Foreword	V
About the Editors	XLI
Preface	XLIII
List of Contributors	XLV

Contents to Volume 1

Part I	Principles of Enzyme Catalysis	1
1	Introduction – Principles and Historical Landmarks of Enzyme Catalysis in Organic Synthesis	3
	<i>Harald Gröger and Yasuhisa Asano</i>	
1.1	General Remarks	3
1.2	Potential of Enzymes as Catalysts in Organic Synthesis: Enzyme Reactions Overview	4
1.2.1	Enzyme Catalysts: Three-Dimensional Structure and General Properties	4
1.2.2	Overview of Enzyme Classes (EC Numbers) and Related Reactions	5
1.2.3	Overview of Coenzymes and Cofactors and Applications in Organic Synthesis	11
1.2.4	Factors Affecting Enzymatic Reactions	13
1.2.5	Why Use Enzymes in Organic Synthesis? Factors Affecting Enzymatic Reactions, Advantages and Drawbacks	14
1.3	The Early Steps: From Fermentation to Biotransformations Using Wild-Type Whole Cells	17
1.3.1	Historical Development of Fermentation and First Microbial Transformations	17
1.3.2	Development of Practical Synthesis of Chemicals via Transformations Using Wild-Type Whole Cells in Non-Immobilized Form	19
1.3.3	Development of Practical Synthesis of Chemicals via Transformations Using Wild-Type Whole Cells in Immobilized Form	20

1.4	Chemical Processes with Isolated Enzymes: The Impact of Process Engineering	22
1.4.1	Historical Development of Transformations with Isolated Enzymes	22
1.4.2	Development of Practical Synthesis of Chemicals via Transformations Using Isolated Enzymes in Immobilized (Solid-Supported) Form	23
1.4.3	Development of Practical Synthesis of Chemicals via Transformations Using Isolated Enzymes in “Free” Form	24
1.5	Towards Tailor-Made Enzymes: Principles in Enzyme Screening and Protein Engineering Methodologies	26
1.5.1	Tools for Enzyme Discovery	26
1.5.2	Protein Engineering Methodologies	28
1.6	“Hybridization” of Enzyme Catalysis with Organic Syntheses: New Opportunities for Industrial Production of Chemicals and Drugs	31
1.6.1	Applications of Tailor-Made Recombinant Whole-Cell Catalysts in Organic Synthesis	32
1.6.2	Novel Retrosynthetic Approaches in Drug Synthesis: From Enzyme Catalysis in Chemoenzymatic Multistep Processes towards New Drug Production Pathways in Industry	34
1.6.3	Recent Aspects of Applications of Enzymes in Organic Synthesis	38
1.7	Summary and Outlook	39
	References	39
2	Concepts in Biocatalysis	43
	<i>Eduardo García-Urdiales, Iván Lavandera, and Vicente Gotor</i>	
2.1	Introduction	43
2.2	Types of Biocatalytic Processes	45
2.2.1	Dealing with Racemates: Kinetic Resolutions (KRs)	46
2.2.2	Overcoming the <i>ee</i> Limitation of KRs: Parallel Kinetic Resolutions (PKRs)	48
2.2.3	Overcoming the Yield Limitation of KRs	50
2.2.3.1	Dealing with Prochiral or <i>Meso</i> Compounds: Desymmetrizations	50
2.2.3.2	(Cyclic) Deracemizations (CycDs)	52
2.2.3.3	Enantioconvergent Processes (ECPs)	54
2.2.3.4	Dynamic Kinetic Resolutions (DKRs)	54
2.2.3.5	Dynamic Kinetic Asymmetric Transformations (DYKATs): Types I and II	56
2.2.4	Dealing with Diastereomers: DYKATs Types III and IV	58
2.2.5	Making it at Once: Cascade or Domino Processes	60
2.2.6	Novel Concepts	61
2.3	Summary and Outlook	63
	References	63

3	Discovery of Enzymes	67
	<i>Wolfgang Aehle and Juergen Eck</i>	
3.1	Introduction	67
3.1.1	Historical Overview	67
3.1.2	The “Ideal Enzyme” Concept	70
3.2	Exploiting Functional Sequence Space: Resources and Screening Strategies	72
3.2.1	Resources for Enzyme Discovery	72
3.2.2	Screening Strategies	73
3.3	Enzyme Discovery Techniques	74
3.3.1	Gene Mining	74
3.3.2	Sequence Homology-Based Screening	75
3.3.3	Expression of Active Enzymes for Activity-Based Screening	76
3.3.4	Activity-Based Screening	78
3.4	Challenges in Enzyme Screening	81
3.5	Concluding Remarks	82
	References	83
4	Rational Design of Enzymes	89
	<i>Jürgen Pleiss</i>	
4.1	Enzyme Design: Learn from Nature	89
4.2	Today: Find and Improve Enzymes	90
4.2.1	Data Mining: Find Appropriate Biocatalysts in Databases	90
4.2.2	Rational Evolution: Improve Efficiency of Directed Evolution	93
4.2.3	Molecular Modeling and Protein Design of Stability, Specificity, and Selectivity	94
4.2.3.1	Prediction of Enzyme Structure	94
4.2.3.2	Prediction of Protein Stability and Solubility	95
4.2.3.3	Docking	96
4.2.3.4	Molecular Dynamics Simulations	97
4.2.3.5	Quantum Chemical Methods	99
4.2.4	Role of Solvent	100
4.2.4.1	Hydration of Enzymes	100
4.2.4.2	Enzymes in Organic Solvents	100
4.2.4.3	Solvent-Induced Conformational Changes	101
4.3	De Novo Design of Stable and Functional Proteins	102
4.4	Challenges and Outlook	104
4.4.1	Force Field, System Size, and Simulation Time	104
4.4.2	Enzymes are Nanomachines	105
4.4.3	Outlook	106
	References	107
5	Directed Evolution of Enzymes	119
	<i>Manfred T. Reetz</i>	
5.1	Purpose of Directed Evolution	119

5.2	Short History of Directed Evolution	119
5.3	Basic Principles and Challenges	121
5.4	Gene Mutagenesis Methods	122
5.4.1	Whole Gene Methods	122
5.4.2	Saturation Mutagenesis	128
5.4.3	Recombinant Methods	135
5.4.4	Other Methods	139
5.5	Strategies for Applying Gene Mutagenesis Methods	140
5.5.1	General Guidelines	140
5.5.2	Rare but Helpful Comparative Studies	143
5.5.3	Computational Guides	149
5.6	Screening Versus Selection	152
5.7	Engineering Enzyme Stability	156
5.8	Engineering Enzyme Stereoselectivity	160
5.8.1	General Remarks	160
5.8.2	Hydrolases	161
5.8.2.1	Nitrilase from an Environmental Sample	161
5.8.2.2	Epoxide Hydrolase from <i>Aspergillus niger</i>	161
5.8.2.3	Esterase from <i>Bacillus subtilis</i>	166
5.8.3	Oxidases	167
5.8.3.1	Monoamine Oxidase from <i>Aspergillus niger</i>	167
5.8.3.2	Baeyer–Villiger Monooxygenases	168
5.8.3.3	Cytochrome P450 Monooxygenases	170
5.8.4	Reductases	170
5.8.4.1	β -Keto Ester Reductase from <i>Penicillium citrinum</i>	170
5.8.4.2	Ketoreductase from an Environmental Sample	171
5.8.4.3	Enoate-Reductase YqjM	171
5.8.5	C–C Bond-Forming Enzymes	172
5.8.5.1	Aldolases	172
5.8.5.2	Benzoylformate Decarboxylase from <i>Pseudomonas putida</i>	173
5.9	Summary and Outlook	174
	References	175

6 Production and Isolation of Enzymes 191

Yoshihiko Hirose

6.1	Introduction	191
6.2	Enzyme Suppliers for Biotransformation	194
6.3	Origins of Enzymes	194
6.3.1	Microbial Enzymes	194
6.3.2	Plant Enzymes	195
6.3.3	Animal Enzymes	196
6.4	Fermentation of Enzymes	196
6.4.1	Liquid Fermentation	196
6.4.2	Solid Fermentation	196
6.4.3	Extraction of Enzymes	197

6.5	Extraction of Enzymes	197
6.5.1	Microbial Enzymes	197
6.5.2	Plant Enzymes	198
6.5.3	Animal Enzymes	198
6.6	Concentration	198
6.7	Purification of Enzymes	199
6.7.1	Chromatography	199
6.7.1.1	Ion-Exchange Chromatography (IEX)	199
6.7.1.2	Hydrophobic Interaction Chromatography (HIC)	203
6.7.1.3	Gel Filtration (GF)	206
6.7.1.4	Reversed-Phase Chromatography	207
6.7.1.5	Hydrogen Bond Chromatography	208
6.7.1.6	Affinity Chromatography	209
6.7.1.7	Salting-Out Chromatography	211
6.7.2	Precipitation	211
6.7.2.1	Precipitation by Salting Out	211
6.7.2.2	Precipitation by Organic Solvents	212
6.7.2.3	Precipitation by Changing pH	212
6.7.2.4	Precipitation by Water-Soluble Polymer	212
6.7.3	Crystallization	212
6.7.4	Stabilization During Purification	213
6.7.5	Storage of Enzymes	213
6.7.5.1	Storage in Liquids	213
6.7.5.2	Storage in Solids	213
6.8	Commercial Biocatalysts	214
	References	214
7	Reaction and Process Engineering	217
	<i>John M. Woodley</i>	
7.1	Introduction	217
7.1.1	Scope and Background	217
7.1.2	Role of Reaction Engineering	218
7.1.3	Applications	219
7.2	Reactor Options and Characteristics	219
7.2.1	Introduction	219
7.2.2	Ideal Reactor Types	220
7.2.3	Use of Multiple Reactors	223
7.2.4	Addition of Reagents	223
7.2.5	Alternative Reactors for Insoluble Enzymes	225
7.2.6	Alternative Reactors for Soluble Enzymes	225
7.2.7	Reactors for use with Multiphasic Systems	227
7.2.8	Reactor Scale-Up	228
7.3	Downstream Processing and Product Recovery	229
7.3.1	Downstream Schemes	229
7.3.2	Biocatalyst Recovery	230

7.4	Process Operation	231
7.4.1	Control of Operating Parameters	231
7.4.2	Reaction Control	231
7.5	Process Intensification	232
7.5.1	Process Metrics Required for an Effective Process	232
7.5.2	Intensification Methods	234
7.5.2.1	Enzyme Immobilization	234
7.5.2.2	Use of Organic Solvents	235
7.5.2.3	Use of Resins	235
7.5.2.4	<i>In Situ</i> Product Removal	235
7.6	Process Intensification	236
7.6.1	Introduction	236
7.6.2	Process Simulation	236
7.6.3	Environmental Assessment Tools	237
7.6.4	Operating Windows	238
7.6.5	Sensitivity and Uncertainty Analysis	238
7.6.6	Parameter Estimation	239
7.7	Summary and Outlook	241
	References	242
Part II	Hydrolysis and Formation of C–O Bonds	249
8	Hydrolysis and Formation of Carboxylic Acid Esters	251
	<i>Monica Paravidino, Philipp Böhm, Harald Gröger, and Ulf Hanefeld</i>	
8.1	Introduction	251
8.1.1	How Do Esterases (Lipases) Work?	251
8.1.2	Ester Synthesis versus Ester Hydrolysis	255
8.1.2.1	Ester Synthesis – Reactions in Organic Solvents	256
8.1.3	Stereochemistry	258
8.1.4	Reaction Concepts	262
8.2	Enantioselective Hydrolysis of Racemic Acyclic Carboxylates (Resolutions)	265
8.2.1	Overview	265
8.2.2	Carboxylates with a Chiral Acid Moiety	265
8.2.2.1	Resolution of Carboxylates with a Non-functionalized Stereogenic Center at the α -Position	266
8.2.2.2	Resolution of Carboxylates with an Amino-Functionalized Stereogenic Center at the α -Position	270
8.2.2.3	Resolution of Carboxylates with a Hydroxy-(or oxo-)Functionalized Stereogenic Center at the α -Position	273
8.2.2.4	Resolution of Carboxylates with Two Heteroatom-Substituted Stereogenic Centers at the α,β -Positions	275
8.2.2.5	Resolution of Carboxylates with an Amino-Functionalized Stereogenic Center at the β -Position	276

8.2.2.6	Resolution of Carboxylates with a Hydroxy-(or oxo-) Functionalized Stereogenic Center at the β -Position	280
8.2.2.7	Resolution of Carboxylates with a Stereogenic Heteroatom Center at the β -Position	282
8.2.2.8	Resolution of Carboxylates with a Remote Stereogenic Center	282
8.2.2.9	Resolution of Carboxylates with Axial and Planar Chirality	283
8.2.3	Carboxylates with a Chiral Alcohol Moiety	284
8.2.3.1	Resolution of Esters with a Chiral Alcohol Moiety (Non-heteroatom Functionalized)	285
8.2.3.2	Resolution of Esters with a Heteroatom Functionalized Chiral Alcohol Moiety	286
8.2.3.3	Resolution of Esters with a Remote Stereogenic Center at the Alcohol Moiety	289
8.2.3.4	Resolution of Esters with Axial Chirality at the Alcohol Moiety	291
8.3	Enantioselective Hydrolysis of Prochiral and <i>meso</i> -Carboxylates (Desymmetrization)	292
8.3.1	Overview	292
8.3.2	Hydrolysis of Prochiral Carboxylates	293
8.3.3	Hydrolysis of <i>meso</i> -Carboxylates	296
8.4	Other Stereoselective and Non-stereoselective Hydrolysis of Acyclic Carboxylates	298
8.5	Enantioselective Hydrolysis of Cyclic Esters (Lactones) and Derivatives Thereof	299
8.5.1	Resolution of Lactones	300
8.5.2	Resolution of Azlactones	301
8.5.3	Resolution of Thiazolin-5-ones	302
8.6	Enantioselective Formation of Carboxylates via Esterification	302
8.6.1	Overview	302
8.6.2	Resolution of <i>rac</i> -Alcohols	302
8.6.2.1	Enzymatic Resolution of Primary Alcohols	304
8.6.2.2	Enzymatic Resolution of Secondary Alcohols	314
8.6.2.3	Enzymatic Resolution of Tertiary Alcohols	327
8.6.2.4	Enzymatic Resolution of <i>rac</i> -Diols	327
8.6.2.5	Enzymatic Resolution of <i>rac</i> -Acids and <i>rac</i> -Esters	334
8.6.2.6	Enzymatic Resolution of <i>rac</i> -Acids and <i>rac</i> -Esters with a Stereocenter at the α Position	334
8.6.2.7	Enzymatic Resolution of <i>rac</i> -Acids and <i>rac</i> -Esters with a Stereocenter at the β -Position	337
8.6.3	Desymmetrization of Prochiral and <i>meso</i> -Carboxylates via Transesterification	337
8.7	Enantioselective Formation of Carboxylates from Prochiral and <i>meso</i> -Diols (Desymmetrization via Acylation)	339
8.7.1	Overview	339
8.7.2	Desymmetrization of Prochiral Diols	339
8.7.2.1	Desymmetrization of 2-Substituted 1,3-Diols	340

8.7.2.2	Desymmetrization of 2,2-Disubstituted 1,3-Diols	342
8.7.2.3	Desymmetrization of 1,3,5-Triol Derivatives	344
8.7.3	Desymmetrization of <i>meso</i> -Diols	345
8.7.3.1	Desymmetrization of Primary Cyclic <i>meso</i> -Diols	345
8.7.4	Desymmetrization of Secondary Cyclic <i>meso</i> -Diols	348
8.8	Non-stereoselective Formation of (Fatty Acid-Based) Esters	350
	References	351
9	Hydrolysis and Formation of Epoxides	363
	<i>Jeffrey H. Lutje Spelberg and Erik J. de Vries</i>	
9.1	Introduction	363
9.1.1	Biocatalytic Strategies Towards Optically Pure Epoxides and Derivatives	365
9.1.1.1	Epoxide Conjugation	365
9.1.1.2	Oxidation of Alkenes	366
9.1.1.3	Alcohol Dehydrogenases	366
9.1.1.4	Hydrolases and Other Enzymes Acting on an Ancillary Functional Group	367
9.1.2	Scope and Outline of this Chapter	368
9.2	Conversion and Formation of Epoxides Catalyzed by Halohydrin Dehalogenases	369
9.2.1	Classification, Structure, and Mechanism of Halohydrin Dehalogenases	369
9.2.2	Discovery of Halohydrin Dehalogenases	371
9.2.3	Ring-Closure Reactions	373
9.2.3.1	Production of Chiral C ₃ Building Blocks Through Ring Closure	373
9.2.3.2	Production of Aromatic Building Blocks Through Ring Closure	375
9.2.4	Ring-Opening Reactions	376
9.2.5	Improving Halohydrin Dehalogenases by Mutagenesis and Evolution	381
9.2.6	Towards 100% Yield	383
9.2.7	Cascade Reactions Using Multiple Enzymes	384
9.2.7.1	Haloperoxidase and Halohydrin Dehalogenase	384
9.2.7.2	Halohydrin Dehalogenase and Epoxide Hydrolase	385
9.2.7.3	Alcohol Dehydrogenase and Halohydrin Dehalogenase	386
9.2.8	Outlook on Halohydrin Dehalogenases	386
9.3	Hydrolysis of Epoxides Catalyzed by Epoxide Hydrolases	388
9.3.1	Epoxide Hydrolases in Nature	388
9.3.2	Discovery of Novel Microbial Epoxide Hydrolase Activity	389
9.3.3	Structure and Mechanism of Microbial Epoxide Hydrolases	390
9.3.4	Practical Application of Epoxide Hydrolases to the Synthesis of Chiral Epoxides and Diols	391
9.3.5	Reaction Engineering	398
9.3.6	Improving Epoxide Hydrolases by Mutagenesis and Evolution	400
9.3.6.1	Epoxide Hydrolase Assays	401

- 9.3.7 Towards 100% Yield 403
- 9.3.7.1 Enantioconvergent Reactions Catalyzed by a Single Enzyme 403
- 9.3.7.2 Enantioconvergent Reactions by Employing Two Enzymes 404
- 9.3.7.3 Enantioconvergent Chemoenzymatic Reactions 405
- 9.3.7.4 Conversion of *Meso*-Epoxides 406
- 9.3.8 Outlook on Epoxide Hydrolases 406
- References 408

10 Hydrolysis and Formation of Glycosidic Bonds 417

Daniela Monti and Sergio Riva

- 10.1 Introduction 417
- 10.2 Glycosidases 419
 - 10.2.1 Catalytic Mechanism 420
 - 10.2.1.1 Inverting Glycosidases 420
 - 10.2.1.2 Retaining Glycosidases 421
 - 10.2.2 Glycosidases Inhibitors 421
 - 10.2.3 Synthetic Applications of Glycosidases 421
 - 10.2.3.1 Glycosidase-Catalyzed Hydrolysis of Glycosidic Bonds 422
 - 10.2.3.2 Glycosidases-Catalyzed Formation of Glycosidic Bonds 423
 - 10.2.4 Glycosynthases 427
- 10.3 Glycosyltransferases 428
 - 10.3.1 Glycosyltransferases of the Leloir Pathway 429
 - 10.3.2 Synthesis of Sugar Nucleoside Phosphates 432
 - 10.3.3 Substrate Specificity and Synthetic Applications 438
 - 10.3.4 New Glycosyltransferases from Microbial Sources 448
 - 10.3.5 Non-Leloir Glycosyltransferases 453
 - References 454

11 Addition of Water to C=C Bonds and its Elimination 467

Jianfeng Jin, Isabel W.C.E. Arends, and Ulf Hanefeld

- 11.1 Introduction 467
- 11.2 Addition of Water to Isolated Double Bonds 469
 - 11.2.1 Oleate Hydratase 469
 - 11.2.2 Carotenoid Hydratases 469
 - 11.2.3 Kevitone Hydratase 471
 - 11.2.4 Acetylene Hydratase 471
 - 11.2.5 Diol Dehydratase/Glycerol Dehydratase 472
- 11.3 Addition of Water to Conjugated Double Bonds 473
 - 11.3.1 The Activating Group is an Acid Group 473
 - 11.3.1.1 Fumarase 473
 - 11.3.1.2 Malease and Citraconase 475
 - 11.3.1.3 Aconitase 476
 - 11.3.1.4 Urocanase 476
 - 11.3.1.5 Dihydroxy Acid Dehydratase 477
 - 11.3.1.6 Sugar Dehydratases 478

11.3.1.7	2-Hydroxy-4-Dienoate Hydratases	478
11.3.1.8	Serine and Threonine Dehydratases	482
11.3.1.9	Hydratase-Tautomerase Bifunctionality	483
11.3.2	The Activating Group is a Ketone	484
11.3.2.1	Dehydroquinase	484
11.3.2.2	Scytalone Dehydratase	484
11.3.2.3	1,5-Anhydro-D-Fructose Dehydratase and Aldos-2-Ulose Dehydratase	485
11.3.3	The Activating Group is a Thioester	486
11.3.3.1	Fatty Acid Biosynthesis	486
11.3.3.2	Fatty Acid Degradation, β -Oxidation	489
11.3.3.3	Hydroxycinnamoyl-CoA Hydratase Lyase (HCHL)	491
11.4	Outlook	492
