3.2.3	Determining the shear strength $c_{\rm u}$ of saturated, undrained cohesive soils 28
3.2.4	Assessing the subsoil for the installation of piles and sheet piles and for selecting
	the installation method 31
3.2.5	Classifying the subsoil in homogeneous zones 34
3.3	Water pressure 35
3.3.1	General 35
3.3.2	Resultant water pressure in the direction of the water side 36
3.3.3	Resultant water pressure on quay walls in front of embankments with elevated
224	platforms in tidal areas 38 Taking account of group durater flow 20
3.3.4	Taking account of groundwater flow 39
3.4	Hydraulic heave failure 45
3.5	Earth pressure 49
3.5.1	General 49
3.5.2	Considering the cohesion in cohesive soils 49
3.5.3	Considering the apparent cohesion (capillary cohesion) in sand 49
3.5.4	Determining active earth pressure for a steep, paved embankment in a partially sloping waterfront structure 49
3.5.5	Determining the active earth pressure shielding on a wall below a relieving
	platform with average ground surcharges 50
3.5.6	Earth pressure distribution under limited loads 52
3.5.7	Determining active earth pressure in saturated, non-consolidated or partially
01017	consolidated, soft cohesive soils 53
3.5.8	Effect of water pressure difference beneath beds of watercourses 56
3.5.9	Considering active earth pressure and resultant water pressure, and construction guidance for waterfront structures with soil replacement and a contaminated or
	disturbed base of excavation 57
3.5.10	Effect of groundwater flow on resultant water pressure and active and passive earth pressures 60
3.5.11	Determining the amount of displacement required to mobilise passive earth pressure in non-cohesive soils 62
2 5 1 2	Measures for increasing the passive earth pressure in front of waterfront
3.5.12	structures 63
3.5.13	Passive earth pressure in front of abrupt changes in ground level in soft cohesive
0 - 1 4	soils with rapid load application on the land side 65
3.5.14	Waterfront structures in seismic regions 65 References 69
4	Loads on waterfront structures 73
4.1	Vessel berthing velocities and pressures 73
4.1.1	Guide values 73
4.1.2	Loads on waterfront structures due to fender reaction forces 74
4.2	Vertical imposed loads 74

4.2.1 General 74

- 4.3.2 Description of the sea state 77
- 4.3.3 Determining the sea state parameters 78
- 4.3.4 Design concepts and specification of design parameters 82
- 4.3.5 Conversion of the sea state 83
- 4.3.6 Wave pressure on vertical quay walls in coastal areas 85
- 4.4 Effects of waves due to ship movements 90
- 4.4.1 General 90
- 4.4.2 Wave heights 91
- 4.5 Choosing a greater design depth (allowance for scouring) 94
- 4.6 Loads arising from surging and receding waves due to the inflow or outflow of water 94
- 4.6.1 General *94*
- 4.6.2 Determining wave values 94
- 4.6.3 Loading assumptions 95
- 4.7 Wave pressure on piled structures *96*
- 4.7.1 General 96
- 4.7.2 Method of calculation according to Morison et al. (1950) 98
- 4.7.3 Determining the wave loads on a single vertical pile 98
- 4.7.4 Coefficients $C_{\rm D}$ and $C_{\rm M}$ 100
- 4.7.5 Forces from breaking waves 100
- 4.7.6 Wave load on a group of piles 101
- 4.7.7 Raking piles 101
- 4.7.8 Safety factors 102
- 4.7.9 Vertical wave load ("wave slamming") 103
- 4.8 Moored ships and their influence on the design of mooring equipment and fenders *106*
- 4.8.1 General *106*
- 4.8.2 Critical wind speed 108
- 4.8.3 Wind loads on moored vessels 108
- 4.8.4 Loads on mooring equipment and fenders 110
- 4.9 Loads on bollards 110
- 4.9.1 Loads on bollards for sea-going vessels 110
- 4.9.2 Loads on bollards for inland waterway vessels 112
- 4.9.3 Direction of line pull load 113
- 4.9.4 Design for line pull loads 113
- 4.10 Quay loads from cranes and other transhipment equipment 113
- 4.10.1 Conventional general cargo cranes 113
- 4.10.2 Container cranes 113
- 4.10.3 Load specifications for port cranes 115
- 4.10.4 Notes 116
- 4.11 Impact and pressure of ice on waterfront structures, fenders and dolphins in coastal areas *116*
- 4.11.1 General 116

5 Earthworks and dredging 131

- 5.1 Dredging in front of quay walls in seaports 131
- 5.2 Dredging and hydraulic fill tolerances 132
- 5.2.1 General 132
- 5.2.2 Dredging tolerances 133
- 5.3 Hydraulic filling of port areas for planned waterfront structures 135
- 5.3.1 General 135
- 5.3.2 Hydraulic filling of port above the water table 136
- 5.3.3 Hydraulic filling of port areas below the water table 137
- 5.4 Backfilling of waterfront structures 139
- 5.4.1 General 139
- 5.4.2 Backfilling in the dry 140
- 5.4.3 Backfilling underwater 140
- 5.4.4 Additional remarks 141
- 5.5 In situ density of hydraulically filled non-cohesive soils 141
- 5.5.1 General 141
- 5.5.2 Empirical values for in situ density 141
- 5.5.3 In situ density required for port areas 142
- 5.5.4 Checking the in situ density 142
- 5.6 In situ density of dumped non-cohesive soils 142
- 5.6.1 General 142
- 5.6.2 Influences on the achievable in situ density 143
- 5.7 Dredging underwater slopes 144
- 5.7.1 General 144
- 5.7.2 Dredging underwater slopes in loose sand 144
- 5.7.3 Dredging equipment 144
- 5.7.4 Execution of dredging work 145
- 5.8 Subsidence of non-cohesive soils 146

- 5.9.2 Dredging 148
- 5.9.3 Cleaning the base of the excavation before filling it with sand 149
- 5.9.4 Placing the sand fill 150
- 5.9.5 Checking the sand fill 150
- 5.10 Dynamic compaction of the soil 151
- 5.11 Vertical drains to accelerate the consolidation of soft cohesive soils 151
- 5.11.1 General 151
- 5.11.2 Applications 152
- 5.11.3 Design 152
- 5.11.4 Design of plastic drains 153
- 5.11.5 Installation 154
- 5.12 Consolidation of soft cohesive soils by preloading 154
- 5.12.1 General 154
- 5.12.2 Applications 154
- 5.12.3 Bearing capacity of in situ soil 155
- 5.12.4 Fill material 156
- 5.12.5 Determining the depth of preload fill 156
- 5.12.6 Minimum extent of preload fill 158
- 5.12.7 Soil improvement through vacuum consolidation with vertical drains 158
- 5.12.8 Execution of soil improvement through vacuum consolidation with vertical drains *159*
- 5.12.9 Checking the consolidation 159
- 5.12.10 Secondary settlement 159
- 5.13 Improving the bearing capacity of soft cohesive soils with vertical elements 160
- 5.13.1 General 160
- 5.13.2 Methods 160
- 5.13.3 Construction of pile-type load-bearing elements *162* References *163*

6 **Protection and stabilisation structures** 165

- 6.1 Bank and bottom protection 165
- 6.1.1 Embankment stabilisation on inland waterways 165
- 6.1.2 Slopes in seaports and tidal inland ports 170
- 6.1.3 Use of geotextile filters in bank and bottom protection 174
- 6.1.4 Scour and protection against scour in front of waterfront structures 176
- 6.1.5 Scour protection at piers and dolphins *185*
- 6.1.6 Installation of mineral impervious linings underwater and their connection to waterfront structures 185
- 6.2 Flood defence walls in seaports 187
- 6.2.1 General 187
- 6.2.2 Critical water levels 187
- 6.2.3 Excess water pressure and unit weight of soil 188
- 6.2.4 Minimum embedment depths for flood defence walls 189
- 6.2.5 Special loads on flood defence walls 189

7 Configuration of cross-sections and equipment for waterfront structures 205

- 7.1 Configuration of cross-sections 205
- 7.1.1 Standard cross-sectional dimensions for waterfront structures in seaports 205
- 7.1.2 Top edges of waterfront structures in seaports 207
- 7.1.3 Standard cross-sections for waterfront structures in inland ports 208
- 7.1.4 Upgrading partially sloped waterfronts in inland ports with large water level fluctuations *212*
- 7.1.5 Design of waterfront areas in inland ports according to operational aspects 214
- 7.1.6 Nominal depth and design depth of the harbour bottom 215
- 7.1.7 Strengthening waterfront structures for deepening harbour bottoms in seaports *217*
- 7.1.8 Embankments below waterfront wall superstructures behind closed sheet pile walls 221
- 7.1.9 Re-design of waterfront structures in inland ports 221
- 7.1.10 Waterfront structures in regions with mining subsidence 224
- 7.2 Equipment 227
- 7.2.1 Provision of quick-release hooks at berths for large vessels 227
- 7.2.2 Layout and design of and loads on access ladders 227
- 7.2.3 Layout and design of stairs in seaports 230
- 7.2.4 Armoured steel sheet pile walls 231
- 7.2.5 Equipment for waterfront structures in seaports with supply and disposal systems 235
- 7.2.6 Layout of bollards 241
- 7.2.7 Foundations to craneways on waterfront structures 243
- 7.2.8 Fixing crane rails to concrete 245
- 7.2.9 Connection of expansion joints seal in reinforced concrete bottoms to load-bearing steel sheet pile walls 251
- 7.2.10 Connection of steel sheet piles to a concrete structure 252
- 7.2.11 Steel capping beams for sheet pile waterfront structures 254
- 7.2.12 Reinforced concrete capping beams for waterfront structures with steel sheet piles 257
