....	493	25.2.1	Sawtooth roofs .....	588
23.2.3	Approximating functions for displacement components .....	496	25.2.2	Barrel vaults .....	589
23.3	Reinforced concrete plate elements .....	496	25.2.3	Commentary .....	593
23.3.1	Orthogonal reinforcement .....	496	25.3	Non-prismatic folded plates .....	594
23.3.2	General reinforcement .....	500	25.4	Summary .....	594
23.4	Static method .....	501	25.5	Exercises .....	594
23.4.1	General .....	501	<b>26</b>	<b>SHELLS</b> .....	595
23.4.2	Truss models .....	501	26.1	General .....	595
23.4.3	Discontinuous stress fields .....	505	26.2	Membrane theory for surfaces of revolution .....	596
23.4.4	Stringer-panel model .....	511	26.2.1	Symmetrical loading .....	596
23.5	Kinematic method .....	512	26.2.2	Asymmetric loading .....	600
23.5.1	Applications in reinforced concrete .....	512	26.3	Membrane theory for cylindrical shells .....	601
23.5.2	Applications in geotechnical engineering .....	517	26.3.1	General relationships .....	601
23.6	Summary .....	520	26.3.2	Pipes and barrel vaults .....	602
23.7	Exercises .....	522	26.3.3	Polygonal domes .....	604
<b>24</b>	<b>SLABS</b> .....	525	26.4	Membrane forces in shells of any form .....	606
24.1	Basic concepts .....	525	26.4.1	Equilibrium conditions .....	606
24.1.1	General .....	525	26.4.2	Elliptical problems .....	607
24.1.2	Static relationships .....	525	26.4.3	Hyperbolic problems .....	608
24.1.3	Kinematic relationships .....	531	26.5	Bending theory for rotationally symmetric cylindrical shells .....	613
24.2	Linear elastic slabs rigid in shear with small deflections .....	533	26.6	Bending theory for shallow shells .....	615
24.2.1	Fundamental relationships .....	533	26.6.1	Basic concepts .....	615
24.2.2	Methods of solution .....	535	26.6.2	Differential equation for deflection .....	616
24.2.3	Rotationally symmetric problems .....	536	26.6.3	Circular cylindrical shells subjected to asymmetric loading .....	617
24.2.4	Rectangular slabs .....	539	26.7	Bending theory for symmetrically loaded surfaces of revolution .....	620
24.2.5	Flat slabs .....	543	26.7.1	Basic concepts .....	620
24.2.6	Energy methods .....	546	26.7.2	Differential equation for deflection .....	620
24.3	Yield conditions .....	547	26.7.3	Spherical shells .....	621
24.3.1	VON MISES and TRESCA yield conditions .....	547	26.7.4	Approximation for shells of any form .....	623
24.3.2	Reinforced concrete slabs .....	550	26.8	Stability .....	623
24.4	Static method .....	557	26.8.1	General .....	623
24.4.1	Rotationally symmetric problems .....	557	26.8.2	Bifurcation loads .....	624
24.4.2	Moment fields for rectangular slabs .....	560	26.8.3	Commentary .....	626
24.4.3	Strip method .....	563	26.9	Summary .....	627
24.5	Kinematic method .....	567	26.10	Exercises .....	628
24.5.1	Introductory example .....	567			
24.5.2	Calculating the dissipation work .....	568	<b>APPENDIX</b>		
24.5.3	Applications .....	569	<b>A1</b>	<b>DEFINITIONS</b> .....	631
24.6	The influence of shear forces .....	572	<b>A2</b>	<b>NOTATION</b> .....	637
24.6.1	Elastic slabs .....	572	<b>A3</b>	<b>PROPERTIES OF MATERIALS</b> .....	643
24.6.2	Rotationally symmetric VON MISES slabs .....	574	<b>A4</b>	<b>GEOMETRICAL PROPERTIES OF SECTIONS</b> .....	645
24.6.3	Reinforced concrete slabs .....	575	<b>A5</b>	<b>MATRIX ALGEBRA</b> .....	649
24.7	Membrane action .....	575	A5.1	Terminology .....	649
24.7.1	Elastic slabs .....	575	A5.2	Algorithms .....	650
24.7.2	Perfectly plastic slab strip .....	577	A5.3	Linear equations .....	652
24.7.3	Reinforced concrete slabs .....	578	A5.4	Quadratic forms .....	652
24.8	Summary .....	581	A5.5	Eigenvalue problems .....	653
24.9	Exercises .....	583	A5.6	Matrix norms and condition numbers .....	654
<b>25</b>	<b>FOLDED PLATES</b> .....	587			
25.1	General .....	587			
25.2	Prismatic folded plates .....	588			

**A6 TENSOR CALCULUS** ..... 655

A6.1 Introduction ..... 655

A6.2 Terminology ..... 655

A6.3 Vectors and tensors ..... 656

A6.4 Principal axes of symmetric second-order tensors ..... 658

A6.5 Tensor fields and integral theorems ..... 658

**A7 CALCULUS OF VARIATIONS** ..... 661

A7.1 Extreme values of continuous functions ..... 661

A7.2 Terminology ..... 661

A7.3 The simplest problem of calculus of variations ..... 662

A7.4 Second variation ..... 663

A7.5 Several functions required ..... 664

A7.6 Higher-order derivatives ..... 664

A7.7 Several independent variables ..... 665

A7.8 Variational problems with side conditions ..... 665

A7.9 The RITZ method ..... 666

A7.10 Natural boundary conditions ..... 667

**REFERENCES** ..... 669

**NAME INDEX** ..... 671

**SUBJECT INDEX** ..... 673

**EXAMPLECOLLECTION**

<b>Example 3.1</b>	Service criteria agreement for industrial building XY in Z .....	15
<b>Example 3.2</b>	Basis of design for industrial building XY in Z .....	19
<b>Example 5.1</b>	Cantilever retaining wall .....	45
<b>Example 5.2</b>	Support envelope .....	47
<b>Example 5.3</b>	Steel plate .....	56
<b>Example 5.4</b>	Stress tensor .....	59
<b>Example 5.5</b>	Hoop stress formula .....	63
<b>Example 5.6</b>	Thrust line .....	63
<b>Example 5.7</b>	Three-hinged arch .....	65
<b>Example 5.8</b>	Beam as circular arc .....	67
<b>Example 6.1</b>	Measuring grid .....	73
<b>Example 7.1</b>	Time-independent restraint .....	93
<b>Example 7.2</b>	Time-dependent restraint .....	93
<b>Example 7.3</b>	Prestressing .....	93
<b>Example 7.4</b>	Loss of prestress .....	93
<b>Example 7.5</b>	Fatigue of reinforcing steel .....	97
<b>Example 8.1</b>	Determining internal force variables .....	116
<b>Example 8.2</b>	Determining external deformation variables .....	116
<b>Example 8.3</b>	Geometric and material non-linearity .....	117
<b>Example 8.4</b>	Tie .....	119
<b>Example 8.5</b>	Beam with one degree of static indeterminacy .....	121
<b>Example 8.6</b>	Geometric non-linearity .....	122
<b>Example 8.7</b>	Cantilever beam .....	122
<b>Example 8.8</b>	Cantilever beam .....	124
<b>Example 8.9</b>	Calibration ring .....	124
<b>Example 8.10</b>	Simply supported beam .....	126
<b>Example 8.11</b>	Simply supported beam .....	128
<b>Example 8.12</b>	Tie .....	129
<b>Example 8.13</b>	Cantilever beam .....	130
<b>Example 8.14</b>	Ideal cantilever column .....	130
<b>Example 8.15</b>	Cantilever beam column .....	131
<b>Example 8.16</b>	Simply supported beam column .....	133
<b>Example 10.1</b>	Plane truss .....	152
<b>Example 10.2</b>	Plane frame .....	153
<b>Example 10.3</b>	Plane truss .....	154
<b>Example 10.4</b>	Plane frame .....	154
<b>Example 10.5</b>	Three-hinged arch .....	156
<b>Example 10.6</b>	Plane frame .....	157
<b>Example 11.1</b>	Hinged girder .....	162
<b>Example 11.2</b>	Three-hinged frame with tie .....	164
<b>Example 11.3</b>	Plane truss .....	169
<b>Example 11.4</b>	Plane truss .....	171
<b>Example 11.5</b>	Plane truss .....	172
<b>Example 11.6</b>	Plane truss .....	172
<b>Example 12.1</b>	Hinged girder .....	180
<b>Example 12.2</b>	Three-hinged arch .....	180
<b>Example 12.3</b>	Plane truss .....	182
<b>Example 13.1</b>	Unequal leg angle .....	188
<b>Example 13.2</b>	Rectangular cross-section – kern .....	190
<b>Example 13.3</b>	Reinforced concrete slab – bending .....	191
<b>Example 13.4</b>	Reinforced concrete slab – shrinkage .....	192
<b>Example 13.5</b>	Rectangular cross-section – shear stress distribution .....	195
<b>Example 13.6</b>	Wide-flange beam .....	197
<b>Example 13.7</b>	Unequal leg angle .....	198

<b>Example 13.8</b>	Elliptical bar .....	202
<b>Example 13.9</b>	Narrow rectangular cross-section .....	203
<b>Example 13.10</b>	Reinforced concrete box girder .....	205
<b>Example 13.11</b>	Twin-cell box girder .....	206
<b>Example 13.12</b>	Twisted I beam – concentrated load .....	208
<b>Example 13.13</b>	Twisted I beam – distributed load .....	209
<b>Example 13.14</b>	Reinforced concrete beam .....	213
<b>Example 14.1</b>	SIMPSON’s rule .....	225
<b>Example 14.2</b>	Beam with one degree of static indeterminacy .....	226
<b>Example 14.3</b>	Hinged girder .....	227
<b>Example 14.4</b>	Cantilever beam .....	228
<b>Example 14.5</b>	Cranked cantilever beam .....	228
<b>Example 14.6</b>	Plane truss .....	229
<b>Example 14.7</b>	Rectangular cross-section – area shear factor .....	229
<b>Example 14.8</b>	Thin-wall hollow cross-section .....	230
<b>Example 15.1</b>	Simply supported beam .....	236
<b>Example 15.2</b>	Beam fixed at both ends .....	236
<b>Example 15.3</b>	Beam with one degree of static indeterminacy .....	237
<b>Example 15.4</b>	Beam with spring restraint .....	239
<b>Example 15.5</b>	Cantilever beam .....	239
<b>Example 15.6</b>	Beam with one degree of static indeterminacy .....	240
<b>Example 15.7</b>	Hinged girder .....	240
<b>Example 16.1</b>	Plane frame .....	257
<b>Example 16.2</b>	Bar fixed at both ends .....	258
<b>Example 16.3</b>	Beam with one degree of static indeterminacy .....	259
<b>Example 16.4</b>	Continuous beam .....	260
<b>Example 16.5</b>	Beam fixed at both ends .....	262
<b>Example 16.6</b>	Continuous beam of infinite length .....	263
<b>Example 16.7</b>	Continuous beam – support settlement .....	267
<b>Example 16.8</b>	Arch fixed at both ends .....	268
<b>Example 16.9</b>	Beam on skew supports .....	269
<b>Example 16.10</b>	Beam as circular arc .....	270
<b>Example 16.11</b>	Considering subsystems .....	271
<b>Example 17.1</b>	Cantilever beam rigid in shear .....	280
<b>Example 17.2</b>	Cantilever beam rigid in shear .....	283
<b>Example 17.3</b>	Plane frame .....	287
<b>Example 17.4</b>	Non-sway frame .....	294
<b>Example 17.5</b>	Grandstand frame .....	295
<b>Example 17.6</b>	Multi-storey sway frame .....	296
<b>Example 17.7</b>	Multi-storey non-sway frame .....	297
<b>Example 17.8</b>	Non-sway frame – settlement of supports .....	299
<b>Example 17.9</b>	Non-sway frame – uniform rise in temperature .....	299
<b>Example 17.10</b>	Non-sway frame – temperature difference .....	301
<b>Example 17.11</b>	Sway frame – uniform rise in temperature .....	301
<b>Example 17.12</b>	Three-span frame .....	304
<b>Example 17.13</b>	Continuous beam .....	306
<b>Example 18.1</b>	Bar restrained at both ends .....	313
<b>Example 18.2</b>	Bar with spring restraint at one end .....	313
<b>Example 18.3</b>	Reinforced concrete column – change in temperature .....	314
<b>Example 18.4</b>	Reinforced concrete column – shrinkage .....	314
<b>Example 18.5</b>	Pulling out a reinforcing bar .....	317
<b>Example 18.6</b>	Multi-storey frame .....	322
<b>Example 18.7</b>	Externally statically indeterminate VIERENDEEL girder .....	323
<b>Example 18.8</b>	Plastic panel with bonded sheet steel outer faces .....	325
<b>Example 18.9</b>	Simply supported beam – sinusoidal line load .....	327
<b>Example 18.10</b>	Bar fixed at both ends – linear temperature gradient .....	328

<b>Example 18.11</b>	High-rise building .....	335
<b>Example 18.12</b>	High-rise building with outrigger .....	337
<b>Example 18.13</b>	Shear wall .....	340
<b>Example 18.14</b>	Shear wall – influence of wall extensions .....	341
<b>Example 18.15</b>	Two-hinged arch – uniformly distributed load .....	347
<b>Example 18.16</b>	Two-hinged arch – sinusoidal load .....	348
<b>Example 18.17</b>	Two-hinged arch – constant load segment by segment .....	349
<b>Example 18.18</b>	Displacement of the abutments to a concrete arch .....	350
<b>Example 18.19</b>	Stiffened pipe subjected to internal pressure .....	354
<b>Example 18.20</b>	Single strand – uniformly distributed load .....	359
<b>Example 18.21</b>	Single strand – thermal action .....	359
<b>Example 18.22</b>	Single strand – prestress .....	359
<b>Example 18.23</b>	Single strand – constant loads on both halves of the span .....	360
<b>Example 18.24</b>	Cable with wheel load .....	362
<b>Example 18.25</b>	Stresses in stay cable .....	363
<b>Example 18.26</b>	Suspended roof – uniformly distributed load .....	364
<b>Example 18.27</b>	Suspended roof – asymmetric imposed load .....	365
<b>Example 18.28</b>	Stress ribbon – asymmetric imposed load .....	365
<b>Example 18.29</b>	Suspended roof – central point load .....	367
<b>Example 18.30</b>	Stress ribbon – thermal action .....	367
<b>Example 19.1</b>	Plane frame .....	374
<b>Example 19.2</b>	Orthogonalised restraint states .....	379
<b>Example 19.3</b>	Beam with one degree of static indeterminacy .....	384
<b>Example 21.1</b>	Unequal leg angle .....	427
<b>Example 21.2</b>	Two-span beam – repeated variable actions .....	436
<b>Example 21.3</b>	Plane frame .....	442
<b>Example 21.4</b>	Plane frame – static program .....	443
<b>Example 21.5</b>	Plane frame – kinematic program .....	444
<b>Example 21.6</b>	Plane frame – minimum weight .....	445
<b>Example 22.1</b>	Beam column .....	451
<b>Example 22.2</b>	Cantilever column .....	455
<b>Example 22.3</b>	Ideal column .....	455
<b>Example 22.4</b>	Beam column .....	456
<b>Example 22.5</b>	Ideal column .....	456
<b>Example 22.6</b>	Ideal column with one degree of static indeterminacy .....	457
<b>Example 22.7</b>	Column with abrupt change in stiffness .....	458
<b>Example 22.8</b>	Load applied to top of cantilever column .....	458
<b>Example 22.9</b>	Statically determinate frame .....	459
<b>Example 22.10</b>	Elastically supported inclined leg frame .....	463
<b>Example 22.11</b>	Two-hinged frame .....	467
<b>Example 22.12</b>	Non-sway frame .....	468
<b>Example 22.13</b>	Sway frame .....	468
<b>Example 22.14</b>	Elastically restrained vertical cantilever .....	468
<b>Example 22.14</b>	Vertical cantilever .....	477
<b>Example 22.15</b>	Lateral buckling of an I section .....	486
<b>Example 22.16</b>	Lateral buckling – shifting the point of load application .....	486
<b>Example 23.1</b>	Cantilever beam .....	492
<b>Example 23.2</b>	Cylindrical pipe .....	495
<b>Example 23.3</b>	Beam in the form of a circular arc .....	495
<b>Example 23.4</b>	Uniaxial tension .....	498
<b>Example 23.5</b>	Vertical embankment .....	505
<b>Example 23.6</b>	Strip foundation on TRESCA half-space .....	506
<b>Example 23.7</b>	Curtailed reinforcement in tension chord .....	514
<b>Example 23.8</b>	Web crushing failure .....	516
<b>Example 23.9</b>	Dissipation at hyperbolic slip line .....	517
<b>Example 23.10</b>	Strip foundation on TRESCA half-space .....	519

<b>Example 24.1</b>	Square slab supported at the corners .....	528
<b>Example 24.2</b>	Square slab supported in the centre .....	529
<b>Example 24.3</b>	Rectangular slab supported at the corners .....	529
<b>Example 24.4</b>	Simply supported square slab .....	547
<b>Example 24.5</b>	Fixed square slab .....	547
<b>Example 24.6</b>	Simply supported circular slab .....	549
<b>Example 24.7</b>	Fixed circular slab .....	550
<b>Example 24.8</b>	Reinforced concrete slab – dimensioning for bending .....	553
<b>Example 24.9</b>	Slab element subjected to pure twist .....	554
<b>Example 24.10</b>	Fixed circular slab .....	558
<b>Example 24.11</b>	Annular slab fixed at its inner edge and loaded on its outer edge by $m_u$ .....	558
<b>Example 24.12</b>	Simply supported rectangular slab .....	561
<b>Example 24.13</b>	Square slab simply supported along two adjacent edges .....	561
<b>Example 24.14</b>	Simply supported regular polygonal slabs .....	561
<b>Example 24.15</b>	Cantilever slab with point load on edge .....	563
<b>Example 24.16</b>	Fixed rectangular slab .....	569
<b>Example 24.17</b>	Square slab simply supported along two adjacent edges .....	569
<b>Example 24.18</b>	Fixed square slab .....	570
<b>Example 24.19</b>	Slab strip subjected to a central point load .....	570
<b>Example 24.20</b>	Cantilever slab with point load on edge .....	570
<b>Example 24.21</b>	Flat slab .....	571
<b>Example 24.22</b>	Semi-infinite rectangular slab subjected to edge loads .....	573
<b>Example 24.23</b>	Buckling of simply supported rectangular slabs .....	575
<b>Example 24.24</b>	Rectangular slab with initial deformation .....	576
<b>Example 24.25</b>	Square membrane .....	577
<b>Example 25.1</b>	Barrel vault – membrane theory .....	590
<b>Example 25.2</b>	Barrel vault – bending theory .....	591
<b>Example 26.1</b>	Spherical shells .....	597
<b>Example 26.2</b>	Spherical tanks .....	598
<b>Example 26.3</b>	Conical shell .....	598
<b>Example 26.4</b>	Spherical shell – dead load .....	599
<b>Example 26.5</b>	Spherical shell – wind pressure .....	600
<b>Example 26.6</b>	Conical shell – wind pressure .....	601
<b>Example 26.7</b>	Dome with circular cylindrical sectors – self-weight .....	605
<b>Example 26.8</b>	Pipe subjected to end loads .....	613
<b>Example 26.9</b>	Cylindrical tank .....	614
<b>Example 26.10</b>	Pipe subjected to thermal action .....	614
<b>Example 26.11</b>	Chimney subjected to wind pressure .....	618
<b>Example 26.12</b>	Fixed spherical shell subjected to internal pressure .....	622
<b>Example 26.13</b>	Pressure vessel .....	622
<b>Example A7.1</b>	Cantilever beam rigid in shear .....	666
<b>Example A7.2</b>	Cantilever beam – uniformly distributed load plus load at free end .....	667
