### Preface IX

<b>1</b>	<b>Microwave Synthesis – An Introduction</b>	<b>1</b>
	References	5
<b>2</b>	<b>Microwave Theory</b>	<b>11</b>
2.1	Microwave Radiation	11
2.2	Microwave Dielectric Heating	12
2.3	Dielectric Properties	15
2.4	Microwave versus Conventional Thermal Heating	19
2.5	Microwave Effects	20
2.5.1	Temperature Monitoring in Microwave Chemistry	22
2.5.2	Thermal Effects (Kinetics)	28
2.5.3	Specific Microwave Effects	31
2.5.4	Non-Thermal (Athermal) Microwave Effects	37
	References	42
<b>3</b>	<b>Equipment Review</b>	<b>45</b>
3.1	Introduction	45
3.2	Domestic Microwave Ovens	46
3.3	Dedicated Microwave Reactors for Organic Synthesis	47
3.4	Single-Mode Instruments	51
3.4.1	Biotage AB	51
3.4.1.1	Initiator Platform	51
3.4.1.2	Emrys Platform (2000–2004)	54
3.4.1.3	Chemspeed SWAVE	55
3.4.2	CEM Corporation	56
3.4.2.1	Discover Platform	56
3.4.2.2	Explorer <sub>PLS</sub> Systems	58
3.4.2.3	Voyager Systems	58
3.4.2.4	Peptide Synthesizers	59

3.4.3	Milestone s.r.l.	62
3.5	Multimode Instruments	62
3.5.1	Anton Paar GmbH	62
3.5.1.1	Rotors and Vessels	64
3.5.2	Biotage AB	67
3.5.3	CEM Corporation	68
3.5.3.1	MARS Scale-Up System Accessories	69
3.5.3.2	MARS Parallel System Accessories	70
3.5.4	Milestone s.r.l.	72
3.5.4.1	MultiSYNTH System	73
3.5.4.2	MicroSYNTH Labstation	75
3.5.4.3	StartSYNTH	80
3.5.4.4	Scale-Up Systems	81
3.5.4.5	RotoSYNTH	84
	References	85
<b>4</b>	<b>Microwave Processing Techniques</b>	<b>87</b>
4.1	Solvent-Free Reactions	87
4.2	Phase-Transfer Catalysis	91
4.3	Open- versus Closed-Vessel Conditions	94
4.4	Pre-Pressurized Reaction Vessels	98
4.5	Non-Classical Solvents	102
4.5.1	Water as Solvent	102
4.5.2	Ionic Liquids	106
4.6	Passive Heating Elements	112
4.7	Processing Techniques in Drug Discovery and High-Throughput Synthesis	115
4.7.1	Automated Sequential versus Parallel Processing	116
4.7.2	High-Throughput Synthesis Methods	127
4.7.2.1	Solid-Phase Synthesis	128
4.7.2.2	Soluble Polymer-Supported Synthesis	131
4.7.2.3	Fluorous-Phase Organic Synthesis	133
4.7.2.4	Polymer-Supported Reagents, Catalysts and Scavengers	134
4.8	Scale-Up in Batch and Continuous Flow	138
4.8.1	Scale-Up in Batch and Parallel	141
4.8.2	Scale-Up Using Continuous Flow Techniques	143
4.8.3	Scale-Up Using Stop Flow Techniques	148
4.8.4	Flow-Through Techniques using Microreactors	150
	References	153
<b>5</b>	<b>Starting With Microwave Chemistry</b>	<b>161</b>
5.1	Why Use Microwave Reactors?	161
5.2	Getting Started – Method Development	162
5.2.1	Open or Closed Vessels?	163
5.2.2	Choice of Solvent	165

5.2.3	Temperature, Time and Microwave Power	167
5.2.4	Microwave Instrument Software	172
5.2.5	Reaction Optimization	173
5.3	Additional Aspects	176
5.3.1	Temperature Measurement	176
5.3.2	Simultaneous Cooling	177
5.3.3	Filling Volume	178
5.3.4	The Importance of Stirring	179
5.3.5	Pressure Release	179
5.3.6	Inert Atmosphere	180
5.3.7	Multiple Heating Steps	181
5.3.8	Reaction Monitoring	182
5.3.9	Reaction Scale versus Instrument	182
5.4	Equipment/Maintenance	184
5.5	General Suggestions	185
5.6	Safety Aspects	187
5.7	Advantages and Limitations	192
5.8	Frequently Asked Questions (FAQs)	194
	References	200
<b>6</b>	<b>Experimental Protocols</b>	<b>203</b>
6.1	General Small-Scale Sealed-Vessel Microwave Processing	206
6.1.1	Organic Medium	206
6.1.1.1	Base-Catalyzed Ester Formation	206
6.1.1.2	Knoevenagel Condensation	209
6.1.1.3	Williamson Ether Synthesis	211
6.1.1.4	Grignard Reaction	213
6.1.1.5	Heck Reaction – Heterogeneous Catalyst	216
6.1.1.6	Oxidative Aromatization	218
6.1.1.7	Oxidation of Borneol	220
6.1.1.8	Diels–Alder Reaction	223
6.1.2	Low-Absorbing Organic Medium – Passive Heating Elements	225
6.1.2.1	<i>N</i> -Alkylation of Pyrazole	225
6.1.3	Aqueous Medium	228
6.1.3.1	<i>N</i> -Acetylation of <i>p</i> -Chloroaniline	228
6.1.3.2	Dihydroindazolone Synthesis	231
6.1.4	Neat Reaction Medium	234
6.1.4.1	Imine Synthesis	234
6.1.4.2	<i>N</i> -Formylation of 2-Nitroaniline	236
6.2	Reaction Optimization	238
6.2.1	Empirical Optimization – Hydrolysis of Benzamide	238
6.2.2	Optimization using Statistical Methods (DoE) – Synthesis of Monastrol	241
6.3	Library Generation	245
6.3.1	Automated Sequential Library Generation	245

6.3.1.1	Hantzsch Synthesis	245
6.3.1.2	Biginelli Synthesis	249
6.3.2	Parallel Library Generation	254
6.3.2.1	Biginelli Synthesis	254
6.4	Reaction Scale-Up	258
6.4.1	Single Batch Mode	258
6.4.1.1	Synthesis of Aspirin on a 10 and 100 mmol Scale	258
6.4.1.2	Suzuki Reaction under Closed- and Open Conditions (1.5, 15, 150 mmol)	261
6.4.2	Parallel Scale-Up	266
6.4.2.1	Biginelli Reaction	266
6.4.3	Flow Mode	269
6.4.3.1	Fischer Indole Synthesis	269
6.5	Special Processing Techniques	272
6.5.1	Fractional Product Distillation (Open-Vessel)	272
6.5.1.1	Pyranoquinoline Synthesis	272
6.5.2	Reactions with Gaseous Components	275
6.5.2.1	Ethoxycarbonylation with Carbon Monoxide	275
6.5.2.2	Aminocarbonylation with Molybdenum Hexacarbonyl	278
6.5.3	High-Temperature Processing	281
6.5.3.1	Hydrolysis of Ethyl Benzoate in Near-Critical Water (NCW)	281
6.5.4	Solid-Phase Peptide Synthesis	284
6.5.4.1	Synthesis of a Nonapeptide	284
	References	289
