**List of Contributors** XIX

<b>1</b>	<b>Gecko-Inspired Nanomaterials</b>	<b>1</b>
	<i>Christian Greiner</i>	
1.1	The Gecko and Its Adhesion Capabilities	1
1.1.1	What are Setae?	1
1.1.2	Walking on the Ceiling	3
1.2	The Physics of Gecko Adhesion	4
1.2.1	Contact Splitting	4
1.2.2	Adhesion Design Maps	6
1.3	Fabrication Methods for Gecko-Inspired Adhesives	8
1.3.1	Soft-Molding	8
1.3.2	Nanostructured Adhesive Surfaces	11
1.3.2.1	Hot Embossing	11
1.3.2.2	Filling Nanoporous Membranes	11
1.3.2.3	Electron-Beam Lithography	12
1.3.2.4	Carbon Nanotubes	13
1.3.2.5	Drawing Polymer Fibers	13
1.3.2.6	Hierarchical Adhesive Surfaces	14
1.3.2.7	3-D Structured Adhesive Surfaces	16
1.3.2.8	Switchable Adhesive Surfaces Made from Responsive Materials	17
1.4	Measuring Adhesion	17
1.4.1	What Actually is Measured?	17
1.4.2	How is Adhesion Measured?	20
1.5	What Have We Learned About Fibrillar Adhesives?	22
1.5.1	Contact Splitting	22
1.5.2	Aspect Ratio	23
1.5.3	Tip Geometry	24
1.5.4	Young's Modulus	25
1.5.5	Backing Layer	25
1.5.6	Tilt Angle	26
1.5.7	Hierarchy	27

1.5.8	Experimental Parameters that Influence Measurements	28
1.5.8.1	Adhesion Tests: Indentation versus Peeling	28
1.5.8.2	Indenter Geometry	29
1.5.8.3	Humidity	29
1.5.9	Other Approaches and Factors	30
1.6	Applications in the Life Sciences	30
1.7	Summary and Future Perspectives	33
	References	34
<b>2</b>	<b>Tooth-Inspired Nanocomposites</b>	<b>41</b>
	<i>Janet Moradian-Oldak and Yuwei Fan</i>	
2.1	Introduction	41
2.1.1	Biologically Formed Nanocomposites	42
2.1.2	Nanocomposite Synthesis	44
2.2	Enamel	45
2.2.1	Enamel Hierarchical Structure	46
2.2.2	Molecular Mechanisms in Amelogenesis (Enamel Formation)	47
2.2.2.1	Amelogenin	48
2.2.2.2	Other Enamel Proteins	50
2.2.3	Synthesis of Enamel-Like Organized Apatite Crystals	52
2.2.4	Amelogenin-Based Nanocomposites	54
2.2.4.1	Controlled Crystallization of Apatite by Amelogenin	54
2.2.4.2	Biomimetic Coatings Using Simulated Body Fluid	56
2.2.4.3	Amelogenin-Apatite Coatings Using Electrodeposition (ELD)	57
2.2.4.4	Bioinspired Remineralization of Enamel	61
2.3	Dentin	64
2.3.1	Types of Dentin	65
2.3.2	Dentin Hierarchical Structure	65
2.3.3	Molecular Mechanisms in Dentinogenesis (Dentin Formation)	66
2.3.3.1	Collagen	67
2.3.3.2	Noncollagenous Extracellular Matrix Proteins	67
2.3.4	Collagen–Calcium Phosphate Nanocomposites	69
2.3.4.1	Biomimetic Collagen Mineralization Using SBF	69
2.3.4.2	Bioinspired Mineralization of Collagen	71
2.3.4.3	Collagen-Apatite Coating in Modified SBF	73
2.3.4.4	Collagen-Apatite Coating by Electrodeposition	73
2.3.5	Dentin Remineralization	75
2.4	Summary and Future Perspective	76
	Acknowledgments	77
	Abbreviations	77
	References	78

	<i>Andrew P. Loeffler and Peter X. Ma</i>	
3.1	Introduction	89
3.2	Biomimetic Material Properties	91

3.2.1	Scaffold Surface and Pore Structure	91
3.2.2	Scaffold Biodegradability	92
3.2.3	Scaffold Mechanical Properties	93
3.2.4	Scaffold Biocompatibility and Cellular Interactions	94
3.3	Nanofiber Scaffold Fabrication Methods	94
3.3.1	Electrospinning	95
3.3.2	Self-Assembly	97
3.3.3	Phase Separation	99
3.3.3.1	Pre-designed Macropores	100
3.3.3.2	Solid Freeform Fabrication	101
3.4	Modification of Nanofibrous Scaffolds	103
3.4.1	Scaffold Surface Modifications	104
3.4.2	Inorganic Composite Scaffolds	105
3.4.3	Factor Delivery Scaffolds	107
3.5	Biological Effects of Nanofibers	110
3.5.1	Cell Attachment and Morphology	110
3.5.2	Proliferation	112
3.5.3	Differentiation and Tissue Formation	113
3.6	Conclusions	115
	References	116

<b>5</b>	<b>Biomimetic and Bioinspired Self-Assembled Peptide Nanostructures</b>	<b>151</b>
	<i>Francesco Pampaloni and Andrea Masotti</i>	
5.1	Introduction	151
5.1.1	Some Key Principles of Biological Self-Assembly	151
5.1.2	Biological Self-Assembly in Nanotechnology	152
5.2	Peptide-Based Self-Assembling Nanomaterials	152
5.2.1	Alpha-Helical Coiled-Coil	153
5.2.1.1	Self-Assembly Mechanism of Coiled-Coils	153

5.2.1.2	De Novo-Designed $\alpha$ -Helix Coiled-Coil Nanofibers	154
5.2.2	$\beta$ -Sheet Structures	158
5.2.2.1	Amyloid Fibrils	158
5.2.2.2	De Novo-Designed $\beta$ -Sheet Materials	160
5.2.2.3	Collagen-Based Assemblies	162
5.3	Matrices for Tissue Engineering and Regenerative Medicine	164
5.3.1	Peptide–Amphiphile Nanofiber Matrices	166
5.3.1.1	Molecular Structure	166
5.3.1.2	Self-Assembly and Physical–Biochemical Properties	166
5.3.1.3	Applications in 3-D Cell Cultures	168
5.3.1.4	Applications in Regenerative Medicine	169
5.3.2	Beta-Sheet Nanofiber Matrices (“Designer Peptides”)	170
5.3.2.1	Molecular Structure	170
5.3.2.2	Self-Assembly Mechanism and Biophysical Properties	172
5.3.2.3	Applications in 3-D Cell Cultures	172
5.3.2.4	Applications in Regenerative Medicine	173
5.3.2.5	Local Delivery of Molecules	174
5.3.3	Beta-Hairpin Peptides	175
5.3.3.1	Molecular Structure	175
5.3.3.2	Self-Assembly Mechanism and Biophysical Properties	176
5.3.3.3	Applications in 3-D Cell Cultures	177
5.3.3.4	Applications in Regenerative Medicine	177
5.4	Virus-Based and Virus-Inspired Nanomaterials	177
5.4.1.1	Nanomechanical Properties of Virus Capsids	178
5.4.2	Applications of Viruses in Nanotechnology	180
5.4.2.1	Virus-Based Nanostructures and Self-Organizing Assemblies	181
5.4.2.2	Virus-Like Particles Encapsulating Non-Genetic Molecular Cargos	185
5.4.2.3	Synthetic Viruses	187
5.4.2.4	Functionalization of Virus Capsids	189
5.4.2.5	Viruses as Templates for Programmed Synthesis of Nanomaterials	193
5.5	Biomimetic Nanotubes	194
5.5.1	Properties of Nanotubes	194
5.5.2	Peptide and Protein Nanotubes	195
5.5.3	Cellular Microtubules	198
5.5.3.1	Self-Assembly and Structure of Microtubules	198
5.5.3.2	Microtubule Bundles	199
5.5.3.3	Prospect: Insights from MT for Nanotechnology	199
	Acknowledgments	200

## 12 Natural and Modified Nanomaterials for Environmental Applications 429

*Guodong Yuan*

- 12.1 Introduction 429
- 12.2 Aluminosilicate Nanomaterials 431
  - 12.2.1 Occurrence and Structure of Natural Aluminosilicate Nanomaterials 431
  - 12.2.2 Surface Properties of Aluminosilicate Nanomaterials 434
    - 12.2.2.1 Surface Area 434
    - 12.2.2.2 Porosity 435
    - 12.2.2.3 Surface Charge and Functional Groups 435
  - 12.2.3 Surface Modification of Aluminosilicate Nanomaterials 436
    - 12.2.3.1 Acid Activation 436
    - 12.2.3.2 Thermal Treatment 437
    - 12.2.3.3 Intercalation 437
    - 12.2.3.4 Pillaring 438
    - 12.2.3.5 Chemical Modifications of Allophane and Imogolite 439
- 12.3 Environmental Applications of Aluminosilicate Nanomaterials 440
  - 12.3.1 Adsorbents of Metal Ions 440
  - 12.3.2 Adsorbents of Anions 443
  - 12.3.3 Adsorbents of Nonionic Organic Compounds 446
  - 12.3.4 Adsorbents of Gases 448
- 12.4 Assessment of Aluminosilicate Nanomaterials for Environmental Applications 450
- 12.5 Summary and Future Perspectives 452
- Acknowledgments 453
- References 453

## 13 S-Layer Protein Lattices Studied by Scanning Force Microscopy 459

*Dietmar Pum, Jilin Tang, Peter Hinterdorfer, Jose-Luis Toca Herrera, and Uwe B. Sleytr*

- 13.1 Introduction 459
- 13.2 Description of S-Layer Proteins 460

13.2.1	Occurrence, Location, and Ultrastructure	460
13.2.2	S-Layer Fusion Proteins	461
13.2.3	S-Layer Self-Assembly	462
13.2.4	Crystal Growth at Interfaces	462
13.3	S-Layer Protein Microstructures	465
13.3.1	Photolithography	465
13.3.2	Soft Lithography: Micromolding in Capillaries	466
13.3.3	Soft Lithography: Microcontact Printing	468
13.4	S-Layer Protein Reassembly at Interphases	469
13.4.1	High-Resolution Imaging of S-Layer Lattices in Contact Mode	469
13.4.2	Force–Distance Curves	470
13.4.3	Probing the Mechanical Properties of S-Layers	470
13.4.4	Controlled Unzipping of S-Layer Protein Lattices	471
13.5	S-Layer Proteins Lattices with Functional Groups for Recognition Imaging and Molecule Templating	472
13.5.1	Principles of Single-Molecule Recognition Force Spectroscopy	472
13.5.2	Single-Molecule Recognition Force Spectroscopy Investigations on S-Layers	474
13.5.3	MAC Mode AFM Imaging	478
13.5.4	Principles of Topography and Recognition Imaging	481
13.5.5	Topography and Recognition Imaging of S-Layer	481
13.5.6	Fabrication of Molecule and Nanoparticle Arrays Templated by S-Layer Lattices	484
13.6	Reassembly of S-Layer Proteins on Solid Supports with Modified Surface Properties	488
13.6.1	Hydrophilic versus Hydrophobic Supports	488
13.6.2	Reassembly on Mica	488
13.6.3	Reassembly on Silicon Substrates	490
13.6.4	Reassembly on Silanized Silicon Substrates	491
13.6.5	Polyelectrolyte Multilayers	491
13.6.6	Dialkyldisulfide Derivatives	495
13.6.7	Chemical, Thermal, and Mechanical Stability	495
13.7	Applications	499
13.8	Summary and Conclusions	501
	Acknowledgments	502
	References	503
