Preface XI

List of Contributors XIII

1	Molecular Chaperones and the Ubiquitin–Proteasome System	1
	<i>Cam Patterson and Jörg Höhfeld</i>	
1.1	Introduction	1
1.2	A Biomedical Perspective	2
1.3	Molecular Chaperones: Mode of Action and Cellular Functions	3
1.3.1	The Hsp70 Family	3
1.3.2	The Hsp90 Family	5
1.3.3	The Small Heat Shock Proteins	7
1.3.4	Chaperonins	8
1.4	Chaperones: Central Players During Protein Quality Control	8
1.5	Chaperones and Protein Degradation	9
1.6	The CHIP Ubiquitin Ligase: A Link Between Folding and Degradation Systems	13
1.7	Other Proteins That May Influence the Balance Between Chaperone-assisted Folding and Degradation	16
1.8	Further Considerations	19
1.9	Conclusions	20
	References	21
2	Molecular Dissection of Autophagy in the Yeast <i>Saccharomyces cerevisiae</i>	31
	<i>Yoshinori Ohsumi</i>	
2.1	Introduction	31
2.2	Vacuoles as a Lytic Compartment in Yeast	32
2.3	Discovery of Autophagy in Yeast	32
2.4	Genetic Dissection of Autophagy	34
2.5	Characterization of Autophagy-defective Mutants	36
2.6	Cloning of ATG Genes	36
2.7	Further Genes Required for Autophagy	37
2.8	Selectivity of Proteins Degraded	37

2.9	Induction of Autophagy	38
2.10	Membrane Dynamics During Autophagy	39
2.11	Monitoring Methods of Autophagy in the Yeast <i>S. cerevisiae</i>	39
2.12	Function of Atg Proteins	40
2.12.1	The Atg12 Protein Conjugation System	42
2.12.2	The Atg8 System	43
2.12.3	The Atg1 Kinase Complex	44
2.12.4	Autophagy-specific PI3 Kinase Complex	45
2.12.5	Other Atg Proteins	45
2.13	Site of Atg Protein Functioning: The Pre-autophagosomal Structure	45
2.14	Atg Proteins in Higher Eukaryotes	46
2.15	Atg Proteins as Markers for Autophagy in Mammalian Cells	47
2.16	Physiological Role of Autophagy in Multicellular Organisms	47
2.17	Perspectives	48
	References	48
3	Dissecting Intracellular Proteolysis Using Small Molecule Inhibitors and Molecular Probes	51
	<i>Huib Ova, Herman S. Overkleef, Benedikt M. Kessler, and Hidde L. Ploegh</i>	
3.1	Introduction	51
3.2	The Proteasome as an Essential Component of Intracellular Proteolysis	54
3.3	Proteasome Structure, Function, and Localization	55
3.4	Proteasome Inhibitors as Tools to Study Proteasome Function	57
3.4.1	Peptide Aldehydes	57
3.4.2	Lactacystin	59
3.4.3	Peptide Epoxyketones	59
3.4.4	Cyclic Peptides	60
3.4.5	Peptide Boronates	60
3.4.6	Peptide Vinyl Sulfones	61
3.4.7	Peptide Vinyl Sulfones as Proteasomal Activity Probes	62
3.4.8	Future Directions in the Development of Inhibitors of the Proteasome's Proteolytic Activities	63
3.5	Assessing the Biological Role of the Proteasome With Inhibitors and Probes	64
3.6	Proteasome-associated Components: The Role of N-glycanase	65
3.7	A Link Between Proteasomal Proteolysis and Deubiquitination	66
3.7.1	Reversal of Ub Modification	66
3.7.2	Ubiquitin-specific Proteases	66
3.7.3	USP Reactive Probes Correlate USP Activity With Proteasomal Proteolysis	67
3.8	Future Developments and Final Remarks	68
	Acknowledgments	68
	Abbreviations	68
	References	69

4	MEKK1: Dual Function as a Protein Kinase and a Ubiquitin Protein Ligase	79
	<i>Zhimin Lu and Tony Hunter</i>	
4.1	Introduction	79
4.2	Types of Protein Kinases	79
4.3	Functions of Protein Kinases	82
4.4	Conclusions	84
	References	84
5	Proteasome Activators	89
	<i>Andreas Förster and Christopher P. Hill</i>	
5.1	Introduction	89
5.1.1	20S Proteasomes	89
5.1.2	The 20S Proteasome Gate	90
5.1.3	Proteasome Activators	93
5.2	11S Activators: Sequence and Structure	94
5.2.1	Amino Acid Sequences	94
5.2.2	Oligomeric State	94
5.2.3	PA28 α Crystal Structure	94
5.2.4	Activation Loop	95
5.2.5	Homologue-specific Inserts	95
5.3	PA26–Proteasome Complex Structures	96
5.3.1	Binding	97
5.3.2	Symmetry Mismatch Mechanism of Gate Opening	98
5.3.3	Open-gate Stabilization by Conserved Proteasome Residues	99
5.3.4	Do Other Activators Induce the Same Open Conformation?	100
5.3.5	Differential Stimulation of Proteasome Peptidase Activities	101
5.3.6	Hybrid Proteasomes	102
5.4	Biological Roles of 11S Activators	103
5.5	PA200/Blm10p	104
5.6	Concluding Remarks and Future Challenges	105
	References	106
6	The Proteasome Portal and Regulation of Proteolysis	111
	<i>Monika Bajorek and Michael H. Glickman</i>	
6.1	Background	111
6.2	The Importance of Channel Gating	114
6.3	A Porthole into the Proteasome	117
6.3.1	The Closed State	117
6.3.2	The Open State	119
6.4	Facilitating Traffic Through the Gated Channel	121
6.4.1	Regulatory Complexes	121
6.4.2	Substrate-facilitated Traffic	122
6.5	Summary: Consequences for Regulated Proteolysis	123
	References	124

7	Ubiquity and Diversity of the Proteasome System	129
	<i>Keiji Tanaka, Hideki Yashiroda, and Shigeo Murata</i>	
7.1	Introduction	129
7.2	Catalytic Machine	130
7.2.1	Standard Proteasome	130
7.2.2	The Immunoproteasome	133
7.3	Regulatory Factors	136
7.3.1	PA700	137
7.3.2	Rpn10	139
7.3.3	Modulator	140
7.3.4	PA28	141
7.3.5	Hybrid Proteasomes	142
7.3.6	PA200	143
7.3.7	Ecm29	144
7.3.8	PI31	144
7.4	Proteasome Assembly	145
7.4.1	Roles of Propeptides	145
7.4.2	Ump1	146
7.4.3	Immunoproteasome Assembly	146
7.4.4	Assembly of the 26S Proteasome	147
7.5	Perspectives	148
	References	149
8	Proteasome-Interacting Proteins	157
	<i>Jean E. O'Donoghue and Colin Gordon</i>	
8.1	Introduction	157
8.1.1	The Proteasome	157
8.1.2	Structure of the 26S Proteasome	158
8.1.3	Marking Proteins for Proteasomal Degradation – the Ubiquitin System	159
8.2	Regulators of the Holoenzyme and Chaperones Involved in Assembly of the Proteasome	160
8.2.1	Proteasome Assembly and Integrity	160
8.2.2	Regulators of the Holoenzyme	160
8.3	Enzymes Controlling Ubiquitination and Deubiquitination	162
8.3.1	E2 Ubiquitin-Conjugating Enzymes	162
8.3.2	E3 Ubiquitin Ligases	163
8.3.3	Deubiquitinating Enzymes (DUBs)	165
8.4	Shuttling Proteins: Rpn10/Pus1 and UBA-UBL Proteins	169
8.5	Other UBL-Containing Proteins	172
8.6	VCP/p97/cdc48	173
8.7	Proteasome Interactions with Transcription, Translation and DNA Repair	174
8.8	Concluding Remarks	176
	References	178

9	Structural Studies of Large, Self-compartmentalizing Proteases	183
	<i>Beate Rockel, Jürgen Bosch, and Wolfgang Baumeister</i>	
9.1	Self-compartmentalization: An Effective Way to Control Proteolysis	183
9.2	ATP-dependent Proteases: The Initial Steps in the Proteolytic Pathway	185
9.2.1	The Proteasome	185
9.2.1.1	The 20S Proteasome	185
9.2.1.2	The PA28 Activator	186
9.2.1.3	The 19S Cap Complex	187
9.2.1.4	Archaeal and Bacterial AAA ATPases Activating the 20S Proteasome	189
9.2.2	The Clp Proteases	190
9.3	Beyond the Proteasome: ATP-independent Processing of Oligopeptides Released by the Proteasome	193
9.3.1	Tripeptidyl Peptidase II	193
9.3.2	Tricorn Protease	196
9.3.3	Tetrahedral Aminopeptidase	200
9.4	Conclusions	201
	Acknowledgments	202
	References	202
10	What the Archaeal PAN–Proteasome Complex and Bacterial ATP-dependent Proteases Can Teach Us About the 26S Proteasome	215
	<i>Nadia Benaroudj, David Smith, and Alfred L. Goldberg</i>	
10.1	Introduction	215
10.2	Archaeal 20S Proteasomes	217
10.3	PAN the Archaeal Homologue of the 19S Complex	222
10.4	VAT, a Potential Regulator of Proteasome Function	227
10.5	The Use of PAN to Understand the Energy Requirement for Proteolysis	227
10.5.1	ATP Hydrolysis by PAN Allows Substrate Unfolding and Degradation	228
10.5.2	ATP Hydrolysis by PAN Serves Additional Functions in Protein Degradation	229
10.5.3	PAN and ATP Regulate Gate Opening	231
10.5.4	PAN and ATP Are Required for Translocation of Unfolded Substrates	232
10.6	Direction of Substrate Translocation	232
10.7	Degradation of Polyglutamine-containing Proteins	234
10.8	Eubacterial ATP-dependent Proteases	235
10.8.1	HslUV (ClpYQ)	235
10.8.2	ClpAP and ClpXP	237
10.9	How AAA ATPases Use ATP to Catalyze Proteolysis	238
10.10	Conclusions	239
	Acknowledgments	240
	References	240

11	Biochemical Functions of Ubiquitin and Ubiquitin-like Protein Conjugation	249
	<i>Mark Hochstrasser</i>	
	Abstract	249
11.1	Introduction	249
11.1.1	The Ubiquitin Conjugation Pathway	250
11.1.2	Ubiquitin Polymers	251
11.1.3	Ubiquitin Attachment Dynamics	251
11.2	Ubls: A Typical Modification Cycle by an Atypical Set of Modifiers	252
11.2.1	Some Unusual Ubl Conjugation Features	254
11.3	Origins of the Ubiquitin System	255
11.3.1	Sulfurtransferases and Ubl Activation Enzymes	256
11.3.2	The E1–E2 Couple	257
11.4	Ubiquitin-binding Domains and Ubiquitin Receptors in the Proteasome Pathway	259
11.4.1	A Proteasome “Ubiquitin Receptor”	259
11.4.2	A Plethora of Ubiquitin-binding Domains	259
11.4.3	Ubiquitin Conjugate Adaptor Proteins	260
11.5	Ubiquitin-binding Domains and Membrane Protein Trafficking	261
11.5.1	The MVB Pathway and RNA Virus Budding	263
11.6	Sumoylation and SUMO-binding Motifs	264
11.6.1	A SUMO-binding Motif	265
11.6.2	A SUMO-induced Conformational Change	266
11.6.3	Interactions Between Different Sumoylated Proteins	267
11.7	General Biochemical Functions of Protein–Protein Conjugation	268
11.7.1	Negative Regulation by Ubl Conjugation	269
11.7.2	Positive Regulation by Ubl Conjugation	270
11.7.3	Cross-regulation by Ubbs	270
11.8	Conclusions	271
	Acknowledgments	272
	References	272
	Index	279
