

Index

a

adjuvant-induced arthritis (AIA) 84
 Affymetrix arrays 13
 – steps 16
 Affymetrix gene chips 5, 6, 16
 agglomerative clustering merging
 process 28
 Akaike information criterion (AIC)
 258
 aminoacyl-tRNA biosynthesis 369
 ANOVA data analysis 51
 antisense pathway 369
 aortic lesion network 75
Arabidopsis thaliana isoprenoid
 pathway 149
 area under the curve (AUC) 124
 average-cost-per-stage approach 233,
 239

b

Bayesian approaches 308
 Bayesian Dirichlet equivalent (BDE)
 86
 Bayesian hierarchical model 359
 Bayesian information criterion (BIC)
 86
 Bayesian MCMC approach 359
 Bayesian networks (BNs) 33, 36, 102
 106, 244
 – Gaussian BGe scoring metric 110
 – genetic tests 56

– graphical representation 37
 – inference algorithms 84
 – scoring metrics 109
 – theory of 84
 Bayesian scoring metrics 86
 Bellman's equation 233
 best-fit extensions 216
 bilayer verification 63
 Boolean model 83
 bootstrap method 348
 bottom-up approach 243
 – fundamental problems 244
 breast cancer data set 371

c

canine data set 361
 cell wall biosynthesis 407
 chondroitin sulfate proteoglycan 2 93
 chromatin immunoprecipitation
 (ChIP-chip) data 143
 – DNA chip 331
 – experiments 16
 chronic fatigue syndrome (CFS) 285
 – results for 298
 classification and regression tree
 (CART) methods 144
 coefficient of determination (CoD) 216
 coexpression network methods 32
 completed partially directed acyclic
 graphs (CPDAGs) 108
 conditional probability table (CPT) 86

connected components (CC) 39
 context-sensitive PBN 213, 214, *see*
 also probabilistic Boolean networks
 – transition probability of 223
 covariance graph 104, 145
 covariance selection model, *see*
 Gaussian precision graph model
 cross validation (CV) 148, 373
 cytometry data 127
 cytoskeletal process 405

d

delayed stochastic simulation
 algorithm 171, 178
 deoxyribonucleic acid (DNA) 169
 – significance 169
 depth first search (DFS) algorithm 39
 deterministic Boolean network
 methods 32
 diabetes data set 371
 differential equation model 83, 206
 differentially regulated genetic
 networks 272
 directed acyclic graphs (DAGs) 52,
 107, 108
 directed graph evaluation (DGE) 122
 discounted approach 230
 discrete exogenous variables 247
 DNA chip 243
 DNA methylations 163
 DNA microarray chip 387
 DNA probe 14
 double-strand breaks (DSBs) 195
 dynamic Bayesian network (DBN) 83
 – application 92
 – data pair-up 91

e

ECM-related transcripts 95
 ENCODE Project 10–11
 entropy maximization, concept of
 386
 epidermal growth factor receptor
 (EGFR) 371
 epigenomic markers 163

error-correcting graph matching 294
Escherichia coli 3, 174
 expectation-maximization (EM)
 algorithm 33
 – augmented data 33
 – complete data 33
 – incomplete data 33
 explanatory variables, *see* independent
 variables
 expressed sequence tags (ESTs) 11

f

faithful probability distribution 57
 false discovery rate (FDR) 32, 349
 fibroblast growth factor receptor 93
 fitting probability 263
 Floyd–Warshall algorithm 39
 Fourier spectrum 185
 Fourier transform 29
 functional response model 156
 functional significance score (FSS) 313

g

Gaussian distributions 397
 Gaussian graphic model (GGM) 35,
 104, 146, 160
 – disadvantage of 105
 – network inference 145
 Gaussian precision graph model 146
 gene activity profile (GAP) 209
 gene-by-gene approach 145
 gene clustering algorithm, goals
 32
 gene expression
 – computational methods 163
 – statistical methods 163
 – stochastic nature 172
 gene expression omnibus (GEO) 43
 gene–gene interaction 52, 245, 267
 gene–gene networks 51
 gene list prefiltering 89
 gene networks 48, 51, 102, 143, 170,
 216, 223, 385
 gene ontology 308
 generalized least squares (GLS) 257

generalized linear model (GLM) 162
 gene regulation models 205, 207
 – Bayesian networks 207
 – graph models 207
 gene regulatory networks (GRNs) 170, 180, 206
 genetic algorithms (GAs) 259
 genome-sequencing projects 2
 genome-wide expression profiles 144
 giant connected component (GCC) 39
 global greedy method 87
 gold-standard network 122
 graph 31, 37, 44, 53, 60, 84, 402, 106, 122, 145, 289, 292, 296, 311, 403
 graph edit distance (GED) 294
 – statistical significance of 297
 graph similarity 292, 295
 graphical Gaussian models (GGMs) 102

h

Hessian matrix 253
 heterogeneous nuclear
 ribonucleoprotein A1 93
 heuristic search methods 87
 – inference score 88
 hierarchical clustering methods 27
 – bottom-up 27
 – top-down 27
 high-density arrays 10
 higher order interactions 395
 human genome project 205
 hybridization 3, 4

i

independent variables 245
 inferelator 144
 inflammatory diseases 366
in situ synthesis methods 7, 8
 invasive ductal carcinoma (IDC) 271
 invasive lobular carcinoma (ILC) 271

k

Kolmogorov–Smirnov statistic 355
 Kroneker delta function 211

l

Lagrange parameters 391
 Lasso-EM algorithm 153
 linear Gaussian distribution 126
 local causal discovery (LCD)
 algorithms 57
 – prior work 60
 local quadratic approximation
 algorithm 158
 low density protein (LDL) pathway 363
 lowess normalization method 16

m

Markov chain Monte Carlo (MCMC) 112
 – structure learning 113
 Markov cluster (MCL) algorithm 311
 Markov property 54, 212
 Markov random field (MRF) approach 161
 maskless photolithography 7
 mathematical network models 206
 maximum likelihood estimators 251
 – asymptotic properties of 254
 mean square error (MSE) 105
 melanoma application 220, 227, 235
 Mendelian genes 285
 messenger ribonucleic acid (mRNA) 4, 205
 metabolic oscillations 398
 methylerythritol 4-phosphate (MEP)
 pathway 149
 mevalonate (MVA) pathway 149
 microarray gene expression data 145, 151, 160
 – network information 160
 microarray (MA) 1, 5, 11
 – plot 15
 – uses of 8
 microarray time course (MTC) 144
 modeling genetic networks,
 structural equations for 260
 modeling single gene expression 186
 module finding algorithm (MOFA) 332, 334

- advantages of 344
- pseudocode of 349
- module-membership indicators 152
- module-organized network 321
- mouse segmentation clock data 46
- multidimensional scaling (MDS)
 - plot 365
- multiple myeloma (MM) tissue 269
- multiple-step elongation process 172, 174
- multiple time-delayed stochastic
 - event, modeling gene expression as 179
- multivariate adaptive smoothing
 - splines (MARS) 144
- mutagen methane sulfonate (MMS) 218
- mutual cluster 27

n

- network analysis 398
 - biological interpretation of 404
 - nature of the 400
 - polishing of the data 399
- network constrained (NC) clustering 32
 - method 39
 - results 40
- network constrained distance
 - matrix 39
- network intervention 221
- network models
 - Bayesian network 36
 - Boolean network 34
 - coexpression network 35
 - co-occurrence network 37
- Newton–Raphson algorithm 252
- Newton–Raphson iterations 148
- NimbleGen approach, advantages 7
- non-Markovian events 179
- Northern blot 4
- Notch signaling pathway 301
- novel theory, bilayer verification 62

- nucleic acid interactions 10
- Nyquist theorem 209

o

- oligo synthesis technology 13
- optimal intervention algorithm 223
- ordinary differential equations (ODEs) 171
- ordinary least square (OLS)
 - methods 255
- original control-theoretic approach 223
- oxidative phosphorylation 375

p

- P53–Mdm2 feedback loop network 194
- pathological pathways 288
- perfect match probes 7
- photolithography mask 6
- physical interaction approach 156
- Poisson distribution 176
- policy iteration procedure 231
- position-specific weight matrix (PSWM) 156
- posttranscriptional modifications 170
- posttranslation protein modifications 174
- principle component analysis (PCA) 89
- principle of optimality 226
- probabilistic Boolean networks 210, 216
 - gene regulation with 207
 - instantaneously random PBN 214
 - with random perturbation 213
- probabilistic functional network 310
 - construction of 310
 - modules discovered from 314
- probability distribution 387
- probe design 12
- projection to latent structures (PLS) 89
- proliferating cell nuclear antigen (PCNA) 407

promoter–transcription factor complex 184
 protein chip 243
 protein function annotation 310
 protein kinase A (PKA) 399
 – signaling pathways 406
 protein interactions, *see* nucleic acid interactions
 protein–DNA binding activities 163
 protein–protein interactions 307, 308

q

quantitative trait loci (QTL) mapping strategies 51
 quasi-genetic networks 244, 245

r

radial basis function (RBF) 217
 RAF protein signaling pathway 102, 120
 random Boolean networks approach 200
 random forests
 – algorithm of 379
 – classification 356
 – regression 358
 random greedy 87, 88
 rank-based methods 29
 real data set, application to 149
 realistic nonlinear simulation 127
 receiver operator characteristics (ROC) curve 124
 recursive v-structure location (RVL) 58, 61
 recursive v-structure verification (RVV) 58
 regression model 359
 regulator-regulated gene interactions 265
 regulatory modules, methods for 151
 relevance networks 103
 – method 103
 retinal gene expression data 43
 reverse engineering regulatory networks 103, 215, 216

reversible-jump Markov-chain-Monte-Carlo (RJMCMC) sampling technique 216
 rheumatoid arthritis 84
 ribosomal protein gene hub 408
 ribosome binding site (RBS) 180, 183
 ribosome stalk 405
 – Rpp1A 405
 robust multichip average (RMA) 16

s

Saccharomyces cerevisiae 84, 101, 262, 309, 385
 Scarff–Bloom–Richardson method 271
 serial analysis of gene expression (SAGE) 19
 Shannon's theory of information 386
 sigmoid function 333
 signal transduction 120
 simultaneous equations 245
 siRNA-based intervention 52
 Sjogren-Larsson syndrome 406
 smoothing spline method 157
 sparse regression mixture modeling (SRMM) approach 144
 spotted microarrays 6
 stacking interaction 3
 static Bayesian network (SBN) 83
 stationary policy 228
 stochastic simulation algorithm (SSA) 171, 176
 structural equations, *see* simultaneous equations
 support vector machine (SVM) 373
 system-level modeling 207
 system states 209

t

target of rapamycin (TOR) 399
 temporal relationship identification algorithm (TRIA) 332, 333
 threshold gradient descent (TGD) approach 146

- regularization 146
- toggle switch (TS) 171, 190
- bistability of 190
- top-down approach, disadvantages 244
- TOR signaling pathway 406
- trace plot diagnostics 114
- transcriptional modules 151
- transcriptional networks 155
 - inference 155
- transcriptional regulatory module (TRM) 331
- transcription factor genes 41
- transition-sequence equivalence 119
- two-stage least square method 255
 - estimation 256
 - reduce form 256
- tumor protein (TCTP) gene 409

u

- undirected dependency graph (UDG) 286, 289
- undirected graph evaluation (UGE) 122
- unperturbed probability distribution function 396

- unweighted least squares (ULS) 257
- urokinase-type plasminogen activator 93

v

- value iteration procedure 231
- v-structure test 68
 - estimating α false-positive rates for 70
 - mechanics of 69

w

- Wick's theorem 397

y

- yeast galactose metabolism pathway 40
 - enzyme genes 41
 - transcription factor genes 41
 - transporter genes 41
- yeast gene interaction network 320
- yeast stress data set, application to 154
- yeast two-hybrid interactions 101
