Editorial committee	VII
Translation preface	IX
Preface to the original memorandum	XIII
Summary	XV
1 Astronomy yesterday, today and tomorrow	1
1.1 The history of the universe	1
1.2 The life cycle of stars and the matter cycle	7
1.3 New windows into space	17
2 The scientific issues	23
2.1 The universe – its origin, evolution and large-scale structure	23
2.1.1 The big bang and cosmic background radiation	25
2.1.2 The cosmic distance scale	28
2.1.3 Cosmological evolution	32
2.1.4 The large-scale structure of the universe	37
2.1.5 Galaxy clusters as cosmic laboratories	41
2.1.6 Ultra-high-energy gamma-ray astronomy	45
2.1.7 Astroparticle physics	47
2.1.8 New properties of neutrinos	50
2.1.9 Gravitational wave astronomy	52
2.2 Galaxies and massive black holes	53
2.2.1 Origin and evolution of galaxies	56
2.2.2 Structure of galaxies	65
2.2.3 Massive black holes	70
2.2.4 Active galactic nuclei	77
2.3 The matter cycle and stellar evolution	82
2.3.1 The interstellar medium	84
2.3.2 Cosmic rays	90
2.3.3 The nearest star: the sun	92

Status and Prospects of Astronomy in Germany, 2003–2016. DFG, Deutsche Forschungsgemeinschaft

V

Contents

2.3.4	The stars	94
2.3.5	Stars as chemical factories and the engines of the matter cycle	99
2.3.6	The final stages of stellar evolution	102
2.4	Stellar and planetary formation: protostars, circumstellar disks and extrasolar planetary systems	109
2.4.1	Star formation as a fundamental cosmological process	109
2.4.2	Formation of low-mass stars: from prestellar core to dust disk	112
2.4.3	Massive stars, stellar clusters and initial mass distribution	121
2.4.4	Extrasolar planets	124
3	The next fifteen years: observatories and instruments	129
3.1	Access to telescopes and involvement in large international projects	129
3.2	Safeguarding competitiveness	137
3.3	Strengthening national innovation and initiative	139
3.4	Other planned space and balloon missions	145
3.5	New initiatives: astroparticles and gravitational wave research	147
3.6	The next decade's projects	150
3.7	The future role of existing establishments	156
3.7.1	Institute for Radio Astronomy in the Millimetre Range (IRAM)	156
3.7.2	The Effelsberg radio telescope	158
3.7.3	Calar Alto observatory	159
3.7.4	Solar telescopes	161
4	Astronomical research structures	163
4.1	Historical development	163
4.2	The current situation	166
4.3	Research institutes	168
4.4	Research funding instruments	173
4.5	Training	176
4.6	Astronomy and the public	177
5	Recommendations	180
5.1	Some fundamental aspects	180
5.2	Instruments and projects	182
5.3	Large projects	185
5.4	Medium-sized projects	187
5.5	Small projects	187
5.6	Organisational instruments	192
5.7	Interaction and cooperation	195
5.8	Securing and reinforcing funding instruments	198
6	Annex	207
	Member institutes of the German Council of Observatories	207
	Glossary/Acronyms	218
	Telescopes, instruments, experiments	221
