

Contents

	Preface	<i>XIII</i>
	List of Contributors	<i>XV</i>
1	Thermodynamics and Kinetics of Ring-Opening Polymerization	1
	<i>Andrzej Duda and Adam Kowalski</i>	
1.1	Introduction	1
1.2	Thermodynamics of the Ring-Opening Polymerization	3
1.2.1	Equilibrium Monomer Concentration: Ceiling/Floor Temperatures	3
1.2.2	Selected Particular Cases	11
1.2.2.1	Polymerization in Heterogeneous Systems	11
1.2.2.2	Monomer–Polymer–Solvent Interactions	12
1.2.2.3	Thermodynamics of Oligomerization	12
1.2.3	Thermodynamics of Macrocyclization	15
1.2.4	Equilibrium Copolymerization	18
1.2.5	Molar Mass Distribution in the Equilibrium Polymerization	21
1.3	Kinetics of Ring-Opening Polymerization	23
1.3.1	Thermodynamic and Kinetic Polymerizability	23
1.3.2	Kinetics of Living Polymerization	25
1.3.2.1	Kinetic Criteria of Living Polymerization	26
1.3.2.2	Active Center Interconversions and the Determination of Absolute Rate Constants	28
1.3.2.3	Departure from Livingness: Kinetics of Selected Side Reactions	39
1.3.2.4	Kinetics of Copolymerization	44
1.4	Concluding Remarks	45
	References	45
2	General Mechanisms in Ring-Opening Polymerization	53
	<i>Takeshi Endo</i>	
2.1	Introduction	53
2.2	Anionic Ring-Opening Polymerization	53
2.2.1	General Mechanism	53
2.2.2	Activated Monomer Mechanism	55
2.3	Cationic Ring-Opening Polymerization	56

- 2.3.1 General Mechanism 56
- 2.3.2 Activated Monomer Mechanism 57
- 2.3.3 Isomerization Polymerization 58
- 2.4 Radical Ring-Opening Polymerization 60
- 2.5 Summary and Prospects 62
- References 62

3 Siloxane-Containing Polymers 65

François Ganachaud and Sylvie Boileau

- 3.1 Introduction 65
- 3.2 Polydimethylsiloxanes 66
 - 3.2.1 Anionic Polymerization 66
 - 3.2.1.1 General Considerations 66
 - 3.2.1.2 Recent Advances 68
 - 3.2.2 Cationic Polymerization 70
 - 3.2.2.1 General Considerations 70
 - 3.2.2.2 Recent Advances 71
 - 3.2.3 Emulsion Polymerization 73
 - 3.2.3.1 General Considerations 73
 - 3.2.3.2 Recent Advances 75
 - 3.2.4 Other Processes 76
- 3.3 Functional Silicones 76
 - 3.3.1 Anionic Polymerization 77
 - 3.3.1.1 Homopolymerization of Symmetrical Cyclosiloxanes 77
 - 3.3.1.2 Homopolymerization of Asymmetrical Cyclosiloxanes 79
 - 3.3.1.3 Copolymerization 80
 - 3.3.2 Cationic Polymerization 83
 - 3.3.2.1 Homopolymerization of Symmetrical Cyclosiloxanes 83
 - 3.3.2.2 Homopolymerization of Asymmetrical Cyclosiloxanes 84
 - 3.3.2.3 Copolymerization 84
 - 3.3.3 Emulsion Polymerization 84
- 3.4 Polycarbosiloxanes 85
 - 3.4.1 Five-Atom Rings 87
 - 3.4.2 Larger Cyclocarbosiloxanes 88
- 3.5 Summary and Prospects 89
- Acknowledgments 90
- References 90

4 Sulfur–Nitrogen–Phosphorus-Containing Polymers 97

Frederick F. Stewart and Eric S. Peterson

- 4.1 Introduction 97
- 4.2 Mechanism and Methods in Ring-Opening Polymerization (ROP) of Halogenated Cyclotriphosphazenes 98
- 4.3 Ring-Opening Polymerization and Chemistry of Nonhalogenated Phosphazene Rings 107

4.4	Incorporation of Sulfur into Phosphazene Ring Systems, and Their Polymerization Chemistry	113
4.4.1	Thiophosphazenes	113
4.4.2	Thionylphosphazenes	115
4.5	Summary and Prospects	119
	Acknowledgments	120
	References	120
5	Polymerization of Cyclic Dipeptides, Ureas and Urethanes	123
	<i>Pieter J. Dijkstra</i>	
5.1	Introduction	123
5.2	Polydipeptides	123
5.3	Monomers	124
5.4	Ring-Opening Polymerization	126
5.5	Enzymatic Polymerization	130
5.6	Ring Expansion	131
5.7	Polyureas	133
5.8	Polyurethanes	135
5.9	Summary and Prospects	137
	References	138
6	Polyethers and Polyoxazolines	141
	<i>Richard Hoogenboom</i>	
6.1	Introduction	141
6.2	Polyethers	141
6.2.1	Poly(ethylene Oxide)	142
6.2.2	Poly(oxetane)	142
6.2.3	Poly(tetrahydrofuran)	144
6.3	Polyoxazolines	151
6.4	Summary and Prospects	160
	Acknowledgments	160
	References	161
7	Polyamides	165
	<i>Jan Roda</i>	
7.1	Introduction	165
7.2	Mechanism of the Anionic Polymerization of Lactams	167
7.3	Initiators for the Anionic Polymerization of Lactams	172
7.4	Activators for Anionic Polymerization of Lactams	176
7.4.1	N-Acyl lactams	177
7.4.2	N-Carbamoyl lactams	177
7.4.3	Special Activators	179
7.5	Nonactivated Polymerization	181
7.6	Cyclic Oligomers of ϵ -Caprolactam	182
7.7	Block Copolymers of Lactams	183
7.8	Anionic Copolymerization of ϵ -Caprolactam with ω -Lauro lactam	185

7.9	Copolymerization of Lactams with Lactones (ϵ -Caprolactone)	186
7.10	Powdered Polyamide	188
7.11	Nanocomposites	189
7.12	Anionic Polymerization of 2-Pyrrolidone	189
7.13	Summary and Prospects	191
	Acknowledgments	192
	References	192
8	Ring-Opening Metathesis Polymerization	197
	<i>Michael R. Buchmeiser</i>	
8.1	General Introduction	197
8.2	Introduction to Ring-Opening Metathesis Polymerization (ROMP)	197
8.3	Well-Defined Catalysts for ROMP	199
8.3.1	Schrock-Type Initiators	199
8.3.2	Grubbs-Type Initiators	200
8.4	'Living' ROMP	204
8.4.1	ROMP with Schrock Initiators	205
8.4.2	ROMP with Grubbs-Type Initiators	207
8.5	Selected Recent Applications and Developments	209
8.5.1	Novel Catalysts for ROMP	209
8.5.2	ROMP of High and Low Ring-Strain Monomers	210
8.5.3	Stereoselective and Regioselective ROMP	212
8.5.4	Mechanistic Investigations	212
8.5.5	Alternating Copolymerizations	214
8.5.6	Changes in Polymerization Mechanism	215
8.5.7	Materials Science	215
8.5.8	ROMP in Water and in Ionic Liquids	217
8.5.9	Computational Studies	218
8.6	Summary and Prospects	219
	References	219
9	Polyesters from β-Lactones	227
	<i>Olivier Coulembier and Philippe Dubois</i>	
9.1	Introduction	227
9.2	β -Lactones Preparation	228
9.3	Ionic Polymerization	230
9.3.1	Anionic Processes	230
9.3.2	Carbocationic Process	238
9.4	Coordination Process	239
9.5	Carbene-Based Polymerization	243
9.6	Enzymatic Polymerization	248
9.7	Illustrative Experimental Section	249
9.7.1	Anionic Ring-Opening Polymerization of Benzyl β -Malolactonate	249

- 9.7.2 Synthesis of Poly([R,S]- β -Butyrolactone), α -Methoxy, ω -Carboxylic Acid from Commercially Available 5-Methoxy-1,3,4-Triphenyl-4,5-Dihydro-1H-1,2-Triazol-5-Ylidene Carbene 250
References 250

10 Polyesters from Dilactones 255

Odile Dechy-Cabaret, Blanca Martin-Vaca, and Didier Bourissou

- 10.1 Introduction 255
10.2 General Concepts and ROP Promoted by Metallic Catalysts/Initiators 256
10.2.1 O-Donor Ligands 258
10.2.2 N-Donor Ligands 259
10.2.3 N,O-Donor Ligands 261
10.3 Recent Advances in ROP 262
10.3.1 Metal-Free ROP 262
10.3.1.1 Nucleophilic/Basic Catalysts 262
10.3.1.2 Cationic Polymerization 266
10.3.1.3 Bifunctional Catalysts 266
10.3.2 Stereocontrolled ROP 268
10.3.2.1 rac-Lactide 270
10.3.2.2 meso-Lactide 272
10.4 Macromolecular Engineering 273
10.4.1 'Modified' PLGAs: Alternative Monomers to Lactide and Glycolide 273
10.4.2 Macromolecular Architectures 276
10.4.2.1 Linear Block Copolymers 276
10.4.2.2 Grafted Block Copolymers 277
10.4.2.3 Star and Dendritic Polymers 278
10.5 Applications 278
10.6 Summary and Prospects 280
Acknowledgments 281
References 281

11 Polyesters from Large Lactones 287

Ann-Christine Albertsson, Indra K. Varma, and Rajiv K. Srivastava

- 11.1 Introduction 287
11.2 Controlled Synthesis of Linear Polyesters 289
11.2.1 Nonenzymatic Methods of Polymerization 290
11.2.2 Enzymatic Methods of Polymerization 293
11.2.2.1 The Mechanism of Enzyme-Catalyzed ROP 296
11.2.3 Copolyesters 297
11.2.4 Functionalized Polyesters 298
11.2.5 Chemospecific Polymerization 299
11.2.6 Enantioselective Polymerization 300
11.3 Physical Properties of Polymers 300

11.4	Summary and Prospects	301
	References	302
12	Polycarbonates	307
	<i>Helmut Keul</i>	
12.1	Introduction	307
12.2	Polymerization of Cyclic Carbonates: Homopolymers and Block Copolymers	308
12.2.1	Initiation	309
12.2.1.1	Alkali Metal-Based and Metal-Free Initiators	309
12.2.1.2	Initiators for a Coordination–Insertion Mechanism	311
12.2.2	Chain Propagation	311
12.2.2.1	Alkali Metal Alcoholate and Phenolate Active Sites	312
12.2.2.2	Metal-Free Active Sites: Site Transformation from Group Transfer Polymerization to Anionic Metal-Free Polymerization	313
12.2.2.3	Magnesium, Aluminum and Zinc Alcoholate Active Sites	314
12.2.3	Monomers and Homopolymers	315
12.2.4	Block Copolymers Comprising a Polycarbonate Block	320
12.2.5	Copolymerization of Cyclic Carbonates with Lactones	321
12.3	Summary and Prospects	324
	References	324
13	Polymerization of Cycloalkanes	329
	<i>Jacques Penelle</i>	
13.1	Introduction	329
13.2	General Overview and Thermodynamic Requirements	330
13.3	Structure–Reactivity Relationships Based on a Comprehensive Survey of the Current Literature	332
13.3.1	The Polymerization of Monocyclic Alkanes	349
13.3.1.1	Cyclopropane Rings	349
13.3.1.2	Cyclobutane Rings	350
13.3.2	The Polymerization of Polycyclic Rings	351
13.3.3	Unusual Examples	351
13.4	Summary and Prospects	352
	References	353
14	Metal-Free Catalysis in Ring-Opening Polymerization	357
	<i>Andrew P. Dove</i>	
14.1	Introduction	357
14.2	Nucleophilic ROP	357
14.2.1	Tertiary Amines and Phosphines	357
14.2.2	N-Heterocyclic Carbenes	360
14.2.3	Supramolecular Activation	367
14.2.4	Other Nucleophilic ROP Catalysts	371
14.3	Metal-Free Ionic ROP	373

14.3.1	Cationic	373
14.3.2	Anionic	375
14.4	Summary and Prospects	375
	References	376
15	Enzyme-Mediated Ring-Opening Polymerization	379
	<i>Andreas Heise, Christopher J. Duxbury, and Anja R. A. Palmans</i>	
15.1	Introduction	379
15.2	Characteristics of Enzymatic ROP	380
15.3	Classes of Monomer	383
15.3.1	Lactones	383
15.3.1.1	Substituted Lactones	383
15.3.2	Lactides/Glycolide/Depsipeptides and Cyclic Diesters	388
15.3.3	Cyclic Carbonates and Cyclic Phosphates	390
15.4	Polymer Architectures Employing Enzymatic ROP	391
15.4.1	Block Copolymers	391
15.4.2	Graft Copolymers	392
15.4.3	Branched and Crosslinked Polymers	393
15.5	Summary and Prospects	393
