Preface XI

List of Contributors XIII

1	Iron Complexes in Organic Chemistry	1
	<i>Ingmar Bauer and Hans-Joachim Knölker</i>	
1.1	Introduction	1
1.2	General Aspects of Iron Complex Chemistry	2
1.2.1	Electronic Configuration, Oxidation States, Structures	2
1.2.2	Fundamental Reactions	2
1.3	Organoiron Complexes and Their Applications	4
1.3.1	Binary Carbonyl–Iron Complexes	5
1.3.2	Alkene–Iron Complexes	7
1.3.3	Allyl– and Trimethylenemethane–Iron Complexes	8
1.3.4	Acyl– and Carbene–Iron Complexes	9
1.3.5	Diene–Iron Complexes	11
1.3.6	Ferrocenes	18
1.3.7	Arene–Iron Complexes	18
1.4	Catalysis Using Iron Complexes	20
1.4.1	Iron Complexes as Substrates and/or Products in Catalytic Reactions	20
1.4.2	Iron Complexes as Ligands for Other Transition Metal Catalysts	21
1.4.3	Iron Complexes as Catalytically Active Species	21
	References	24
2	Iron Catalysis in Biological and Biomimetic Reactions	29
2.1	Non-heme Iron Catalysts in Biological and Biomimetic Transformations	29
	<i>Jens Müller</i>	
2.1.1	Introduction: Iron in Biological Processes	29
2.1.2	Non-heme Iron Proteins	30
2.1.2.1	Mononuclear Iron Sites	30

2.1.2.2	Dinuclear Iron Sites	39
2.1.3	Summary	45
	References	46
2.2	Organic Reactions Catalyzed by Heme Proteins	48
	<i>Martin Bröring</i>	
2.2.1	Classification and General Reactivity Schemes of Heme Proteins Used in Organic Synthesis	48
2.2.2	Organic Reactions Catalyzed by Cytochromes P450	51
2.2.3	Organic Reactions Catalyzed by Heme Peroxidases	56
2.2.3.1	Dehydrogenations ("Peroxidase Reactivity")	56
2.2.3.2	Sulfoxidations ("Peroxygenase Reactivity")	57
2.2.3.3	Peroxide Disproportionation ("Catalase Reactivity")	58
2.2.3.4	Halogenation ("Haloperoxidase Reactivity")	61
2.2.3.5	Epoxidations ("Monooxygenase Activity")	62
	References	66
3	Iron-catalyzed Oxidation Reactions	73
3.1	Oxidations of C–H and C=C Bonds	73
	<i>Agathe Christine Mayer and Carsten Bolm</i>	
3.1.1	Gif Chemistry	73
3.1.2	Alkene Epoxidation	80
3.1.3	Alkene Dihydroxylation	82
3.1.4	The Kharasch Reaction and Related Reactions	84
3.1.5	Aziridination and Diamination	87
	References	89
3.2	Oxidative Allylic Oxygenation and Amination	92
	<i>Sabine Laschat, Volker Rabe, and Angelika Baro</i>	
3.2.1	Introduction	92
3.2.2	Iron-catalyzed Allylic Oxidations	93
3.2.2.1	Simple Iron Salts	93
3.2.2.2	Fe(III) Complexes with Bidentate Ligands	94
3.2.2.3	Fe ³⁺ /Fe ²⁺ Porphyrin and Phthalocyanine Complexes	95
3.2.2.4	Iron(III) Salen Complexes	100
3.2.2.5	Non-heme Iron Complexes with Tetra- and Pentadentate Ligands	100
3.2.3	Oxidative Allylic Aminations	103
3.2.4	Conclusion	107
	References	107
3.3	Oxidation of Heteroatoms (N and S)	109
	<i>Olga García Mancheño and Carsten Bolm</i>	
3.3.1	Oxidation of Nitrogen Compounds	109

3.3.1.1	Oxidation of Hydroxylamines to Nitroso Compounds	109
3.3.1.2	Oxidation of Arylamines	110
3.3.1.3	Other <i>N</i> -Oxidations	110
3.3.2	Oxidation of Sulfur Compounds	111
3.3.2.1	Oxidation of Thiols to Disulfides	111
3.3.2.2	Oxidation of Sulfides	113
3.3.2.3	Oxidative Imination of Sulfur Compounds	119
	References	122

4 Reduction of Unsaturated Compounds with Homogeneous Iron Catalysts 125

Stephan Enthaler, Kathrin Junge, and Matthias Beller

4.1	Introduction	125
4.2	Hydrogenation of Carbonyl Compounds	125
4.3	Hydrogenation of Carbon–Carbon Double Bonds	129
4.4	Hydrogenation of Imines and Similar Compounds	136
4.5	Catalytic Hydrosilylations	136
4.6	Conclusion	141
	References	142

5 Iron-catalyzed Cross-coupling Reactions 147

Andreas Leitner

5.1	Introduction	147
5.2	Cross-coupling Reactions of Alkenyl Electrophiles	147
5.3	Cross-coupling Reactions of Aryl Electrophiles	154
5.4	Cross-coupling Reactions of Alkyl Electrophiles	161
5.5	Cross-coupling Reactions of Acyl Electrophiles	168
5.6	Iron-catalyzed Carbometallation Reactions	170
5.7	Conclusion	172
	References	173

6 Iron-catalyzed Aromatic Substitutions 177

Jette Kischel, Kristin Mertins, Irina Jovel, Alexander Zapf, and Matthias Beller

6.1	General Aspects	177
6.2	Electrophilic Aromatic Substitutions	178
6.2.1	Halogenation Reactions	178
6.2.2	Nitration Reactions	179
6.2.3	Sulfonylation Reactions	180
6.2.4	Friedel–Crafts Acylations	181
6.2.5	Friedel–Crafts Alkylations	183
6.2.5.1	Alkylation with Alcohols, Ethers and Esters	184
6.2.5.2	Alkylation with Alkenes	186
6.3	Nucleophilic Aromatic Substitutions	188
	References	191

7	Iron-catalyzed Substitution Reactions	197
	<i>Bernd Plietker</i>	
7.1	Introduction	197
7.2	Iron-catalyzed Nucleophilic Substitutions	197
7.2.1	Nucleophilic Substitutions of Non-activated C–X Bonds	197
7.2.1.1	Introduction	197
7.2.1.2	Nucleophilic Substitutions Using Lewis Acidic Fe Catalysts	198
7.2.1.3	Substitutions Catalyzed by Ferrate Complexes	199
7.2.2	Nucleophilic Substitution of Allylic and Propargylic C–X Bonds	202
7.2.2.1	Reactions Catalyzed by Lewis Acidic Fe Salts	202
7.2.2.2	Nucleophilic Substitutions Involving Ferrates	205
7.3	Conclusion	213
	References	214
8	Addition and Conjugate Addition Reactions to Carbonyl Compounds	217
	<i>Jens Christoffers, Herbert Frey, and Anna Rosiak</i>	
8.1	Introduction	217
8.2	Additions to Aldehydes and Ketones	218
8.2.1	Oxygen Nucleophiles	218
8.2.2	Carbon Nucleophiles	219
8.3	Additions to Imines and Iminium Ions	223
8.4	Additions to Carboxylic Acids and Their Derivatives	224
8.4.1	Oxygen Nucleophiles	224
8.4.2	Carbon Nucleophiles	225
8.5	Conjugate Addition to α,β -Unsaturated Carbonyl Compounds	226
8.5.1	Carbon Nucleophiles	226
8.5.1.1	Michael Reactions	226
8.5.1.2	Vinylogous Michael Reactions	230
8.5.1.3	Asymmetric Michael Reactions	232
8.5.1.4	Michael Reactions in Ionic Liquids and Heterogeneous Catalysis	233
8.5.2	Nitrogen Nucleophiles	235
8.6	Synthesis of Heterocycles	236
8.6.1	Pyridine and Quinoline Derivatives	236
8.6.2	Pyrimidine and Pyrazine Derivatives	238
8.6.3	Benzo- and Dibenzopyrans	238
	References	239
9	Iron-catalyzed Cycloadditions and Ring Expansion Reactions	245
	<i>Gerhard Hilt and Judith Janikowski</i>	
9.1	Introduction	245
9.2	Cycloisomerization and Alder–Ene Reaction	245
9.3	[2+1]-Cycloadditions	249

9.3.1	Iron-catalyzed Aziridine Formation	249
9.3.2	Iron-catalyzed Epoxide Formation	251
9.3.3	Iron-catalyzed Cyclopropane Formation	252
9.4	[2+2]-Cycloaddition	254
9.5	[4+1]-Cycloadditions	256
9.6	[4+2]-Cycloadditions	257
9.6.1	Diels–Alder Reactions with Normal Electron Demand	257
9.6.2	Diels–Alder Reactions with Neutral Electron Demand	259
9.6.3	Diels–Alder Reactions with Inverse Electron Demand	260
9.7	Cyclotrimerization	260
9.8	[3+2]-Cycloadditions	262
9.9	[3+3]-Cycloadditions	263
9.10	Ring Expansion Reactions	263
9.11	Conclusion	266
	References	266
