Preface IX

1	Introduction	1
1.1	Fibers—Key Functional Elements in Technology and Nature	1
1.2	Some Background Information	4
1.2.1	Structure of Crystalline and Amorphous Materials	4
1.2.2	Chain Conformation and Structures of Polymer Materials	7
1.3	Processing of Polymer Materials towards Fibers—Fiber Extrusion	10
1.4	Routes to More Advanced Fibers—Mimicking Nature	12
1.5	Electrospinning	16
1.5.1	A Simple Experimental Approach	16
1.5.2	The Hidden Physical Complexity	20
1.5.3	Short History of Electrospinning—The Routes Go Back More Than Two Centuries	22
1.6	Electrospinning—Important Facts to Remember	24
	References	26
2	Nature of the Electrospinning Process—Experimental Observations and Theoretical Analysis	29
2.1	Experimental Setups	29
2.2	Experimental Observations on Fiber Formation	33
2.2.1	Droplet Formation at the Tip of the Die	34
2.2.2	The Straight Path of the Jet	36
2.2.3	The Looping Part of the Jet—Onset of Bending Instabilities	40
2.2.4	The Deposition Process	42
2.3	Theoretical Analysis of the Nature of the Electrospinning Processes	45
2.3.1	Droplet Deformation and Onset of Jetting	46
2.3.2	Linear Path of the Jet	52
2.3.3	The Path of the Jet Submitted to Bending	55
2.3.4	Deposition on a Substrate	59
2.3.5	Onset of Further Instabilities	60
2.3.6	Branching Processes	66

2.4	Nature of the Electrospinning Process–Important Facts to Remember	66
	References	67
3	Nanofiber Properties	69
3.1	Parameters Controlling Nanofiber Formation	69
3.2	Short Account on Methods of Analysis for the Structure of Electrospun Nanofibers	72
3.2.1	Analysis of Fiber Geometry and Topology	72
3.2.2	Analysis of the Internal Fiber Morphology	76
3.3	Control of Nanofiber Diameters	78
3.3.1	The Feeding Rate	78
3.3.2	Concentration of Polymer Spinning Solution	80
3.3.3	Electrical Parameters: Applied Voltage, Electrode Distance, Conductivity	83
3.3.4	Additional Factors	84
3.3.5	Mixtures of Solvents/Nonsolvents	84
3.4	Shape of the Fibers	84
3.5	Nanofiber Topologies, Porous Fibers	88
3.6	Nanofiber Trajectories in the Deposition Plane	92
3.7	Internal Morphology of Electrospun Nanofibers	96
3.7.1	Amorphous Polymers	97
3.7.2	Partial Crystalline Nanofibers	99
3.8	Mechanical Properties of Single Nanofibers	101
3.9	Nanofiber Properties–Important Facts to Remember	103
	References	103
4	Nonwovens Composed of Electrospun Nanofibers	105
4.1	Nanofiber Nonwovens–Functional Elements for Technical Applications	105
4.2	Methods of Analysis for Properties on Nonwovens	106
4.2.1	Nonwoven Architecture and Total Porosity	106
4.2.2	Analysis of Pore Sizes	107
4.2.3	Internal Specific Surface and Permeation Coefficient	108
4.2.4	Permeation Coefficient	109
4.3	Fiber Arrangements in Nonwovens	109
4.4	Heterogeneous Nonwovens	112
4.5	Porosity and Pore Structures–Theoretical Modeling and Experimental Analysis	113
4.5.1	Prediction of Monte Carlo Simulations	114
4.5.2	Experimental Results	117
4.5.3	Nonwoven with Unimodal Fiber Diameter Distribution	117
4.5.4	Comparisons of Experimental Results with Theoretical Predictions	122
4.6	Mechanical Properties of Nonwovens	124

4.7	Nonwovens Composed of Electrospun Nanofibers—Important Facts to Remember	125
	References	126
5	Electrospinning—Some Technical Aspects	127
5.1	Technical Setups for Creating Jets	127
5.1.1	Some Technical Details	129
5.1.1.1	The Die	129
5.1.2	High-Voltage Supply	130
5.1.3	Counterelectrode	131
5.1.4	Spinning Chamber	131
5.1.5	Multiple-Die Setups	132
5.1.6	Die-Free Multiple-Jet Injection	133
5.2	Designs of Counterelectrode Configurations Allowing Preparation of Nonwovens with a Broad Range of Architecture	137
5.3	Electrospinning—Some Technical Aspects—Important Facts to Remember	141
	References	142
6	Modification of the Electrospinning Technique	143
6.1	Towards Advanced Modes of Fiber Preparation and Deposition	143
6.2	Near-Field Electrospinning—High-Precision Deposition Electrospinning	144
6.2.1	Deposition of Individual Fibers	148
6.2.2	Deposition of Nonwoven Test Pattern	151
6.2.3	Deposition of Precision Nonwovens Paths	151
6.3	Towards Core–Shell and Hollow Fibers	155
6.3.1	Coelectrospinning/Coaxial Electrospinning	155
6.3.2	Core–Shell Fibers and Hollow Fibers via a Template (TUFT Approach)	160
6.3.3	Background Information	160
6.4	Modification of the Electrospinning Technique—Important Facts to Remember	162
	References	163
7	Materials Considerations	165
7.1	Introduction	165
7.1.1	Background Information	166
7.1.1.1	Solutions and Dispersions	166
7.1.1.2	Bioerodible and Biostable Polymers	166
7.2	Spinning from Organic Solvents	166
7.3	Spinning of Water-Soluble Polymers	170
7.4	Spinning of Biopolymers	172
7.5	Spinning of Complex Polymer Systems	175
7.5.1	Background Information	175

7.6	Nanofibers from Polymer Hybrids, Metals, Oxides	178
7.7	Melt Spinning	180
7.8	Materials Considerations—Important Facts to Remember	182
	References	182
8	Technical Applications of Electrospun Nanofibers	185
8.1	Nanofibers, Nanofiber Nonwovens—Elements of Nanotechnology	185
8.2	Filter Applications	187
8.2.1	Basic Processes Controlling Filter Efficiencies	188
8.2.2	Effect of Nanostructuring	190
8.3	Textile Applications	197
8.4	Catalysis	201
8.5	Nanofiber Reinforcement	203
8.5.1	Background Information	203
8.5.2	Molecular/Nanofiber-Based Approach	205
8.6	Surface Modifications	206
8.7	Template Applications	210
8.8	Plant Protection via Pheromones	210
8.8.1	Background Information	210
8.8.2	Nanofiber-Based Approach	212
8.9	Technical Applications—Important Facts to Remember	214
	References	215
9	Medicinal Applications for Electrospun Nanofibers	217
9.1	Nanotechnology and Medicinal Applications in General	217
9.2	Tissue Engineering	218
9.2.1	Background Information	218
9.3	Wound Healing	226
9.4	Transport and Release of Drugs	228
9.4.1	Model Experiment on siRNA Transfection	230
9.4.2	Application in Tumor Therapy	230
9.4.3	Inhalation Therapy	232
9.5	Nanotechnology and Medicinal Applications in General—Important Facts to Remember	233
9.5.1	Tissue Engineering	233
9.5.2	Wound Healing with Nanofibers	234
9.5.3	Transport and Release of Drugs/Drug Delivery	234
	References	235
	Index	237
