

## Contents

Preface *XV*

### Part One mRNA Biology 1

#### 1 Introduction 3

- 1.1 RNA Building Blocks 4
- 1.2 RNA Folding 6
- 1.3 The RNA World Hypothesis 10
- 1.4 Functions of RNA 11
- 1.5 Protein Classes that are Required for RNA Function 12
  - 1.5.1 RNA Binding Proteins 12
    - 1.5.1.1 Proteins that Interact with Single Stranded RNAs 12
    - 1.5.1.2 Proteins that Interact with Double Stranded RNAs 14
  - 1.5.2 RNA Helicases 14
- References 15

#### 2 Transcription of Pre-mRNAs 17

- 2.1 Structure and Organization of Protein Coding Genes 18
- 2.2 Transcription of mRNAs by RNA Polymerase II 20
  - 2.2.1 Transcriptional Initiation of Protein Coding Genes 23
  - 2.2.2 Regulation of Transcriptional Initiation of RNA Polymerase II 27
  - 2.2.3 Transition from Preinitiation to Initiation and Promoter Clearance 27
  - 2.2.4 Productive Elongation of mRNA Transcripts 29
    - 2.2.4.1 The Nucleotide Addition Cycle (NAC) 29
    - 2.2.4.2 Protein Factors that Influence Pol II Elongation 30
- 2.3 Transcriptional Termination of Pre-mRNAs 31
- 2.4 Transcription is Coupled to Other mRNA Maturation Steps 32
- 2.5 Summary 34
- References 35

#### 3 Capping of the Pre-mRNA 5' End 37

- 3.1 m<sup>7</sup>G-cap Structure 37
- 3.2 mRNA Capping Enzymes 39

3.2.1	RNA Triphosphatase	39
3.2.2	Guanylyltransferase	39
3.2.3	Guanine-N7-Methyltransferase	40
3.3	5' Capping is Coupled to Transcription	41
3.4	5' Cap Binding Proteins	41
3.5	Summary	42
	References	43
<b>4</b>	<b>3' End Processing of Pre-mRNAs</b>	<b>45</b>
4.1	Polyadenylation Signals	46
4.2	Proteins Involved in 3' End Processing of Pre-mRNAs	47
4.2.1	Cleavage and Polyadenylation Specific Factor (CPSF)	47
4.2.2	Cleavage Stimulation Factor (CstF)	47
4.2.3	Mammalian Cleavage Factor I (CFI <sub>m</sub> ) and II (CFII <sub>m</sub> )	48
4.2.4	The Poly(A) Polymerase (PAP)	49
4.2.5	Poly(A)-Binding Protein (PABP)	50
4.2.6	Symplekin	51
4.3	3' End Processing is Tightly Linked to Transcriptional Termination	51
4.4	Alternative Polyadenylation	51
4.5	Cytoplasmic Polyadenylation	53
4.6	3' End Processing of Histone mRNAs	54
4.7	Summary	56
	References	57
<b>5</b>	<b>Splicing of Eukaryotic Pre-mRNAs</b>	<b>59</b>
5.1	Group I, II and III Introns	59
5.1.1	Group I Introns	59
5.1.2	Group II Introns	61
5.1.3	Group III Introns	61
5.2	The Mechanism of pre-mRNA Splicing	61
5.3	The Spliceosome	62
5.4	The U12-Dependent Minor Spliceosome	66
5.5	Coupling of Splicing with Transcription and 5' Capping	67
5.6	Alternative Splicing and the Complexity of Genomes	68
5.6.1	Mechanisms of Exon Inclusion into the Mature mRNA	69
5.6.2	Mechanism of Exon Exclusion from the Mature mRNA	70
5.7	Summary	70
5.8	Questions	71
	References	72
<b>6</b>	<b>mRNA Export from the Nucleus to the Cytoplasm</b>	<b>73</b>
6.1	Nuclear Import and Nuclear Export	73
6.2	mRNA Export Receptors	75

6.3	Adaptors that Bridge mRNAs with Export Receptors	78
6.4	Mechanism of mRNA Export	78
6.5	Coupling of mRNP Export to Other Steps of mRNA Maturation	80
6.6	Summary	80
6.7	Questions	81
	References	81
<b>7</b>	<b>Translation</b>	<b>83</b>
7.1	Amino Acids, mRNAs, tRNAs	83
7.1.1	mRNA	83
7.1.2	Amino Acids	84
7.1.3	Transfer RNAs (tRNAs)	86
7.1.4	Loading Amino Acids onto tRNAs	87
7.2	The Ribosome	89
7.3	The Mechanisms of Translation	90
7.3.1	Translation Initiation	90
7.3.1.1	Eukaryotes	90
7.3.1.2	Bacteria	93
7.3.1.3	Archaea	96
7.3.1.4	Internal Ribosome Entry Sites (IRESs)	96
7.3.2	Elongation	97
7.3.2.1	Polyribosomes	97
7.3.3	Termination	99
7.3.4	Recycling of the Ribosome	100
7.4	Translational Regulation	100
7.4.1	Regulation of Translation Initiation	100
7.4.2	Regulation of Translation Elongation and Termination	103
7.5	Coupling Translation with Other mRNA Maturation and Quality Control Steps	103
7.6	Summary	104
7.7	Questions	105
	References	106
<b>8</b>	<b>Deadenylation of mRNA</b>	<b>107</b>
8.1	Deadenylating Enzymes	107
8.1.1	Poly(A) Nuclease	107
8.1.2	CCR4-NOT Complex	108
8.1.3	Poly(A) Ribonuclease	108
8.1.4	Other Deadenylases	110
8.2	Summary	111
8.3	Questions	111
	References	112

<b>9</b>	<b>mRNA Decapping</b>	<b>113</b>
9.1	Decapping Enzymes are the Core of the mRNA Decapping Machinery	113
9.2	Scavenger Decapping Enzyme DcpS	115
9.3	Regulation of mRNA Decapping	115
9.3.1	Inhibitors of Decapping	115
9.3.2	Enhancers of Decapping	116
9.4	Intracellular Localization of mRNA Decapping	117
9.5	Summary	118
9.6	Questions	119
	References	119
<b>10</b>	<b>mRNA Decay Pathways</b>	<b>121</b>
10.1	Deadenylation-Dependent mRNA Decay	122
10.1.1	The 5' to 3' Exoribonuclease Xrn1	122
10.1.2	The Exosome	122
10.1.2.1	Structural Organization of the Exosome	125
10.1.2.2	Mechanism of Exosome-Mediated RNA Degradation	125
10.1.2.3	Regulation of Exosome Activity	126
10.2	Deadenylation-Independent mRNA Decay	127
10.3	Endoribonuclease-Mediated mRNA Decay	128
10.3.1	Eukaryotic Endoribonucleases	129
10.4	Regulation of mRNA Decay	131
10.5	RNA Degradation in Bacteria	131
10.6	Summary	133
10.7	Questions	134
	References	135
<b>11</b>	<b>mRNA Quality Control</b>	<b>137</b>
11.1	Nuclear mRNA Quality Control Mechanisms	137
11.1.1	MRNP Retention at the Transcription Site	138
11.1.2	MRNP Quality Control at the Nuclear Pore Complex	138
11.2	Nonsense-Mediated mRNA Decay (NMD)	138
11.2.1	Protein Factors Required for NMD	139
11.2.1.1	UPF Proteins	139
11.2.1.2	The Exon–Exon–Junction Complex (EJC) and NMD	140
11.2.1.3	SMG Proteins and the Phosphorylation of UPF1	141
11.2.2	Mechanism of NMD in Mammals	142
11.2.3	Cytoplasmic Processing Bodies and NMD	143
11.2.4	Mechanism of NMD in Yeast and Flies	144
11.2.5	mRNA Degradation Pathways in NMD	146
11.3	Other mRNA Quality Control Pathways	146
11.3.1	Non-Stop mRNA Degradation	146

- 11.3.2 No-Go mRNA Decay (NGD) 148
- 11.4 Summary 148
- 11.5 Questions 149
- References 149

## Part Two Non-Coding RNA Biology 151

- 12 Ribosomal RNAs and the Biogenesis of Ribosomes 153**
  - 12.1 Genomic Organization of Ribosomal RNA Genes 153
    - 12.1.1 Bacteria and Archaea 153
    - 12.1.2 Eukaryotes 155
      - 12.1.2.1 28S, 18S and 5.8S rRNAs 155
      - 12.1.2.2 5S rRNA 156
  - 12.2 Transcription of Ribosomal RNA Genes 157
    - 12.2.1 RNA Polymerase I 157
      - 12.2.1.1 Initiation of Pol I Transcription 158
      - 12.2.1.2 Promoter Clearance, Transcript Elongation and Termination of Pol I Transcription 160
      - 12.2.1.3 Regulation of RNA Polymerase I Transcription 161
    - 12.2.2 RNA Polymerase III and the Transcription of the 5S rRNA 162
      - 12.2.2.1 Pol III Promoters 163
      - 12.2.2.2 Transcription Initiation and Elongation of RNA Polymerase III 165
      - 12.2.2.3 Initiation of Type 3 Promoters 167
      - 12.2.2.4 Termination and Re-Initiation 168
  - 12.3 Maturation of rRNAs 169
    - 12.3.1 Small Nucleolar RNAs are Required for Pre-rRNA Processing 170
  - 12.4 Assembly of Ribosomal Subunits 172
  - 12.5 Nuclear Export of Ribosomal Subunits 174
  - 12.6 Modification, Structure and Function of rRNAs 175
  - 12.7 Summary 178
  - 12.8 Questions 179
  - References 180
- 13 Transfer RNAs 183**
  - 13.1 Genomic Organization and Transcription of tRNA Genes 183
  - 13.2 Processing to Mature tRNAs 184
    - 13.2.1 5' Maturation of tRNAs by the RNase P Enzyme Complex 184
    - 13.2.2 3' End Maturation of tRNAs 186
    - 13.2.3 tRNA Splicing 188
  - 13.3 tRNA Modifications 191
  - 13.4 Nuclear Export of tRNAs 193
  - 13.5 Tertiary Structure of tRNAs 194

13.6	Summary	196
	References	197
<b>14</b>	<b>The 7SL RNA and the Signal Recognition Particle</b>	<b>199</b>
14.1	Architecture of the SRP	199
14.1.1	The SRP RNA	199
14.1.2	Protein Components of the SRP	201
14.1.2.1	Eukaryotes	201
14.1.2.2	Archaea and Bacteria	203
14.2	SRP-Mediated Protein Translocation	204
14.3	Summary	206
	References	208
<b>15</b>	<b>Regulation of Transcription: the 7SK Small Nuclear RNA</b>	<b>209</b>
15.1	Architecture of the 7SK snRNA	209
15.1.1	The 7SK snRNA	209
15.1.2	Protein Components of the 7SK snRNP	210
15.2	The 7SK snRNP Functions as Transcriptional Regulator	212
15.2.1	P-TEFb Function in Transcription	212
15.2.2	Repression of P-TEFb by the 7SK snRNP	214
15.3	Other Small Non-Coding RNAs that Interfere with Transcription	214
15.3.1	The 6S RNA in Bacteria	214
15.3.2	Alu, B1 and B2 Non-Coding RNAs in Mammals	215
15.4	Summary	215
	References	216
<b>16</b>	<b>Small Nucleolar RNAs</b>	<b>217</b>
16.1	Genomic Organization and snoRNA Transcription	217
16.2	Box H/ACA snoRNAs	218
16.3	Box C/D snoRNAs	221
16.4	Maturation of Functional snoRNPs	223
16.5	Orphan snoRNAs	224
16.6	The Telomerase RNP	226
16.7	Summary	227
	References	228
<b>17</b>	<b>Spliceosomal Small Nuclear RNAs</b>	<b>229</b>
17.1	Transcription and Maturation of Spliceosomal snRNAs	229
17.1.1	Transcription of Spliceosomal snRNAs	229
17.1.2	snRNA Maturation	230
17.1.3	SnRNA Export to the Cytoplasm	231
17.2	The Structure of UsnRNPs	232
17.2.1	Secondary Structure of Spliceosomal snRNAs	232
17.2.2	Protein Composition of UsnRNPs	233

17.2.2.1	The Sm/LSm Core Structure	233
17.2.2.2	UsnRNP-Specific Proteins	235
17.3	Assembly of Spliceosomal snRNPs	237
17.3.1	Cytoplasmic Assembly of the Sm Core Domain	237
17.3.2	Formation of the Tri-Methyl Guanine Cap	240
17.3.3	Import of Assembled UsnRNPs into the Nucleus	241
17.4	Summary	242
17.5	Questions	243
	References	244
<b>18</b>	<b>Small Non-Coding RNAs and the Mechanism of Gene Silencing</b>	<b>245</b>
18.1	Short Interfering RNAs and the Mechanism of RNA Interference	245
18.2	Dicer	248
18.3	RNA-Dependent RNA Polymerases	248
18.4	Argonaute Proteins	251
18.5	microRNAs and the Regulation of Gene Expression	251
18.5.1	MiRNA Biogenesis	251
18.5.2	Non-Canonical miRNA Biogenesis Pathways	253
18.5.3	miRNA Functions	255
18.5.3.1	miRNAs Can Act as siRNAs	255
18.5.3.2	miRNAs Inhibit Translation	255
18.5.3.3	miRNAs Induce Deadenylation and mRNA Decay	256
18.6	PiRNAs and the Regulation of Mobile Genetic Elements in the Germ Line	257
18.6.1	Transposons as Driving Force Behind Evolution	258
18.6.2	PiRNAs Control Transposon Expression	259
18.7	Small RNAs with Functions in Chromatin Regulation	261
18.8	The CRISPR System – A Bacterial and Archaeal Defense Mechanism	263
18.8.1	The CRISPR Locus	263
18.8.2	Acquisition of CRISPR-Mediated Resistance	264
18.8.3	Mechanism of CRISPR Activity	265
18.9	Summary	266
	References	269
<b>19</b>	<b>Long Non-Coding RNAs</b>	<b>271</b>
19.1	The XIST Non-Coding RNA and X Chromosome Inactivation	271
19.1.1	The X-Chromosome Inactivation Center (XIC)	272
19.1.2	The XIST Non-Coding RNA and the Mechanism of X Inactivation	272
19.1.3	Regulation of XIST Function	274
19.2	Dosage Compensation in Flies	275

19.3	Non-Coding RNAs and the Regulation of Imprinting	276
19.4	The Regulation of HOX Genes by Long Non-Coding RNAs	278
19.5	Long non-Coding RNAs are Common in Complex Genomes	278
19.6	Summary	278
	References	280
<b>20</b>	<b>RNA Editing</b>	<b>281</b>
20.1	RNA Editing by U Insertions or Deletions	281
20.1.1	Mechanisms of U Insertions or Deletions	282
20.2	RNA Editing by Base Modification	283
20.2.1	C to U Conversion	284
20.2.2	Adenine to Inosine Editing	286
20.2.2.1	Adenosine Deaminase Acting on RNA	287
20.2.2.2	Editing Site Selectivity	288
20.2.2.3	Biological Consequences of A to I Conversions	288
20.3	Summary	290
	References	291
<b>21</b>	<b>Ribozymes – Catalytic RNA Molecules</b>	<b>293</b>
21.1	Identification of Catalytic RNAs	293
21.2	Mechanisms and Secondary Structures of Different Ribozymes	294
21.2.1	Group I Introns	294
21.2.2	RNase P	295
21.2.3	The Diels–Alderase Ribozyme	296
21.2.4	Hammerhead Ribozymes	298
21.2.5	The <i>glmS</i> Ribozyme	298
21.3	Summary	300
	References	301
<b>22</b>	<b>Riboswitches and RNA Sensors</b>	<b>303</b>
22.1	Mechanisms of Riboswitch Function	303
22.2	Riboswitch Structures	305
22.3	RNA Thermometers	305
22.4	Summary	307
	References	308
<b>23</b>	<b>RNomics</b>	<b>309</b>
23.1	“Omics” Approaches	309
23.2	Experimental RNA Profiling Strategies	310
23.2.1	Northern Blotting	310
23.2.2	Microarray	311
23.2.3	Quantitative PCR	313

23.2.4	RNA Fluorescent <i>In Situ</i> Hybridization	314
23.2.5	Next Generation Sequencing	314
23.3	RNA Biology and the Complexity of Genomes	315
23.4	Summary	315
	References	318

**Appendix: Answers to Questions** 319

**Index** 355
