

## Index

### **a**

achiral rhodium catalysts 211  
 acremoauxin A/oxazinin 3 255, 257  
 – synthesis 255–257  
 2-acyl imidazoles, cleavage 38  
 adducts elaboration 30  
 – enantioenriched indole-substituted 30  
 – – aldehydes 30  
 – – carboxylic acids 30  
 – – ketones 30  
 air-stable chiral P/S ligands 153  
 Akiyama cyclic transitions 74  
 alcoholic moiety 70  
 – bifunctional mode of action 71  
 alcoholic solvent 24, 25  
 – direct activation 181  
 – direct nucleophilic substitution 182  
 – enantioselectivity 24  
 – *iBuOH* 24  
 – transition state 25  
 aldehydes/ketones addition 101  
 – electron-rich aromatic/heteroaromatic compounds 102  
 – heterogeneous catalysis 118  
 – organocatalysis 116  
 – organometallic catalysis 102  
 – – chiral bisoxazoline-Cu(II) catalysis 108  
 – – chiral titanium (IV) catalysis 103  
 aliphatic enones 32  
 – Friedel–Crafts alkylation 32  
 alkaloid synthesis 134  
 alkenes 208  
 – Lewis/Brønsted acid-catalyzed hydroarylation procedures 204  
 – Rh-catalyzed hydroarylation 208  
 – substitution effect 214  
 – – on rhodium-catalyzed enantioselective alkylation 214

alkenylindoles 214, 216  
 – enantioselective hydroarylation 216  
 – Pt(II)-catalyzed enantioselective hydroarylation 214–216  
 – – ligand/solvent effect 215  
 alkoxycarenes 104  
 – Friedel–Crafts reaction 104  
 – chiral BINOL-Ti complex 104  
 β-alkyl 2-acyl imidazoles 35  
 – alkylation products 35  
 alkylanilines compounds 280, 281  
 alkylated product conversion 37, 43  
 – imidazole to carboxylic acid derivatives 37  
 – tryptophan analog 43  
 alkylating agent 6–9, 272  
 alkylation 207  
 – aromatic aldimines 209–211  
 – aromatic ketimines 207–209  
 alkylidene malonates 19–25, 42, 43  
 – catalytic asymmetric Friedel–Crafts reaction 42, 43  
 – – experimental procedure 42, 43  
 – – transition state 42  
 – enantioselective Friedel–Crafts alkylation reactions 20, 22, 24, 25  
*N*-alkyl indoles 72  
 – derivatives 72  
 – Friedel–Crafts alkylation reaction 72  
 – – bisulfonamide catalyzed with nitroalkenes 72  
 allenes 146, 160, 161, 163  
 – Au-catalyzed hydroarylation mechanistic cycle 163  
 – catalytic cycloarylation reactions 146  
 – catalytic hydrofunctionalization with indoles 161  
 – gold(I)-mediated intramolecular hydroarylation with indoles 161

- metallo-catalyzed hydroarylation 160
- allenylindoles 217–219
- Au(I)-catalyzed enantioselective hydroarylation 217, 218
- enantioselective hydroarylation 218, 219
- allylation reactions 157
- catalytic systems 157
- allyl cross-coupling reaction mechanism 148
- Pd-catalyzed 148
- allylic alkylation processes 147, 153
- intermolecular approach 147
- – asymmetric allylations 152
- – benzene-like compounds 147
- – indoles 150
- intramolecular approach 156–160
- $\alpha$ -amino acid synthesis 250, 252
- 2-aminobutenolides synthesis 247–249
- aminoindane/arene substitution effect 213
- on enantioselective hydroarylation 213
- p*-aminomandelic acid derivatives 250
- aminomethyl indoles synthesis 229–240
- annulation processes, effective catalyst 161
- antihypertensive drug precursor 243, 244
- pyrrolo[1,2-a]pyrazine 244
- synthesis 244
- arenes 8, 102, 157, 158, 162, 163, 176, 186, 203, 204, 249
- catalytic intramolecular alkylation 157, 158
- – via allyl alcohols 158
- enantioselective alkylation 203
- enantioselective functionalizations 8
- Friedel–Crafts alkylation 186, 249–253
- Friedel–Crafts-type reactions 102
- – with  $\alpha$ -dicarbonyl compounds 102
- gold-catalyzed hydroarylation 162
- gold-catalyzed regio/diastereoselective alkylation 176
- hydroarylation procedure 163, 204
- intramolecular alkylation 158
- metal-carbene intermediate 204
- thiourea-gold-catalyzed intramolecular diastereoselective cycloalkylation 176
- aromatic aldimines 212, 213
- enantioselective cyclization 212
- aromatic amines 105, 108, 109, 114
- enantioselective ethyl glyoxylate catalyzed Friedel–Crafts reaction 105, 108, 109, 114
- by BINOL-titanium complex 105
- – titanium-catalyzed 114
- aromatic C–H bonds, asymmetric addition 101
- aromatic compounds 1, 26, 101, 102, 110, 119, 148
- 1,3-dimethoxybenzene 26
- asymmetric imines Friedel–Crafts reaction 119
- asymmetric/enantioselective carbonyl compounds alkylation, via 1,2-addition 102
- enantioselective Friedel–Crafts reaction with ethyl trifluoropyruvate 110, 111
- Friedel–Crafts (FC) alkylation 1
- Friedel–Crafts carbonyl compounds reaction 101
- functionalization 148
- $\pi$ -rich 53
- – asymmetric Friedel–Crafts alkylation by iminium catalysis 53
- reaction conditions 13
- aromatic epoxides 173, 176
- gold-catalyzed cycloalkylation 176
- indoles addition 173
- aromatic ethers 114, 116
- catalytic enantioselective ethyl trifluoropyruvate Friedel–Crafts reaction 114, 116
- – solvent-free conditions 114, 116
- aromatic imines 211
- rhodium-catalyzed enantioselective hydroarylation 211
- aromatic ketimines 207, 209, 215
- enantioselective intramolecular hydroarylation 209, 215
- – rhodium-catalyzed 215
- aromatic nucleophiles 54
- $\pi$ -nucleophiles 56
- site-specific alkylation 54
- aromatic process 282
- hydroxyalkylation 282
- aromatic rings 158
- aromatic substrates 49, 50
- enantioselective Michael additions 49, 50
- aromatic systems 88, 109, 150
- gold(III) chloride-catalyzed allylic alkylation, with allylic alcohols 150
- Julolidine 109
- *N*-methylindoline 109
- *N*-methyltetrahydroquinoline 109
- stereoselective alkylations 88
- aryl-alcohols 159
- Friedel–Crafts allylic cycloalkylation 159
- aryl aldimines 211
- asymmetric aminocatalysis process 23, 50, 55, 61
- application 55

asymmetric electrophilic aromatic substitutions 8  
 asymmetric Friedel–Crafts reactions 115  
 – alkylations 12, 167  
 – – allylic 145  
 – – chiral organocatalysis 12  
 – – model 114  
 – copper(II)-catalyzed 115  
 asymmetric organometallic catalysis 9  
 atropisomerization process 206  
 – atropisomers interconversion 206  
 – atropselective alkylation 206  
 – – rhodium(I)-catalyzed protocol 206  
 – bis-indole preparation 192  
 aza-Achmatowicz reaction 248  
 aza-Friedel–Crafts reaction 120  
 aza-Wittig reaction 121

**b**  
 bench-stable catalysts 116  
 benzamide 203, 204  
 – enantioselective ortho-alkylation 203  
 – enantioselective ortho-hydroarylation 204  
 benzene 273  
 – Friedel–Crafts reactions, atom economy 273  
 benzotriazole 77, 78  
 – asymmetric addition 77, 78  
 benzylic stereocenters 145, 146  
 – synthesis 145  
 – vinyl units 146  
 benzylidene malonates 23  
 – enantioselective Friedel–Crafts alkylation reactions 23  
 N-benzyltryptamine 138  
 – asymmetric Pictet–Spengler reaction 138  
 $\text{BF}_3$ -mediated reactions 183, 184  
 biaryls 206  
 – atropselective alkylation 206, 207  
 bidentate Michael acceptors 17  
 bifunctional catalysts, use 67, 75  
 BINOL ligand 106  
 BINOL-Ti complexes 104  
 – catalytic efficiency 104  
 – catalyzed asymmetric reactions 105  
 – zirconium adducts 11  
 biomimetic acid-catalyzed ring closure 254  
 biosynthetic cyclization process 75  
 2,2'-bipyridyl copper(II) complex 113  
 – chiral nonracemic C2-symmetric 113  
 – enantioselective Friedel–Crafts alkylation reactions 113  
 bis-*N,N*-aryl thiourea catalysts 71  
 – X-ray structure 72

bis-prophenol ligand 89  
 bis(oxazoline) ligands 22, 23, 41  
 – aza-bis(oxazolines) 23  
 – copper complexes 23  
 – use 22  
 bis(oxazolinyl)pyridine (pybox)-scandium(III) trflate complexes 32  
 bisindole, formation 27  
 BOX catalytic system 90  
 – ligands 84, 113  
 – Mg catalyst 250  
 – zinc/copper complexes 88  
 (*R*)-6,6'-Br<sub>2</sub>-BINOL-Ti complex 104  
 Brønsted–Lowry acids 3, 4, 8, 18, 27, 62, 67, 68, 75  
 – assisted activation 28  
 Brønsted base, functionality 78  
 Brown's allylborane reagent 260  
 (+)-bruguierol C synthesis 260, 266  
 butenolide synthesis 248, 249

**c**  
 calcination process 274  
 carbon–carbon bond formation reactions 149, 150, 152  
 – coupling alkylation reaction 149  
 – enantioselective coupling reaction 103  
 – mechanism 150  
 – ruthenium(IV)-catalyzed 149, 150  
 – stereoselective formation 49  
 – – Friedel–Crafts alkylation strategy 49  
 – tentative mechanistic cycle 149  
 carbonyl compounds addition, *see* aldehydes/ketones addition  
 carbonyl electrophile, role 105  
 carbonyl-ene reaction 105  
 – Corey's transition-state model 105  
 catalyst structure-enantiodifferentiation profile 117  
 catalytic activation concept, *see* iminium catalysis  
 catalytic asymmetric Friedel–Crafts alkylation reactions 1, 19, 223  
 – bidentate templates 19  
 – synthesis 223  
 catalytic Friedel–Crafts reaction 115  
 – b/w aromatic amines and ethyl glyoxylate 115  
 – – by chiral bisoxazoline-copper (II) complex 115  
 catalytic stereoselective reactions 167  
 catalytic system(s) 17, 31, 35, 62, 121, 152  
 – chemical efficiencies 17  
 – chiral entities 62

- features 35
- pyrrole derivatives 35
- stereochemical efficiencies 17
- catalytic transformations, importance 22
- cationic [(Tol-BINAP)Pd(II)] complexes 39
  - binding interaction 39
  - cationic zirconocene complexes 204
  - C–C double bonds 145
  - hydroarylation 145
  - nucleophilic allylic alkylation 145
- chalcones 64
- enantioselective Friedel–Crafts alkylation 64
  - by chiral Brønsted acids catalyst 64
- chelating compounds 18
- Chen's working hypothesis 75
- chiral acetate 188
- AuCl<sub>3</sub>-catalyzed diastereoselective alkylation 188
- chiral acid catalyst 63
- chiral aldimine derivates 213
- rhodium-catalyzed cyclization 213
- chiral aluminium complex 60
- BINOL-based ligand 60
- chiral 1-aryl-2,2,2-trifluoroethanol derivatives 104
- synthetic route 104
- chiral benzylic alcohols 182
  - carbocation, diastereotopic faces 182
- chiral BINAP-Cu(I) complex 250
- chiral BINOL-based phosphoric acid 63
- chiral boron reagents 134
- Pictet–Spengler reaction 134
- chiral Brønsted acids 69, 120, 124, 126, 228
  - catalyzed reaction 228
- chiral carbocations 183
- enantioenriched precursors preparation/separation 183
- chiral ferrocenyl compounds 193
  - Friedel–Crafts reactions 193
- chiral hydrogen bond donors, application 116
- chiral imidazoline-aminophenol ligand 86
  - CD spectroscopy 86
  - combinatorial HTS method 86
- chiral ketoester catalyst 113
- coordination geometry 113
- chiral Lewis acid 5, 10, 18, 120
- catalysts 81, 130
- catalyzed reactions 18, 77
- organometallic 103
- plausible coordination patterns of complexes 18
- chiral metal complexes 18, 40, 80
  - chiral ligand 23
  - pool 18
- chiral organic molecules 123
- thioureas 123
- ureas 123
- chiral organometallic catalysts 10
- pictorial representation 10
- chiral phosphorus-ligands 11
  - BINAP 11
  - DPPBA-based ligands 11
  - ferrocenyl ligands 11
  - phosphoramidites 11
- chiral phosphoric acid (CPA) 124, 127, 128, 130, 136, 231, 242
- Pictet–Spengler reaction 136
- chiral secondary amine catalysis, *see* asymmetric aminocatalysis process
- chiral silane Lewis acid 121, 124
- asymmetric Friedel–Crafts reaction 124
  - with benzoyl hydrazones 124
- chiral titanium (IV) catalysis 103
- catalyst 106
- reaction pathway 103
- chromane synthesis 251–253
- via intramolecular Friedel–Crafts alkylation 251
- via tandem oxa-Michael addition 251
- chromatographic purification 40
- S-(1,3-benzoxazol-2-yl) thioester conversion 40
  - into amides 40
  - into esters 40
- cinchona alkaloids 116
- cinchonidine 116
- cinchonine 116
- derived thioureas 119
- cinnamate esters 20
- Friedel–Crafts alkylation 20, 21
- clays 277
- properties 277
- solid acids 277, 278
- coordinating solvents 24
  - CCl<sub>4</sub> 24
  - CH<sub>2</sub>Cl<sub>2</sub> 24
  - toluene 24
  - TTCE 24
- Corey's transition-state model 106
- COX-2 inhibitor 53, 224, 232
  - synthesis 224, 232
  - using MacMillan catalyst 224
- cyclic ethers 168
  - arene-mediated ring-opening 168
  - pyrans 168
  - THF 168

cyclization reaction 56  
 – asymmetric organocascade 56  
 – aminocatalytic conjugate addition-halogenation sequence 56  
 –  $\alpha$ -chlorination step 56  
 – domino conjugate addition 56

**d**

Davis oxaziridine reagent 241  
 decarbonylation process 211  
 – rhodium-catalyzed 211  
 Detal process 279  
*N,N*-dialkylamino aromatics 104  
 – Friedel–Crafts reaction 104  
 diarylamines/phenothiazines alkylation reactions 281  
 diastereoisomers separation 41  
 – flash chromatography 41  
 diastereoselective Friedel–Crafts reactions 181, 182, 226, 253  
 – coupling 264  
 – gold-catalyzed 187  
 1,2-dicarbonyl derivatives 108  
 – *p*-chlorophenylglyoxal 108  
 – methyl pyruvate 108  
 dicarboxylic acids 280  
 – precursors 280  
 – – 2,6-diisopropylphthalene 280  
 – – 4,4'-diisopropyl biphenyl 280  
 Diels–Alder reactions 272  
 4,7-dihydroindoles 131  
 – CPA-catalyzed asymmetric Friedel–Crafts reaction 131  
 – – with *N*-sulfonyl imines 131  
 1,3-dimethoxybenzene 119  
 – enantioselective alkylation 119  
 – – solid-supported catalyst 119  
 – – with ethyl 3,3,3-trifluoropyruvate 119  
*N,N*-dimethylaniline 112  
 – enantioselective hydroxalkylation reaction 112  
 N-directing group effect 210  
 – on enantioselective hydroarylation 210  
 dodecylbenzenesulfonic acid (DBSA) 194  
 double hydrogen bond interaction 69, 70  
 – *b/w* ureas and nitroarenes 69

**e**

electron-deficient alkenes 68, 69, 76  
 – 1,2,3-triazoles 76  
 electron-deficient arenes 158  
 – intramolecular allylic alkylation 158  
 – – via In(III)-catalysis 158  
 electron-deficient heteroaromatics 54

electron-donating groups (EDGs) 3, 146, 249  
 electron-rich arenes 17, 18, 34, 104, 148, 149, 162, 171  
 – asymmetric alkylations 18  
 – catalytic enantioselective fluoral catalyzed Friedel–Crafts reaction 104  
 – – by BINOL-titanium complex 104  
 – Friedel–Crafts-type allylations 149  
 – Friedel–Crafts alkylation 34, 171  
 – indoles 18  
 – intramolecular hydroarylation 162  
 – – with gold(I)-catalysis 162  
 – Mo-catalyzed allylation 148  
 – pyrroles 18  
 electron-rich aromatic compounds 65, 112, 148  
 – aniline 112  
 – benzenes cycloalkylation 178  
 – – Friedel–Crafts mechanism vs. auration-based pathway 178  
 – enantioselective Friedel–Crafts reactions 120  
 – – with  $\alpha$ -imino ester 120  
 – Friedel–Crafts alkylation reaction 65  
 – – with glyoxylate/trifluoropyruvate 112  
 – indole derivatives 112  
 – transition-metal-catalyzed alkylation 148  
 electron-rich furans 88  
 – lack of reactivity 88  
 – 2-methylfuran 88  
 – phenylfuran 88  
 electron-rich heteroaromatic compounds 121  
 – catalytic system 121  
 – furans 121  
 – pyrroles 121  
 – thiophenes 121  
 electron-rich heteroaromatic systems 90  
 – chiral Lewis acid catalyzed Friedel–Crafts alkylation 90  
 electron-rich heterocycles 80
