Preface XI

List of Contributors XV

1	Modeling Catalytic Reactions on Surfaces with Density Functional Theory	1
	<i>John A. Keith, Josef Anton, Payam Kaghazchi, and Timo Jacob</i>	
1.1	Introduction	1
1.2	Theoretical Background	2
1.2.1	The Many-Body Problem	2
1.2.2	Born–Oppenheimer Approximation	3
1.2.3	Wave Function-Based Methods	4
1.2.3.1	Hartree–Fock Approximation	4
1.2.3.2	Post Hartree–Fock Methods	5
1.2.4	Density-Based Methods	6
1.2.4.1	The Thomas–Fermi Model	7
1.2.4.2	The Hohenberg–Kohn Theorems	7
1.2.4.3	The Kohn–Sham Equations	9
1.2.4.4	Exchange–Correlation Functionals	10
1.2.5	Technical Aspects of Modeling Catalytic Reactions	13
1.2.5.1	Geometry Optimizations	13
1.2.5.2	Transition-State Optimizations	14
1.2.5.3	Vibrational Frequencies	14
1.2.5.4	Thermodynamic Treatments of Molecules	16
1.2.5.5	Considering Solvation	17
1.2.6	Model Representation	19
1.2.6.1	Slab/Supercell Approach	19
1.2.6.2	Cluster Approach	21
1.3	The Electrocatalytic Oxygen Reduction Reaction on Pt(111)	22
1.3.1	Water Formation from Gaseous O ₂ and H ₂	24
1.3.1.1	O ₂ Dissociation	25
1.3.1.2	OOH Formation	27
1.3.1.3	HOOH Formation	28
1.3.2	Simulations Including Water Solvation	28

1.3.2.1	Langmuir–Hinshelwood Mechanisms	30
1.3.2.2	Eley–Rideal Reactions	31
1.3.3	Including Thermodynamical Quantities	32
1.3.3.1	Langmuir–Hinshelwood and Eley–Rideal Mechanisms	33
1.3.4	Including an Electrode Potential	35
1.4	Conclusions	36
	References	37
2	Dynamics of Reactions at Surfaces	39
	<i>Axel Groß</i>	
2.1	Introduction	39
2.2	Theoretical and Computational Foundations of Dynamical Simulations	41
2.3	Interpolation of Potential Energy Surfaces	43
2.4	Quantum Dynamics of Reactions at Surfaces	45
2.5	Nondissociative Molecular Adsorption Dynamics	49
2.6	Adsorption Dynamics on Precovered Surfaces	55
2.7	Relaxation Dynamics of Dissociated H ₂ Molecules	59
2.8	Electronically Nonadiabatic Reaction Dynamics	62
2.9	Conclusions	66
	References	67
3	First-Principles Kinetic Monte Carlo Simulations for Heterogeneous Catalysis: Concepts, Status, and Frontiers	71
	<i>Karsten Reuter</i>	
3.1	Introduction	71
3.2	Concepts and Methodology	73
3.2.1	The Problem of a Rare Event Dynamics	73
3.2.2	State-to-State Dynamics and kMC Trajectories	75
3.2.3	kMC Algorithms: from Basics to Efficiency	77
3.2.4	Transition State Theory	80
3.2.5	First-Principles Rate Constants and the Lattice Approximation	84
3.3	A Showcase	88
3.3.1	Setting up the Model: Lattice, Energetics, and Rate Constant Catalog	88
3.3.2	Steady-State Surface Structure and Composition	90
3.3.3	Parameter-Free Turnover Frequencies	95
3.3.4	Temperature-Programmed Reaction Spectroscopy	99
3.4	Frontiers	102
3.5	Conclusions	107
	References	108
4	Modeling the Rate of Heterogeneous Reactions	113
	<i>Lothar Kunz, Lubow Maier, Steffen Tischer, and Olaf Deutschmann</i>	
4.1	Introduction	113
4.2	Modeling the Rates of Chemical Reactions in the Gas Phase	115
4.3	Computation of Surface Reaction Rates on a Molecular Basis	116

4.3.1	Kinetic Monte Carlo Simulations	116
4.3.2	Extension of MC Simulations to Nanoparticles	120
4.3.3	Reaction Rates Derived from MC Simulations	124
4.3.4	Particle–Support Interaction and Spillover	125
4.3.5	Potentials and Limitations of MC Simulations for Derivation of Overall Reaction Rates	125
4.4	Models Applicable for Numerical Simulation of Technical Catalytic Reactors	128
4.4.1	Mean Field Approximation and Reaction Kinetics	129
4.4.2	Thermodynamic Consistency	131
4.4.3	Practicable Method for Development of Multistep Surface Reaction Mechanisms	134
4.4.4	Potentials and Limitations of the Mean Field Approximation	139
4.5	Simplifying Complex Kinetic Schemes	141
4.6	Summary and Outlook	142
	References	143
5	Modeling Reactions in Porous Media	149
	<i>Frerich J. Keil</i>	
5.1	Introduction	149
5.2	Modeling Porous Structures and Surface Roughness	152
5.3	Diffusion	158
5.4	Diffusion and Reaction	163
5.5	Pore Structure Optimization: Synthesis	173
5.6	Conclusion	175
	References	175
6	Modeling Porous Media Transport, Heterogeneous Thermal Chemistry, and Electrochemical Charge Transfer	187
	<i>Robert J. Kee and Huayang Zhu</i>	
6.1	Introduction	187
6.2	Qualitative Illustration	189
6.3	Gas-Phase Conservation Equations	190
6.3.1	Gas-Phase Transport	191
6.3.2	Chemical Reaction Rates	191
6.3.3	Boundary Conditions	192
6.4	Ion and Electron Transport	192
6.5	Charge Conservation	194
6.5.1	Effective Properties	195
6.5.2	Boundary Conditions	195
6.5.3	Current Density and Cell Potential	196
6.6	Thermal Energy	196
6.7	Chemical Kinetics	196
6.7.1	Thermal Heterogeneous Kinetics	197
6.7.2	Charge Transfer Kinetics	198

6.7.3	Butler–Volmer Formulation	204
6.7.4	Elementary and Butler–Volmer Formulations	206
6.8	Computational Algorithm	207
6.9	Button Cell Example	207
6.9.1	Polarization Characteristics	208
6.9.2	Electric Potentials and Charged Species Fluxes	208
6.9.3	Anode Gas-Phase Profiles	212
6.9.4	Anode Surface Species Profiles	213
6.9.5	Applicability and Extensibility	214
6.10	Summary and Conclusions	214
6.10.1	Greek Letters	217
	References	218
7	Evaluation of Models for Heterogeneous Catalysis	221
	<i>John Mantzaras</i>	
7.1	Introduction	221
7.2	Surface and Gas-Phase Diagnostic Methods	222
7.2.1	Surface Science Diagnostics	222
7.2.2	<i>In Situ</i> Gas-Phase Diagnostics	223
7.3	Evaluation of Hetero/Homogeneous Chemical Reaction Schemes	225
7.3.1	Fuel-Lean Combustion of Methane/Air on Platinum	225
7.3.1.1	Heterogeneous Kinetics	225
7.3.1.2	Gas-Phase Kinetics	228
7.3.2	Fuel-Lean Combustion of Propane/Air on Platinum	231
7.3.3	Fuel-Lean Combustion of Hydrogen/Air on Platinum	234
7.3.4	Fuel-Rich Combustion of Methane/Air on Rhodium	238
7.3.5	Application of Kinetic Schemes in Models for Technical Systems	240
7.4	Evaluation of Transport	242
7.4.1	Turbulent Transport in Catalytic Systems	243
7.4.2	Modeling Directions in Intraphase Transport	245
7.5	Conclusions	246
	References	248
8	Computational Fluid Dynamics of Catalytic Reactors	251
	<i>Vinod M. Janardhanan and Olaf Deutschmann</i>	
8.1	Introduction	251
8.2	Modeling of Reactive Flows	253
8.2.1	Governing Equations of Multicomponent Flows	253
8.2.2	Turbulent Flows	256
8.2.3	Three-Phase Flow	256
8.2.4	Momentum and Energy Equations for Porous Media	257
8.3	Coupling of the Flow Field with Heterogeneous Chemical Reactions	258
8.3.1	Given Spatial Resolution of Catalyst Structure	258
8.3.2	Simple Approach for Modeling the Catalyst Structure	259

8.3.3	Reaction Diffusion Equations	260
8.3.4	Dusty Gas Model	261
8.4	Numerical Methods and Computational Tools	262
8.4.1	Numerical Methods for the Solution of the Governing Equations	263
8.4.2	CFD Software	264
8.4.3	Solvers for Stiff ODE and DAE Systems	264
8.5	Reactor Simulations	264
8.5.1	Flow through Channels	265
8.5.2	Monolithic Reactors	268
8.5.3	Fixed Bed Reactors	271
8.5.4	Wire Gauzes	273
8.5.5	Catalytic Reactors with Multiphase Fluids	273
8.5.6	Material Synthesis	275
8.5.7	Electrocatalytic Devices	277
8.6	Summary and Outlook	278
	References	279
9	Perspective of Industry on Modeling Catalysis	283
	<i>Jens R. Rostrup-Nielsen</i>	
9.1	The Industrial Challenge	283
9.2	The Dual Approach	285
9.3	The Role of Modeling	287
9.3.1	Reactor Models	287
9.3.2	Surface Science and Breakdown of the Simplified Approach	288
9.3.3	Theoretical Methods	290
9.4	Examples of Modeling and Scale-Up of Industrial Processes	291
9.4.1	Ammonia Synthesis	291
9.4.2	Syngas Manufacture	294
9.4.2.1	Steam Reforming	294
9.4.2.2	Autothermal Reforming	297
9.5	Conclusions	298
	References	300
10	Perspectives of the Automotive Industry on the Modeling of Exhaust Gas Aftertreatment Catalysts	303
	<i>Daniel Chatterjee, Volker Schmeißer, Marcus Frey, and Michel Weibel</i>	
10.1	Introduction	303
10.2	Emission Legislation	304
10.3	Exhaust Gas Aftertreatment Technologies	306
10.4	Modeling of Catalytic Monoliths	308
10.5	Modeling of Diesel Particulate Filters	313
10.6	Selective Catalytic Reduction by NH_3 (Urea-SCR) Modeling	315
10.6.1	Kinetic Analysis and Chemical Reaction Modeling	316
10.6.1.1	NH_3 Adsorption, Desorption, and Oxidation	316
10.6.1.2	NO-SCR Reaction	316

10.6.1.3	NH ₃ –NO–NO ₂ Reactions	317
10.6.2	Influence of Washcoat Diffusion	319
10.7	Diesel Oxidation Catalyst, Three-Way Catalyst, and NO _x Storage and Reduction Catalyst Modeling	319
10.7.1	Diesel Oxidation Catalyst	320
10.7.2	Three-Way Catalyst	321
10.7.3	NO _x Storage and Reduction Catalyst	321
10.7.3.1	Species Transport Effects Related to NSCR: Shrinking Core Model	326
10.7.3.2	NH ₃ Formation During Rich Operation within a NSRC	327
10.8	Modeling Catalytic Effects in Diesel Particulate Filters	328
10.9	Determination of Global Kinetic Parameters	329
10.10	Challenges for Global Kinetic Models	330
10.11	System Modeling of Combined Exhaust Aftertreatment Systems	331
10.12	Conclusion	335
	References	339
