#### Part One Origins of Amino Acids 1

<b>1</b>	<b>Extraterrestrial Amino Acids 3</b>
	<i>Z. Martins and M.A. Sephton</i>
1.1	Introduction 3
1.2	ISM 6
1.2.1	Formation of Amino Acids in the ISM via Solid-Phase Reactions 6
1.2.2	Formation of Amino Acids in the ISM via Gas-Phase Reactions 8
1.3	Comets 9
1.4	Meteorites 11
1.4.1	Sources of Meteoritic Amino Acids (Extraterrestrial versus Terrestrial Contamination) 17
1.4.1.1	Detection of Amino Acids that are Unusual in the Terrestrial Environment 17
1.4.1.2	Determination of the Amino Acid Content of the Meteorite Fall Environment 17
1.4.1.3	Determination of Enantiomeric Ratios 18
1.4.1.4	Determination of Compound-Specific Stable Isotope Ratios of Hydrogen, Carbon, and Nitrogen 18
1.4.2	Synthesis of Meteoritic Amino Acids 19
1.5	Micrometeorites and IDPs 23
1.6	Mars 23
1.7	Delivery of Extraterrestrial Amino Acid to the Earth and its Importance to the Origin of Life 24
1.8	Conclusions 26
	References 27
<b>2</b>	<b>“Terrestrial” Amino Acids and their Evolution 43</b>
	<i>Stephen Freeland</i>
2.1	Introduction 43

2.2	What are the 20 “Terrestrial” Amino Acids?	44
2.2.1	The 21st and 22nd Genetically Encoded Amino Acids	45
2.2.2	Do other Genetically Encoded Amino Acids Await Discovery?	46
2.2.3	Genetic Engineering can Enlarge the Amino Acid Alphabet	47
2.2.4	Significance of Understanding the Origins of the Standard Alphabet	48
2.3	What do We Know about the Evolution of the Standard Amino Acid Alphabet?	49
2.3.1	Nonbiological, Natural Synthesis of Amino Acids	50
2.3.2	Biosynthetic Theories for the Evolutionary Expansion of the Standard Amino Acid Alphabet	53
2.3.3	Evidence for a Smaller Initial Amino Acid Alphabet	55
2.3.4	Proteins as Emergent Products of an RNA World	56
2.3.5	Stereochemical Rationale for Amino Acid Selection	57
2.4	Amino Acids that Life Passed Over: A Role for Natural Selection?	58
2.4.1	Were the Standard Amino Acids Chosen for High Biochemical Diversity?	60
2.4.2	Were the Standard Amino Acids Chosen for “Cheap” Biosynthesis?	62
2.4.3	Were the Standard Amino Acids Chosen to Speed Up Evolution?	62
2.5	Why Does Life Genetically Encode L-Amino Acids?	64
2.6	Summary, Synthesis, and Conclusions	64
	References	66

## Part Two Production/Synthesis of Amino Acids 77

3	<b>Use of Enzymes in the Synthesis of Amino Acids</b>	79
	<i>Theo Sonke, Bernard Kaptein, and Hans E. Schoemaker</i>	
3.1	Introduction	79
3.2	Chemo-Enzymatic Processes to Enantiomerically Pure Amino Acids	80
3.3	Acylase Process	81
3.4	Amidase Process	83
3.4.1	Amidase Process for $\alpha,\alpha$ -Disubstituted $\alpha$ -Amino Acids	86
3.5	Hydantoinase Process	88
3.6	Ammonia Lyase Processes	90
3.6.1	Aspartase-Catalyzed Production of L-Aspartic Acid	91
3.6.2	Production of L-Alanine from Fumaric Acid by an Aspartase-Decarboxylase Cascade	92
3.6.3	Phenylalanine Ammonia Lyase-Catalyzed Production of L-Phenylalanine and Derivatives	93
3.7	Aminotransferase Process	94
3.7.1	Aminotransferase-Catalyzed Production of D- $\alpha$ -H- $\alpha$ -Amino Acids	97

3.8	AADH Process	99
3.9	Conclusions	102
	References	103
<b>4</b>	<b>β-Amino Acid Biosynthesis</b>	<b>119</b>
	<i>Peter Spitteler</i>	
4.1	Introduction	119
4.1.1	Importance of β-Amino Acids and their Biosynthesis	119
4.1.2	Scope of this Chapter	119
4.2	Biosynthesis of β-Amino Acids	120
4.2.1	Biosynthesis of β-Alanine and β-Aminoisobutyric Acid	120
4.2.1.1	β-Alanine	120
4.2.1.2	β-Aminoisobutyric Acid	122
4.2.2	Biosynthesis of β-Amino Acids by 2,3-Aminomutases from α-Amino Acids	122
4.2.2.1	β-Lysine, β-Arginine, and Related β-Amino Acids	124
4.2.2.2	β-Phenylalanine, β-Tyrosine, and Related β-Amino Acids	127
4.2.2.3	β-Glutamate and β-Glutamine	132
4.2.2.4	β-Leucine	132
4.2.2.5	β-Alanine	132
4.2.3	Biosynthesis of α,β-Diamino Acids from α-Amino Acids	132
4.2.3.1	General Biosynthesis of α,β-Diamino Acids	132
4.2.3.2	Structures and Occurrence of α,β-Diamino Acids in Nature	132
4.2.3.3	Biosynthesis of Selected α,β-Diamino Acids	135
4.2.3.3.1	Biosynthesis of β-ODAP	135
4.2.3.3.2	Biosynthesis of the α,β-Diaminopropanoic Acid Moiety in the Bleomycins	136
4.2.3.3.3	Biosynthesis of the Penicillins	137
4.2.3.3.4	Biosynthesis of the Capreomycidine Moiety in Viomycine	137
4.2.3.3.5	Biosynthesis of the Streptolidine Moiety in Streptothrinic F	137
4.2.4	Biosynthesis of α-Keto-β-Amino Acids from α-Amino Acids	139
4.2.5	<i>De Novo</i> Biosynthesis of β-Amino Acids by PKSs	139
4.2.5.1	Introduction	139
4.2.5.2	General Biosynthesis of Polyketide-Type β-Amino Acids	141
4.2.5.3	Structures and Occurrence of Polyketide-Type β-Amino Acids in Nature	142
4.2.5.4	Biosynthesis of Selected Polyketide-Type β-Amino Acids	149
4.2.5.4.1	Long-Chain β-Amino Acids Occurring as Constituents of the Iturins	149
4.2.5.4.2	Biosynthesis of the Ahda Moiety in Microginin	151
4.2.5.4.3	Biosynthesis of the Apha Residue in Bestatin	151
4.2.5.4.4	Biosynthesis of the Adda Residue in the Microcystins	152
4.2.6	β-Amino Acids Whose Biosynthesis is Still Unknown	152
4.3	Conclusions and Future Prospects	154
	References	155

<b>5</b>	<b>Methods for the Chemical Synthesis of Noncoded <math>\alpha</math>-Amino Acids found in Natural Product Peptides</b>	<b>163</b>
	<i>Stephen A. Habay, Steve S. Park, Steven M. Kennedy, and A. Richard Chamberlin</i>	
5.1	Introduction	163
5.2	Noncoded CAAAs	164
5.3	Noncoded Amino Acids by Chemical Modification of Coded Amino Acids	185
5.4	Noncoded Amino Acids with Elaborate Side-Chains	205
5.5	Conclusions	226
	References	226
<b>6</b>	<b>Synthesis of N-Alkyl Amino Acids</b>	<b>245</b>
	<i>Luigi Aurelio and Andrew B. Hughes</i>	
6.1	Introduction	245
6.2	N-Methylation via Alkylation	246
6.2.1	$S_N2$ Substitution of $\alpha$ -Bromo Acids	246
6.2.2	N-Methylation of Sulfonamides, Carbamates, and Amides	249
6.2.2.1	Base-Mediated Alkylation of <i>N</i> -Tosyl Sulfonamides	249
6.2.2.2	Base Mediated Alkylation of <i>N</i> -Nitrobenzenesulfonamides	250
6.2.2.3	N-Methylation via Silver Oxide/Methyl Iodide	252
6.2.2.4	N-Methylation via Sodium Hydride/Methyl Iodide	253
6.2.2.5	N-Methylation of Trifluoroacetamides	257
6.2.2.6	N-Methylation via the Mitsunobu Reaction	257
6.3	N-Methylation via Schiff's Base Reduction	259
6.3.1	Reduction of Schiff's Bases via Transition Metal-Mediated Reactions	259
6.3.2	Reduction of Schiff's Bases via Formic Acid: The Leuckart Reaction	260
6.3.3	Quaternization of Imino Species	261
6.3.4	Reduction of Schiff's Bases via Borohydrides	263
6.3.5	Borane Reduction of Amides	264
6.4	N-Methylation by Novel Methods	265
6.4.1	1,3-Oxazolidin-5-ones	265
6.4.2	Asymmetric Syntheses	272
6.4.3	Racemic Syntheses	277
6.5	N-Alkylation of Amino Acids	280
6.5.1	Borohydride Reduction of Schiff's Bases	280
6.5.1.1	Sodium Borohydride Reductions	281
6.5.1.2	Sodium Cyanoborohydride Reductions	281
6.5.1.3	Sodium Triacetoxyborohydride Reductions	282
6.5.2	N-Alkylation of Sulfonamides	282
6.5.2.1	Base-Mediated Alkylation of Benzene Sulfonamides	282
6.5.3	Reduction of <i>N</i> -Acyl Amino Acids	283
6.5.3.1	Reduction of Acetamides	284

6.5.4	Novel Methods for <i>N</i> -Alkylation of $\alpha$ -Amino Acids	284
6.5.4.1	Asymmetric Synthesis of <i>N</i> -Alkyl $\alpha$ -Amino Acids	284
6.5.4.2	<i>N</i> -Alkylation of 1,3-Oxazolidin-5-ones	284

<b>7</b>	<b>Recent Developments in the Synthesis of <math>\beta</math>-Amino Acids</b>	<b>291</b>
	<i>Yamir Bandala and Eusebio Juaristi</i>	
7.1	Introduction	291
7.2	Synthesis of $\beta$ -Amino Acids by Homologation of $\alpha$ -Amino Acids	291
7.3	Chiral Pool: Enantioselective Synthesis of $\beta$ -Amino Acids from Aspartic Acid, Asparagine, and Derivatives	298
7.4	Synthesis of $\beta$ -Amino Acids by Conjugate Addition of Nitrogen Nucleophiles to Enones	300
7.4.1	Achiral $\beta$ -Amino Acids	300
7.4.2	Enantioselective Approaches	304
7.4.2.1	Addition of "Chiral Ammonia" Equivalents to Conjugated Prochiral Acceptors	304
7.4.2.2	Addition of a Nitrogen Nucleophile to a Chiral Acceptor	306
7.4.2.3	Asymmetric Catalysis	308
7.5	Synthesis of $\beta$ -Amino Acids via 1,3-Dipolar Cycloaddition	312
7.6	Synthesis of $\beta$ -Amino Acids by Nucleophilic Additions	316
7.6.1	Aldol- and Mannich-Type Reactions	316
7.6.2	Morita–Baylis–Hillman-Type Reactions	321
7.6.3	Mannich-Type Reactions	324
7.7	Synthesis of $\beta$ -Amino Acids by Diverse Addition or Substitution Reactions	328
7.8	Synthesis of $\beta$ -Amino Acids by Stereoselective Hydrogenation of Prochiral 3-Aminoacrylates and Derivatives	330
7.8.1	Reductions Involving Phosphorus-Metal Complexes	331
7.8.2	Reductions Involving Catalytic Hydrogenations	333
7.9	Synthesis of $\beta$ -Amino Acids by use of Chiral Auxiliaries: Stereoselective Alkylation	334
7.10	Synthesis of $\beta$ -Amino Acids via Radical Reactions	338
7.11	Miscellaneous Methods for the Synthesis of $\beta$ -Amino Acids	340
7.12	Conclusions	347
7.13	Experimental Procedures	348
7.13.1	Representative Experimental Procedure: Synthesis of ( <i>S</i> )-3-( <i>tert</i> -Butyloxycarbonylamino)-4-phenylbutanoic Acid	348
7.13.2	Representative Experimental Procedure: Synthesis of ( <i>S</i> )-2-(Aminomethyl)-4-phenylbutanoic Acid, ( <i>S</i> )-19	350
7.13.3	Representative Experimental Procedure: Synthesis of $\beta^3$ -Amino Acids by Conjugate Addition of Homochiral Lithium <i>N</i> -Benzyl- <i>N</i> -( $\alpha$ -methylbenzyl)amide	352
7.13.4	Representative Experimental Procedure: Synthesis of Cyclic and Acyclic $\beta$ -Amino Acid Derivatives by 1,3-Dipolar Cycloaddition	353

7.13.5	Representative Experimental Procedure: Synthesis of ( <i>R</i> )-3- <i>tert</i> -Butoxycarbonylamino-3-phenylpropionic Acid Isopropyl Ester using a Mannich-Type Reaction	354
7.13.6	Representative Experimental Procedure: General Procedure for the Hydrogenation of ( <i>Z</i> )- and ( <i>E</i> )- $\beta$ -(Acylamino) acrylates by Chiral Monodentate Phosphoramidite Ligands	354
7.13.7	Representative Experimental Procedure: Synthesis of Chiral $\alpha$ -Substituted $\beta$ -Alanine	355
7.13.8	Representative Experimental Procedure: Synthesis of Chiral $\beta$ -Amino Acids by Diastereoselective Radical Addition to Oxime Esters	357

<b>8</b>	<b>Synthesis of Carbocyclic <math>\beta</math>-Amino Acids</b>	<b>367</b>
	<i>Loránd Kiss, Enikő Forró, and Ferenc Fülöp</i>	
8.1	Introduction	367
8.2	Synthesis of Carbocyclic $\beta$ -Amino Acids	368
8.2.1	Synthesis of Carbocyclic $\beta$ -Amino Acids via Lithium Amide-Promoted Conjugate Addition	369
8.2.2	Synthesis of Carbocyclic $\beta$ -Amino Acids by Ring-Closing Metathesis	371
8.2.3	Syntheses from Cyclic $\beta$ -Keto Esters	372
8.2.4	Cycloaddition Reactions: Application in the Synthesis of Carbocyclic $\beta$ -Amino Acids	375
8.2.5	Synthesis of Carbocyclic $\beta$ -Amino Acids from Chiral Monoterpene $\beta$ -Lactams	377
8.2.6	Synthesis of Carbocyclic $\beta$ -Amino Acids by Enantioselective Desymmetrization of <i>meso</i> Anhydrides	378
8.2.7	Miscellaneous	379
8.2.8	Synthesis of Small-Ring Carbocyclic $\beta$ -Amino Acid Derivatives	383
8.3	Synthesis of Functionalized Carbocyclic $\beta$ -Amino Acid Derivatives	385
8.4	Enzymatic Routes to Carbocyclic $\beta$ -Amino Acids	393
8.4.1	Enantioselective <i>N</i> -Acylations of $\beta$ -Amino Esters	394
8.4.2	Enantioselective <i>O</i> -Acylations of <i>N</i> -Hydroxymethylated $\beta$ -Lactams	394
8.4.3	Enantioselective Ring Cleavage of $\beta$ -Lactams	395
8.4.4	Biotransformation of Carbocyclic Nitriles	396
8.4.5	Enantioselective Hydrolysis of $\beta$ -Amino Esters	396
8.4.6	Analytical Methods for the Enantiomeric Separation of Carbocyclic $\beta$ -Amino Acids	397
8.5	Conclusions and Outlook	398
8.6	Experimental Procedures	399
8.6.1	Synthesis of Hydroxy Amino Ester Ethyl (1 <i>R</i> <sup>*</sup> ,2 <i>S</i> <sup>*</sup> ,4 <i>S</i> <sup>*</sup> )-2-(Benzoyloxycarbonylamino)-4-hydroxycyclohexanecarboxylate (205a) by Oxirane Ring Opening of with Sodium Borohydride	399

8.6.2	Synthesis of Bicyclic $\beta$ -Lactam ( $1R^*,5S^*$ )-6-azabicyclo[3.2.0]hept-3-en-7-one (223) by the Addition of Chlorosulfonyl Isocyanate to Cyclopentadiene 399
8.6.3	Synthesis of $\beta$ -Amino Ester Ethyl <i>cis</i> -2-aminocyclopent-3-enecarboxylate Hydrochloride (223a) by Lactam Ring-Opening Reaction of Azetidinone 223 400
8.6.4	Synthesis of Epoxy Amino Ester Ethyl ( $1R^*,2R^*,3R^*,5S^*$ )-2-( <i>tert</i> -butoxycarbonylamino)-6-oxabicyclo[3.1.0]hexane-3-carboxylate (225) by Epoxidation of Amino Ester 224 400
8.6.5	Synthesis of Azido Ester Ethyl ( $1R^*,2R^*,3R^*,4R^*$ )-4-Azido-2-( <i>tert</i> -butoxycarbonylamino)-3-hydroxycyclopentanecarboxylate (229) by Oxirane Ring Opening of with Sodium Azide 401
8.6.6	Isomerization of Azido Amino Ester to Ethyl ( $1S^*,2R^*,3R^*,4R^*$ )-4-Azido-2-( <i>tert</i> -butoxycarbonylamino)-3-hydroxycyclopentanecarboxylate (230) 401
8.6.7	Lipase-Catalyzed Enantioselective Ring Cleavage of 4,5-Benzo-7-azabicyclo[4.2.0]octan-8-one (271), Synthesis of ( $1R,2R$ )- and ( $1S,2S$ )-1-Amino-1,2,3,4-tetrahydronaphthalene-2-carboxylic Acid Hydrochlorides (307 and 308) 402
8.6.8	Lipase-Catalyzed Enantioselective Hydrolysis of Ethyl <i>trans</i> -2-aminocyclohexane-1-carboxylate (298), Synthesis of ( $1R,2R$ )- and ( $1S,2S$ )-2-Aminocyclohexane-1-carboxylic Acid Hydrochlorides (309 and 310) 404

14.10	Cyclic $\gamma$ -Amino Acids	644
14.10.1	Cyclopropyl $\gamma$ -Amino Acids	644
14.10.2	Cyclobutyl $\gamma$ -Amino Acids	648
14.10.3	Cyclopentyl $\gamma$ -Amino Acids	653
14.10.4	Cyclohexyl $\gamma$ -Amino Acids	663
14.11	Conclusions	666
14.12	Experimental Procedures	666
14.12.1	(R)-2-Ethyl-4-nitrobutan-1-ol (36c)	666
14.12.2	<i>N</i> -tert-Butyl- <i>N</i> -( <i>p</i> -chlorophenylethyl) $\alpha$ -Diazoacetamide	669
14.12.3	(R)-5-[(1-Oxo-2-( <i>tert</i> -butoxycarbonylamo)-3-phenyl)-propyl]-2,2-dimethyl-1,3-dioxane-4,6-dione	670
14.12.4	(R)- and (S)-[2-(Benzoyloxy) ethyl]oxirane	671

14.12.5	Dimethyl ( <i>S,S</i> )-(-)-3- <i>N,N</i> -bis( $\alpha$ -Methylbenzyl)-amino-2-oxopropylphosphonate	672
14.12.6	Boc-L-leucinal	673
14.12.7	Cross-Coupling of <i>N-tert</i> -Butylsulfinyl Imine and <i>tert</i> -Butyl 3-oxopropanoate	674
14.12.8	(1' <i>S,4S</i> )-4-Bromomethyl-1-(1-phenyleth-1-yl)-pyrrolidin-2-one	675
14.12.9	(+)-(R,S)-4-Amino-2-cyclopentene-1-carboxylic Acid	676
	References	677
