 palladium-catalyzed Mizoroki–Heck reaction
 – intermolecular arylations 225–238
 – intramolecular arylations 239–248
 – mechanism 222, 222–225
 – overview 221, 222
 – oxidative arylations 254–264
 – reductive arylations 248–253, 251
 PET (photoinduced electron transfer) 515,
 520
 phenanthridine alkaloids 426
 phenols
 – metal-catalyzed direct arylations 315, 316,
 387–389
 – copper-catalyzed arylations 125, 126
 – palladium-catalyzed arylations 337–341
 phenyl cation 518, 519
 phosphabarrelene 434
 phosphine-olefin hybrid ligand 284, 287
 phosphinous acids 37, 38, 45, 80, 350
 phosphorylation, aryl radicals 502
 photoinduced electron transfer (PET) 515,
 520
 photosubstitution 514
 photochemical arylation 513–532
 – aryl-alkyl bond formation 517–525
 – aryl-aryl bonds 527–530
 – aryl-N bonds 530, 531
 – cyanations 525, 526
 – overview 513–517, 532
 podophyllotoxin 487
 polysubstituted anthracenols 429, 430
 potassium aryltrifluoroborate salts 130,
 144, 145
 Pschorr reactions 480
 pseudohalides *see* alkyl halides
 pyridines arylation 313–315, 320–325, 327,
 386–388, 341–344
 pyrroles, arylation 319, 348–353

q

quinoline, arylation 330

r

radical anions 475, 476
 radical aryl migrations 486–489
 radical cyclizations 479–489, 498–502
 radical-based arylation 475–503
 – homolytic aromatic substitutions 480–496

- overview 475, 502, 503
- phosphorylation, aryl radicals 502
- radical nucleophilic substitution 475–480
- radicals
 - cyclizations 479–489, 498–502
 - cyclohexadienyl radical 490
 - electrophilic C-centered 485–486, 493–495
 - homolytic aromatic substitutions 480–496
 - phosphorylation 502
- rearrangements, radical-based 486
- reductive Heck reaction 221, 222, 248–253
- rhodium
 - ketone arylation 277, 278
 - conjugate arylation 281–284, 285–298
 - aldehyde arylation 274, 275, 275
 - direct arylation 312–320
 - mechanism 379, 380, 388, 389
 - imine arylation 279–281
- ring-opening metathesis polymerization (ROMP) 192, 203
- ROMP (ring-opening metathesis polymerization) 192, 203
- Rosenmund–von Braun reactions 525
- rubromycins 430
- ruthenium-catalyzed arylations 17, 206, 207, 320–327, 386–388

S

- Sandmeyer reaction 525
- σ -bond, aryne insertion 410–416, 462–468
- single electron transfer (SET) 514
- secondary phosphine oxide 38, 45, 51, 323–326
- Sonogashira reaction 183–215
 - *N*-heterocyclic carbenes 192–197
 - indium-based catalyzed reactions 207
 - mechanism, with copper 208–210
 - mechanism, copper-free 210–214
 - nickel-catalyzed reactions 205, 206
 - overview 183–185, 214, 215
 - palladium-catalyzed reactions 185–205
 - ruthenium-catalyzed reactions 206, 207
- Stille reaction 13, 42–45, 466
- Suzuki–Miyaura reaction 13, 14, 29–42, 206, 207, 273, 274, 466

T

- Tamao–Fleming oxidation 288
- tandem processes, carbonyl arylation 293–298

- TAP (tri-amino-phosphine) ligands 45, 78
- TCB (1,2,4,5-tetracyanobenzene) 522
- 1,2,4,5-tetracyanobenzene (TCB) 522
- tetraene ligand 164, 165
- thiazoles, arylation 353–356, 376, 379
- thiophenes, arylation 319, 320, 328, 348–353
- thiophenolates 478
- tin hydride-mediated C–C bond formation 480–489
- TPPMS (monosulfonated triphenyl phosphine) 109, 191
- transition metal-catalyzed reactions, arynes 449–468
- transition metal-catalyzed arylations, direct 311–330, 335–357, 363–391
 - cross-dehydrogenative couplings 350, 388–391
- overview 311, 330, 335, 357, 363, 391
- tri-amino-phosphine (TAP) ligands 45, 78
- triarylaluminum 277
- triazole, arylation 326, 329
- trifluoromethyl-substituted ketone arylation 277, 278
- triones 296
- trisphaeridine 426

U

- Ullmann reaction 5–7, 121, 122, 128, 150
- Ullmann, Fritz 5, 5, 6
- α,β -unsaturated aldehyde 284, 285, 302
- $\alpha,\beta,\gamma,\delta$ -unsaturated carbonyl compounds 291–293
- α,β -unsaturated Weinreb amides 288

V

- vineomycinone 431
- vinyl radicals 483

W

- web sites 185

Z

- Zhou's spirocyclic phosphite 275
- Zimmerman–Traxler-type transition state 295, 296
- zinc, arylations
 - aldehyde arylation 271–274, 276
 - imine phenylation 278, 279
- zwitterion 410, 417, 418, 444
