Contents

Preface *XV*
List of Contributors *XIX*

I Basic Principles and Theory *1*

1 Phase-Coherent Transport *3*
Thomas Schäpers
1.1 Introduction *3*
1.2 Characteristic Length Scales *4*
1.2.1 Elastic Mean Free Path *4*
1.2.2 Inelastic Mean Free Path *5*
1.2.3 Phase-Coherence Length *5*
1.2.4 Transport Regimes *6*
1.3 Ballistic Transport *7*
1.3.1 Landauer–Büttiker Formalism *7*
1.3.2 Split-Gate Point Contact *9*
1.4 Weak Localization *13*
1.4.1 Basic Principles *14*
1.4.2 Weak Localization in One and Two Dimensions *15*
1.4.3 Weak Localization in a Magnetic Field *16*
1.5 Spin-Effects: Weak Antilocalization *19*
1.6 Al'tshuler–Aronov–Spivak Oscillations *21*
1.7 The Aharonov–Bohm Effect *23*
1.8 Universal Conductance Fluctuations *27*
1.8.1 Basic Principles *27*
1.8.2 Detailed Analysis *29*
1.8.3 Fluctuations in Long Wires *31*
1.8.4 Energy and Temperature Dependence *32*
1.9 Concluding Remarks *33*
References *34*

Nanotechnology. Volume 3: Information Technology I. Edited by Rainer Waser

ISBN: 978-3-527-31738-7

2 Charge Transport and Single-Electron Effects in Nanoscale Systems *37*
Joseph M. Thijssen and Herre S.J. van der Zant
2.1 Introduction: Three-Terminal Devices and Quantization *37*
2.2 Description of Transport *40*
2.2.1 Structure of Nanoscale Devices *40*
2.2.1.1 The Reservoirs *40*
2.2.1.2 The Leads *41*
2.2.1.3 The Island *41*
2.2.2 Transport *42*
2.2.2.1 Coherent-Incoherent Transport *43*
2.2.2.2 Elastic–Inelastic Transport *44*
2.2.2.3 Resonant–Off-Resonant Transport *44*
2.2.2.4 First-Order versus Higher-Order Processes *44*
2.2.2.5 Direct Tunneling *45*
2.3 Resonant Transport *45*
2.4 Constant Interaction Model *49*
2.5 Charge Transport Measurements as a Spectroscopic Tool *53*
2.5.1 Electronic Excitations *55*
2.5.2 Including Vibrational States *57*
2.6 Second-Order Processes *59*
2.6.1 The Kondo Effect in a Quantum Dot with an Unpaired Electron *60*
2.6.2 Inelastic Co-Tunneling *61*
References *63*

3 Spin Injection–Extraction Processes in Metallic and Semiconductor Heterostructures *65*
Alexander M. Bratkovsky
3.1 Introduction *65*
3.2 Main Spintronic Effects and Devices *67*
3.2.1 TMR *67*
3.2.2 GMR *68*
3.2.3 (Pseudo)Spin-Torque Domain Wall Switching in Nanomagnets *70*
3.3 Spin-Orbital Coupling and Electron Interference Semiconductor Devices *72*
3.3.1 Spin-Hall Effect (SHE) and Magnetoresistance due to Edge Spin Accumulation *74*
3.3.2 Interacting Spin Logic Circuits *76*
3.4 Tunnel Magnetoresistance *77*
3.4.1 Impurity Suppression of TMR *80*
3.4.2 Negative Resonant TMR? *81*
3.4.3 Tunneling in Half-Metallic Ferromagnetic Junctions *82*
3.4.4 Surface States Assisted TMR *84*
3.4.5 Inelastic Effects in TMR *84*
3.5 Spin Injection/Extraction into (from) Semiconductors *86*
3.5.1 Spin Tunneling through Modified (Delta-Doped) Schottky Barrier *89*

3.5.2 Conditions for Efficient Spin Injection and Extraction *95*
3.5.3 High-Frequency Spin-Valve Effect *97*
3.5.4 Spin-Injection Devices *99*
3.5.5 Spin Source of Polarized Radiation *101*
3.6 Conclusions *104*
References *104*

4 Physics of Computational Elements *109*
Victor V. Zhirnov and Ralph K. Cavin
4.1 The Binary Switch as a Basic Information-Processing Element *109*
4.1.1 Information and Information Processing *109*
4.1.2 Properties of an Abstract Binary Information-Processing System *110*
4.2 Binary State Variables *111*
4.2.1 Essential Operations of an Abstract Binary Switch *111*
4.2.2 The Use of Particles to Represent Binary Information *111*
4.3 Energy Barriers in Binary Switches *113*
4.3.1 Operation of Binary Switches in the Presence of Thermal Noise *113*
4.3.2 Quantum Errors *114*
4.3.3 A Combined Effect of Classical and Quantum Errors *116*
4.4 Energy Barrier Framework for the Operating Limits of Binary Switches *116*
4.4.1 Limits on Energy *116*
4.4.2 Limits on Size *117*
4.4.3 Limits on Speed *118*
4.4.4 Energy Dissipation by Computation *119*
4.5 Physics of Energy Barriers *119*
4.5.1 Energy Barrier in Charge-Based Binary Switch *120*
4.5.2 Energy Barrier in Spin-Based Binary Switch *124*
4.5.3 Energy Barriers for Multiple-Spin Systems *128*
4.5.4 Energy Barriers for the Optical Binary Switch *130*
4.6 Conclusions *131*
References *132*

II Nanofabrication Methods *135*

5 Charged-Particle Lithography *137*
Lothar Berger, Johannes Kretz, Dirk Beyer, and Anatol Schwersenz
5.1 Survey *137*
5.2 Electron Beam Lithography *141*
5.2.1 Introduction *141*
5.2.1.1 Electron Sources *141*
5.2.1.2 Electron Optics *142*
5.2.1.3 Gaussian Beam Lithography *147*
5.2.1.4 Shaped Beam Lithography *148*
5.2.1.5 Patterning *151*

5.2.2 Resists *153*
5.2.3 Applications *158*
5.2.3.1 Photolithography Masks *158*
5.2.3.2 Direct-Write Lithography *162*
5.2.3.3 Maskless Lithography *164*
5.2.3.4 Imprint Templates *170*
5.2.4 Integration *170*
5.3 Ion Beam Lithography *172*
5.3.1 Introduction *172*
5.3.1.1 Ion Sources *173*
5.3.1.2 Ion Optics *173*
5.3.1.3 Patterning *173*
5.3.2 Applications *173*
5.3.2.1 Direct-Structuring Lithography *174*
5.3.2.2 Imprint Templates *176*
5.4 Conclusions *176*
References *177*

6 Extreme Ultraviolet Lithography *181*
Klaus Bergmann, Larissa Juschkin, and Reinhart Poprawe
6.1 Introduction *181*
6.1.1 General Aspects *181*
6.1.2 System Architecture *182*
6.2 The Components of EUV Lithography *185*
6.2.1 Light Sources *185*
6.2.1.1 Plasmas as EUV Radiators *186*
6.2.1.2 Laser-Induced Plasmas *187*
6.2.1.3 Gas Discharge Plasmas *188*
6.2.1.4 Source Concepts and Current Status *189*
6.2.2 Collectors and Debris Mitigation *191*
6.2.3 Multilayer Optics *194*
6.2.4 Masks *198*
6.2.5 Resist *199*
6.3 Outlook *203*
References *204*

7 Non-Optical Lithography *209*
Clivia M. Sotomayor Torres and Jouni Ahopelto
7.1 Introduction *209*
7.2 Nanoimprint Lithography *210*
7.2.1 The Nanoimprint Process *210*
7.2.2 Polymers for Nanoimprint Lithography *211*
7.2.3 Variations of NIL Methods *215*
7.2.3.1 Single-Step NIL *215*

7.2.3.2 Step-and-Stamp Imprint Lithography *216*
7.2.3.3 Step-and-Flash Imprint Lithography *216*
7.2.3.4 Roll-to-Roll Printing *217*
7.2.4 Stamps *217*
7.2.5 Residual Layer and Critical Dimensions *222*
7.2.6 Towards 3-D Nanoimprinting *227*
7.2.7 The State of the Art *230*
7.3 Discussion *230*
7.4 Conclusions *234*
References *235*

8 Nanomanipulation with the Atomic Force Microscope *239*
Ari Requicha
8.1 Introduction *239*
8.2 Principles of Operation of the AFM *242*
8.2.1 The Instrument and its Modes of Operation *242*
8.2.2 Spatial Uncertainties *247*
8.3 Nanomanipulation: Principles and Approaches *250*
8.3.1 LMR Nanomanipulation by Pushing *250*
8.3.2 Other Approaches *253*
8.3.3 Manipulation and Assembly of Nanostructures *256*
8.4 Manipulation Systems *260*
8.4.1 Interactive Systems *260*
8.4.2 Automated Systems *261*
8.5 Conclusion and Outlook *265*
References *267*

9 Harnessing Molecular Biology to the Self-Assembly of Molecular-Scale Electronics *275*
Uri Sivan
9.1 Introduction *275*
9.2 DNA-Templated Electronics *278*
9.2.1 Scaffolds and Metallization *278*
9.2.2 Sequence-Specific Molecular Lithography *281*
9.2.3 Self-Assembly of a DNA-Templated Carbon Nanotube Field-Effect Transistor *284*
9.3 Recognition of Electronic Surfaces by Antibodies *288*
9.4 Molecular Shift-Registers and their Use as Autonomous DNA Synthesizers [11] *293*
9.4.1 Molecular Shift-Registers *293*
9.4.2 Error Suppression and Analogy Between Synthesis and Communication Theory *298*
9.5 Future Perspectives *300*
References *301*

10 Formation of Nanostructures by Self-Assembly *305*
Melanie Homberger, Silvia Karthäuser, Ulrich Simon, and Bert Voigtländer
10.1 Introduction *305*
10.2 Self-Assembly by Epitaxial Growth *306*
10.2.1 Physical Principles of Self-Organized Epitaxial Growth *306*
10.2.1.1 Epitaxial Growth Techniques *306*
10.2.1.2 Kinetically Limited Growth in Homoepitaxy *307*
10.2.1.3 Thermodynamically Stable Nanostructures *309*
10.2.1.4 Nanostructure Formation in Heteroepitaxial Growth *311*
10.2.2 Semiconductor Nanoislands and Nanowires *313*
10.2.2.1 Stranski–Krastanov Growth of Nanoislands *313*
10.2.2.2 Lateral Positioning of Nanoislands by Growth on Templates *314*
10.2.2.3 Silicide Nanowires *315*
10.2.2.4 Monolayer-Thick Wires at Step Edges *315*
10.2.3 Hybrid Methods: The Combination of Lithography and Self-Organized Growth *317*
10.2.4 Inorganic Nanostructures as Templates for Molecular Layers *318*
10.3 Molecular Self-Assembly *320*
10.3.1 Attaching Molecules to Surfaces *321*
10.3.1.1 Preparation of Substrates *322*
10.3.1.2 Preparation of Self-Assembled Monolayers *322*
10.3.1.3 Preparation of Mixed Self-Assembled Monolayers *323*
10.3.2 Structure of Self-Assembled Monolayers *324*
10.3.2.1 Organothiols on Metals *325*
10.3.2.2 Carboxylates on Copper *326*
10.3.3 Supramolecular Nanostructures *327*
10.3.4 Applications of Self-Assembled Monolayers *330*
10.3.4.1 Surface Modifications *330*
10.3.4.2 Adsorption of Nanocomponents *330*
10.3.4.3 Steps to Nanoelectronic Devices *331*
10.4 Preparation and Self-Assembly of Metal Nanoparticles *334*
10.4.1 Preparation of Metal Nanoparticles *334*
10.4.2 Assembly of Metal Nanoparticles *337*
10.4.2.1 Three-Dimensional Assemblies *337*
10.4.2.2 Two-Dimensional Assemblies: The Formation of Monolayers *339*
10.4.2.3 One-Dimensional Assemblies *341*
10.5 Conclusions *344*
References *344*

III High-Density Memories *349*

11 Flash-Type Memories *351*
Thomas Mikolajick
11.1 Introduction *351*
11.2 Basics of Flash Memories *353*

11.2.1 Programming and Erase Mechanisms *353*
11.2.1.1 Hot Carrier Injection *354*
11.2.1.2 Fowler–NordheimTunneling *357*
11.2.1.3 Array Architecture *358*
11.3 Floating-Gate Flash Concepts *359*
11.3.1 The Floating-Gate Transistor *359*
11.3.2 NOR Flash *361*
11.3.3 NAND Flash *363*
11.3.4 Reliability Aspects of Floating-Gate Flash *365*
11.3.5 Scaling of Floating-Gate Flash *366*
11.4 Charge-Trapping Flash *370*
11.4.1 SONOS *370*
11.4.2 Multi-Bit Charge Trapping *372*
11.4.3 Scaling of Charge-Trapping Flash *375*
11.5 Nanocrystal Flash Memories *376*
11.6 Summary and Outlook *378*
References *379*

12 Dynamic Random Access Memory *383*
Fumio Horiguchi
12.1 DRAM Basic Operation *383*
12.2 Advanced DRAM Technology Requirements *384*
12.3 Capacitor Technologies *385*
12.4 Array Transistor Technologies *389*
12.5 Capacitorless DRAM (Floating Body Cell) *393*
12.6 Summary *395*
References *395*

13 Ferroelectric Random Access Memory *397*
Soon Oh Park, Byoung Jae Bae, Dong Chul Yoo, and U-In Chung
13.1 An Introduction to FRAM *397*
13.1.1 1T1C and 2T2C-Type FRAM *398*
13.1.2 Cell Operation and Sensing Scheme of Capacitor-Type FRAM *399*
13.2 Ferroelectric Capacitors *401*
13.2.1 Ferroelectric Oxides *401*
13.2.2 Fatigue *402*
13.2.3 Retention *403*
13.2.3.1 Crystallinity of PZT Film *406*
13.2.3.2 The MOCVD Deposition Process *406*
13.2.3.3 Perovskite Oxide Electrode *407*
13.3 Cell Structures *408*
13.3.1 CUB Structure *408*
13.3.2 COB Structure *410*
13.4 High-Density FRAM *410*
13.4.1 Area Scaling *410*

13.4.2 Voltage Scaling *412*
13.4.3 3-D Capacitor Structure *413*
13.4.3.1 Limitation of Planar Capacitor *413*
13.4.3.2 Demonstration of a 3-D Capacitor *413*
13.5 Summary and Conclusions *417*
References *417*

14 Magnetoresistive Random Access Memory *419*
Michael C. Gaidis
14.1 Magnetoresistive Random Access Memory (MRAM) *419*
14.2 Basic MRAM *420*
14.3 MTJ MRAM *422*
14.3.1 Antiferromagnet *426*
14.3.2 Reference Layer *427*
14.3.3 Tunnel Barrier *427*
14.3.4 Free Layer *428*
14.3.5 Substrate *428*
14.3.6 Seed Layer *428*
14.3.7 Cap Layer *429*
14.3.8 Hard Mask *429*
14.4 MRAM Cell Structure and Circuit Design *429*
14.4.1 Writing the Bits *429*
14.4.2 Reading the Bits *433*
14.4.3 MRAM Processing Technology and Integration *436*
14.4.3.1 Process Steps *437*
14.5 MRAM Reliability *439*
14.5.1 Electromigration *439*
14.5.2 Tunnel Barrier Dielectrics *440*
14.5.3 BEOL Thermal Budget *440*
14.5.4 Film Adhesion *441*
14.6 The Future of MRAM *441*
References *443*

15 Phase-Change Memories *447*
Andrea L. Lacaita and Dirk J. Wouters
15.1 Introduction *447*
15.1.1 The Non-Volatile Memory Market, Flash Memory Scaling, and the Need for New Memories *447*
15.1.2 PCM Memories *448*
15.2 Basic Operation of the Phase-Change Memory Cell *449*
15.2.1 Memory Element and Basic Switching Characteristics *449*
15.2.2 SET and RESET Programming Characteristics *452*
15.3 Phase-Change Memory Materials *453*
15.3.1 The Chalcogenide Phase-Change Materials: General Characteristics *453*

15.3.1.1 The Pseudo-Binary GeTe-Sb_2Te_3 Compositions *454*
15.3.1.2 Compositions Based on the $Sb_{70}Te_{30}$ "Eutectic" Compound *454*
15.3.1.3 Other Material Compositions *455*
15.3.1.4 N- or O-Doped GST *455*
15.3.2 Material Structure *455*
15.3.2.1 Long-Range Order: Crystalline State in GST and Doped Sb-Te *455*
15.3.2.2 Short-Range Order in Crystalline versus Amorphous State *455*
15.3.3 Specific Properties Relevant to PCM *457*
15.4 Physics and Modeling of PCM *458*
15.4.1 Amorphization and Crystallization Processes *458*
15.4.2 Band-Structure and Transport Model *459*
15.4.3 Modeling of the SET and RESET Switching Phenomena *462*
15.4.4 Transient Behavior *463*
15.5 PCM Integration and Cell Structures *464*
15.5.1 PCM Cell Components *464*
15.5.2 Integration Aspects *466*
15.5.3 PCM Cell Optimization *467*
15.5.3.1 Concentrating the Volume of Joule Heating *467*
15.5.3.2 Improving the Thermal Resistance *467*
15.6 Reliability *469*
15.6.1 Introduction *469*
15.6.2 Retention for PCM: Thermal Stability *469*
15.6.3 Cycling and Failure Modes *470*
15.6.4 Read and Program Disturbs *472*
15.7 Scaling of Phase-Change Memories *472*
15.7.1 Temperature Profile Distributions *472*
15.7.2 Scaling of the Dissipated Power and Reset Current *473*
15.7.3 Voltage Scaling *475*
15.7.4 Cell Size Scaling *476*
15.7.5 Scaling and Cell Performance: Figure of Merit for PCM *478*
15.7.6 Physical Limits of Scaling *478*
15.8 Conclusions *479*
References *480*

16 Memory Devices Based on Mass Transport in Solid Electrolytes *485*
Michael N. Kozicki and Maria Mitkova
16.1 Introduction *485*
16.2 Solid Electrolytes *486*
16.2.1 Transport in Solid Electrolytes *486*
16.2.2 Major Inorganic Solid Electrolytes *488*
16.2.3 Chalcogenide Glasses as Electrolytes *490*
16.2.4 The Nanostructure of Ternary Electrolytes *492*
16.3 Electrochemistry and Mass Transport *494*
16.3.1 Electrochemical Cells for Mass Transport *494*
16.3.2 Electrodeposit Morphology *497*

16.3.3 Growth Rate *500*
16.3.4 Charge, Mass, Volume, and Resistance *501*
16.4 Memory Devices *504*
16.4.1 Device Layout and Operation *504*
16.4.2 Device Examples *506*
16.4.3 Technological Challenges and Future Directions *511*
16.5 Conclusions *513*
References *513*

Index *517*
